Introduction

LUXEON® is a revolutionary, energy efficient and ultra compact new light source, combining the lifetime and reliability advantages of Light Emitting Diodes with the brightness of conventional lighting.

The LUXEON V Portable, part of the LUXEON V family, delivers white luminous output 100 times brighter than standard small signal LEDs and 4X that of a standard LUXEON.

LUXEON V Portable is designed for portable lighting products such as flashlights, "miner" head-mounted lights, emergency-egress lighting, and other battery-operated applications. This device offers ruggedness, low power consumptions, and lifetimes greater than 50X conventional flashlight sources—over 500 hours compared to the typical 20-hour life for an incandescent bulb.

Features

- Highest Flux LED in the world—50X traditional "5mm" LEDs, and 4X a standard LUXEON.
- 500+ hours operation compared to just 20 hours for typical incandescent flashlight bulbs.
- Extreme Luminous Density—20X the lm/mm² of a standard through hole LED
- More Energy Efficient than Incandescent and most Halogen lamps
- Low voltage DC operated
- Cool beam, safe to the touch
- Instant light (less than 100 ns)
- Fully dimmable
- No UV
- Superior ESD protection
- Uniform angular color uniformity superior to other solid state sources, eliminating color halos within the light beam

Benefits

- Compact low voltage light source for portable lighting applications
- Highly efficient source results in longer battery life
- Solid state technology eliminates fragile filament resulting in extremely rugged designs
- Much longer life than conventional light bulbs enables sealed for life designs
# Table of Contents

- Mechanical Dimensions — Emitter ........................................... 3

Mechanical Dimensions — Emitter

Lambertian - LXHL-PW03

Notes:
1. The anode side of the device is denoted by a hole in the lead frame. Electrical insulation between the case and the board is required—slug of device is not electrically neutral. Do not electrically connect either the anode or cathode to the slug.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.

Side Emitting - LXHL-DW03

Notes:
1. The anode side of the device is denoted by a hole in the lead frame. Electrical insulation between the case and the board is required—slug of device is not electrically neutral. Do not electrically connect either the anode or cathode to the slug.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.
Mechanical Dimensions — Star
Lambertian—LXHL-LW6C   and   Side Emitting—LXHL-FW6C

Notes:
1. Slots in aluminum-core PCB for M3 or #4 mounting screw.
2. Electrical interconnection pads labeled on the aluminum-core PCB with "+" and "-" to denote positive and negative, respectively. All positive pads are interconnected, as are all negative pads, allowing for flexibility in array interconnection.
3. Electrical insulation between neighboring Stars is required — aluminum board is not electrically neutral.
4. Drawings not to scale.
5. All dimensions are in millimeters.

Notes for Table 2:
1. Minimum luminous flux or performance guaranteed within published operating conditions. Philips Lumileds maintains a tolerance of ± 10% on flux measurements.
2. LUXEON types with even higher luminous flux levels will become available in the future. Please consult your Philips Lumileds Authorized Distributor or Philips Lumileds sales representative for more information.
### Electrical Characteristics at 700mA, Junction Temperature, \( T_J = 25^\circ C \)

<td>-4.0</td>
<td>11</td>
</tr>
</tbody>
</table>

**Notes for Table 3:**

1. Philips Lumileds maintains a tolerance of \( \pm 0.06V \) on forward voltage measurements.
2. Dynamic resistance is the inverse of the slope in linear forward voltage model for LEDs. See Figures 3.
3. Measured between \( 25^\circ C \leq T_J \leq 110^\circ C \) at \( I_F = 700mA \).

