178.5~240W Constant Current Mode LED Driver ELG-240-C series

**Features**
- Constant Current mode output
- Metal housing design with functional Ground
- Built-in active PFC function
- No load / Standby power consumption <0.5W
- IP67 / IP65 rating for indoor or outdoor installations
- Function options: output adjustable via potentiometer;
  3 in 1 dimming (dim-to-off); Smart timer dimming; DALI
- Typical lifetime>50000 hours
- 5 years warranty

**Description**
ELG-240-C series is a 240W LED AC/DC driver featuring the constant current mode and high voltage output. ELG-240-C operates from 100-305VAC and offers models with different rated current ranging between 700mA and 2100mA. Thanks to the high efficiency up to 93%, with the fanless design, the entire series is able to operate for -40°C~+85°C case temperature under free air convection. The design of metal housing and IP67/IP65 ingress protection level allows this series to fit both indoor and outdoor applications. ELG-240-C is equipped with various function options, such as dimming methodologies, so as to provide the optimal design flexibility for LED lighting system.

**Model Encoding**

```
ELG - 240 - C1750 [A - ]
```

- **Input wiring type**: Blank: 2-wire input for standard model
- **Function options**: 3Y: 3-wire input for standard model
- **Rated output current (700/1050/1400/1750/2100mA)**
- **Output wattage**
- **Series name**

</table>

#### NOTE

1. All parameters NOT specially mentioned are measured at 230VAC input, rated current and 25℃ of ambient temperature.
2. Please refer to "DRIVING METHODS OF LED MODULE" section.
3. Derating may be needed under lower input voltages. Please refer to "STATIC CHARACTERISTIC" sections for details.
4. Length of setup time is measured at first cold start. Turning ON/OFF the power supply may lead to increase of the setup time.
5. The driver is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.
6. This series meets the typical life expectancy of >50,000 hours of operation when Tcase, particularly 85℃ point (or Tmp, per DLC), is about 80℃ or less.
8. The ambient temperature derating of 3.5%/100℃ with fanless models and of 5%/100℃ with fans for models operating altitude higher than 2000m (6500ft).
9. For any application note and IP water proof function installation caution, please refer our user manual before using.

This series works in constant current mode to directly drive the LEDs.

In the constant current region, the highest voltage at the output of the driver depends on the configuration of the end systems. Should there be any compatibility issues, please contact MEAN WELL.
**DIMMING OPERATION**

* 3 in 1 dimming function (for B/AB-Type)

- Output constant current level can be adjusted by applying one of the three methodologies between DIM+ and DIM-:
  - 0 ~ 10VDC, or 10V PWM signal or resistance.
- Direct connecting to LEDs is suggested. It is not suitable to be used with additional drivers.
- Dimming source current from power supply: 100 μA (typ.)

1. **Applying additive 0 ~ 10VDC**

   ![Additive Voltage Diagram]

   *DO NOT connect "DIM- to Vo-*

2. **Applying additive 10V PWM signal (frequency range 100Hz ~ 3KHz):**

   ![Additive PWM signal Diagram]

   *DO NOT connect "DIM- to Vo-*

3. **Applying additive resistance:**

   ![Additive Resistance Diagram]

   *DO NOT connect "DIM- to Vo-*

**Note:**
1. Min. dimming level is about 8% and the output current is not defined when 0% < Iout < 8%.
2. The output current could drop down to 0% when dimming input is about 0kΩ or 0Vdc, or 10V PWM signal with 0% duty cycle.
**DALI Interface (primary side; for DA-Type)**
- Apply DALI signal between DA+ and DA-.
- DALI protocol comprises 16 groups and 64 addresses.
- First step is fixed at 8% of output.

**Smart timer dimming function (for Dxx-Type by User definition)**
MEAN WELL Smart timer dimming primarily provides the adaptive proportion dimming profile for the output constant current level to perform up to 14 consecutive hours. 3 dimming profiles hereunder are defined accounting for the most frequently seen applications. If other options may be needed, please contact MEAN WELL for details.

