Introduction

This is a photoelectric liquid level sensor that operates using optical principles. The advantages of this are good sensitivity and no need for mechanical parts - meaning less calibration! The corrosion resistant probe is easily mounted and can handle high temperature and high pressure. The sensor is equipped with an interface adapter for compatibility with the DFRobot "Gravity" interface.
Note: Avoid placing the sensor near bright lights or in direct sunlight as these can cause interference.

Specification

- Model: FS-IR02
- Type: Photoelectric Liquid Level Sensor
- Operating Voltage: 5V DC
- Output Current: 12mA
- Operating Temperature: -25 ~ 105 °C
- Low Level Output: < 0.1 V
- High Level Output: > 4.6 V
- Liquid Level Detection Accuracy: ±0.5 mm
- Material: Polycarbonate
- Measuring Range: No limit
- Life: 50,000 hours

Board Overview

Tutorial
Installation
Requirements

- **Hardware**
  - DFRduino UNO x1
  - Liquid Level Sensor-FS-IR02 x1

- **Software**
  - Arduino IDE [Click to Download Arduino IDE from Arduino®](https://www.arduino.cc/en/Main/Software)
  - https://www.arduino.cc/en/Main/Software

Sample Code
/**************************
2 * Liquid Level Sensor-FS-IR02
3 * *************************************************
4 * This example is to get liquid level
5

13 * ************************************************/
14 int Liquid_level=0;
15 void setup() {
16  Serial.begin(9600);
17  pinMode(5,INPUT);
18 }
19
20 void loop() {
21  Liquid_level=digitalRead(5);
22  Serial.print("Liquid_level= ");Serial.println(Liquid_level,DEC);
23  delay(500);
24 }

Expected Results

When liquid comes in to contact with the sensor probe the microcontroller will output HIGH logic. When the liquid is not in contact with the probe the microcontroller will output LOW logic.

FAQ
