Channel Slider A (pair)

ROB-12559

DESCRIPTION DOCUMENTS

Channel sliders let you achieve precise linear motion with Actobotics channels. The A type channel sliders fully enclose the channel more rigid linear motion applications. There are 12 through-holes on each slider for multiple connection points.

Actobotics is a robotics building system based around extruded aluminum channels, gears, precision shafts, and ball bearings. Thanks to the two standardized hole patterns, nearly all Actobotics components can be intuitively connected together. The wide range of components makes building complex electromechanical prototypes or finished projects a reality.

Is it possible to use this slider on two rails joined end to end? The longest channel is 24" and I need one axis of my xy platform a bit longer. It looks like the end of the channel have a small fillet and I'm worried that the slider would get caught on the lip.
