Description

This solar panel is made of single-crystal material that performs high solar energy transformation efficiency at 17%. It has a fine resin surface and sturdy back suitable for outdoor environments. A 2mm JST connector is attached to the penal, which makes it perfect to team up with most of our can-use-solar-power-supply boards, like Seeeduino microcontroller series, Lipo Rider charging boards series and XBee carrier WSN products series.

The typical open circuit voltage is around 5V, depending on light intensity. In those bright summer days with clear sky and big sun, the peak OC voltage can rush up to 10V. To prevent any damage to boards that accept a narrow range of input voltage, like Lipo Rider, it's recommended to check whether the OC voltage is safe before any connection.

Features

- Dimensions: 137x81x2.5(±0.2) mm
- Typical voltage: 5.5V
- Typical current: 270mA
- Open-circuit voltage: 8.2 V
- Maximum load voltage: 6.4V

Questions and Answers

Have a question about this? Ask people who own it.

Hello. Is it compatible with Li-po Rider? I’m confused because solar panel can produce up to 10V and Li-Po Rider expects 6.5V at maximum!

Vladislav Sergeевич Ross on Oct 19, 2016

Hey, you can’t plug a 10v voltage input to lipo rider, but you can plug solar panel to lipo rider. Because you can’t change the voltage of 10v input power, but the voltage of panel can be adjusted by lipo rider. More information you can refer to the schemat.

Funny English: “take off paint the phenomenon, such as a hole does not allow to have the deviation”. I have no idea what that could even mean originally. But the actual question I have: How thick is this? It looks thin, but can “thin” be qualified?

Harald Kubota on Oct 19, 2016

As a local Chinese, I think the original meaning is “The painting will never fade, and joints are pretty durable.” Thanks for Google translation tool and Kingsoft Power word icons on our computers. P.S: I think I benefit from these machine translat.