Ex: ◊ D01-Type: the profile recommended for residential lighting

```
<table>
<thead>
<tr>
<th>Time (HH:MM)</th>
<th>Level (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>06:00</td>
<td>100%</td>
</tr>
<tr>
<td>07:00</td>
<td>70%</td>
</tr>
<tr>
<td>08:00</td>
<td>50%</td>
</tr>
<tr>
<td>11:00</td>
<td>70%</td>
</tr>
</tbody>
</table>
```

Ex: ◊ D02-Type: the profile recommended for street lighting

```
<table>
<thead>
<tr>
<th>Time (HH:MM)</th>
<th>Level (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>01:00</td>
<td>50%</td>
</tr>
<tr>
<td>03:00</td>
<td>80%</td>
</tr>
<tr>
<td>08:00</td>
<td>100%</td>
</tr>
<tr>
<td>11:00</td>
<td>60%</td>
</tr>
<tr>
<td>11:30</td>
<td>80%</td>
</tr>
</tbody>
</table>
```

** Notes:**
- TIME matches Operating Time in the diagram whereas LEVEL matches Dimming Level.
- Example: If a residential lighting application adopts D01-Type, when turning on the power supply at 6:00pm, for instance:
  [1] The power supply will switch to the constant current level at 100% starting from 6:00pm.
  [2] The power supply will switch to the constant current level at 70% in turn, starting from 0:00am, which is 06:00 after the power supply turns on.
  [3] The power supply will switch to the constant current level at 50% in turn, starting from 1:00am, which is 07:00 after the power supply turns on.
  [4] The power supply will switch to the constant current level at 70% in turn, starting from 5:00am, which is 11:00 after the power supply turns on.
  The constant current level remains till 8:00am, which is 14:00 after the power supply turns on.

Ex: ◊ D02-Type: the profile recommended for street lighting

```
<table>
<thead>
<tr>
<th>Time (HH:MM)</th>
<th>Level (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>01:00</td>
<td>50%</td>
</tr>
<tr>
<td>03:00</td>
<td>80%</td>
</tr>
<tr>
<td>08:00</td>
<td>100%</td>
</tr>
<tr>
<td>11:00</td>
<td>60%</td>
</tr>
<tr>
<td>11:30</td>
<td>80%</td>
</tr>
</tbody>
</table>
```

** Notes:**
- TIME matches Operating Time in the diagram whereas LEVEL matches Dimming Level.
- Example: If a street lighting application adopts D02-Type, when turning on the power supply at 5:00pm, for instance:
  [1] The power supply will switch to the constant current level at 50% starting from 5:00pm.
  [2] The power supply will switch to the constant current level at 80% in turn, starting from 6:00pm, which is 01:00 after the power supply turns on.
  [3] The power supply will switch to the constant current level at 100% in turn, starting from 8:00pm, which is 03:00 after the power supply turns on.
  [4] The power supply will switch to the constant current level at 60% in turn, starting from 1:00am, which is 08:00 after the power supply turns on.
  [5] The power supply will switch to the constant current level at 80% in turn, starting from 4:00am, which is 11:00 after the power supply turns on. The constant current level remains till 6:30am, which is 14:00 after the power supply turns on.
**Example:** If a tunnel lighting application adopts D03-Type, when turning on the power supply at 4:30pm, for instance:

1. The power supply will switch to the constant current level at 70% starting from 4:30pm.
2. The power supply will switch to the constant current level at 100% in turn, starting from 6:00pm, which is 01:30 after the power supply turns on.
3. The power supply will switch to the constant current level at 70% in turn, starting from 5:00am, which is 11:00 after the power supply turns on.

The constant current level remains till 6:30am, which is 14:00 after the power supply turns on.
ELG-240-C series