### Optical Characteristics at 700mA, Junction Temperature, \( T_J = 25^\circ C \)

**Table 4.**

<table>
<thead>
<tr>
<th>Radiation Pattern</th>
<th>Color</th>
<th>Min.</th>
<th>Typ.</th>
<th>Max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lambertian</td>

</tr>
<tr>
<td>Side Emitting</td>
<td>White</td>
<td>4500 K</td>
<td>5500 K</td>
<td>10,000 K</td>
</tr>
</tbody>
</table>

**Notes for Table 4:**

1. CRI (Color Rendering Index) for White product types is 70. Philips Lumileds maintains a \( \pm 5\% \) tester tolerance on CCT.
2. All products built with Indium Gallium Nitride (InGaN).

### Optical Characteristics at 700mA, Junction Temperature, \( T_J = 25^\circ C \), Cont’d

**Table 5.**

<table>
<thead>
<tr>
<th>Radiation Pattern</th>
<th>Color</th>
<th>Total Included Angle ( \theta_{0.90V} ) (^{[4]} )</th>
<th>Viewing Angle ( \theta ) (^{[5]} )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lambertian</td>
<td>White</td>
<td>150</td>
<td>120</td>
</tr>
</tbody>
</table>

**Notes for Table 5:**

1. Total angle at which 90% of total luminous flux is captured.
2. \( \theta_{0.5} \) is the off axis angle from lamp centerline where the luminous intensity is \( \frac{1}{2} \) of the peak value.

### Optical Characteristics at 700mA, Junction Temperature, \( T_J = 25^\circ C \), Cont’d

**Table 6.**

<table>
<thead>
<tr>
<th>Radiation Pattern</th>
<th>Color</th>
<th>Typical total flux percent within first 45° (^{[6]} ) Cum ( \Phi_{45^\circ} )</th>
<th>Typical angle of peak intensity ( \theta ) PEAK</th>
</tr>
</thead>
<tbody>
<tr>
<td>Side Emitting</td>
<td>White</td>
<td>&lt;30%</td>
<td>75° – 85°</td>
</tr>
</tbody>
</table>

**Notes for Table 6:**

1. Cumulative flux percent within \( \pm 45^\circ \) from optical axis.
2. Off axis angle from lamp centerline where the luminous intensity reaches peak off axis value. On axis peak may be higher than off axis peak.

</table>

### Notes for Table 7:

1. Proper current derating must be observed to maintain junction temperature below the maximum. For more information, consult the LUXEON Design Guide, available upon request.
2. LEDs are not designed to be driven in reverse bias. Please consult Philips Lumileds' application brief AB11 for further information.
3. Allowable maximum board temperature to avoid exceeding maximum junction temperature at maximum $V_f$ limit at 700 mA based on thermal resistance of Star assembly.
4. Measured at leads, during lead soldering and slug attach, body temperature must not exceed 120°C. LUXEON emitters cannot be soldered by general IR or Vapor-phase reflow, nor by wave soldering. Lead soldering is limited to selective heating of the leads, such as by hot-bar reflow, fiber focussed IR, or hand soldering. The package back plane (slug) may not be attached by soldering, but rather with a thermally conductive adhesive. Electrical insulation between the slug and the board is required. Please consult Philips Lumileds' Application Brief AB10 on LUXEON Emitter Assembly Information for further details on assembly methods.

### Wavelength Characteristics, $T_J = 25°C$

![Wavelength Characteristics](discontinued)

**Figure 1.** White Color Spectrum of typical CCT part, integrated measurement.
Light Output Characteristics

Forward Current Characteristics, $T_J = 25^\circ$C

Note:
Driving these high power devices at currents less than the test conditions may produce unpredictable results and may be subject to variation in performance. Pulse width modulation (PWM) is recommended for dimming effects.

Figure 2. Relative Photometric Flux vs. Junction Temperature.

Figure 3. Forward Current vs. Forward Voltage.

</tbody>
</table>

Notes for Table 8:
1. LUXEON V Portable is designed primarily for portable lighting and other applications requiring operating lifetimes of 500 hours and less. While the device will operate past 500 hours, its lumen maintenance cannot yet be characterized. Longer life versions of white LUXEON V will become available in the future.
2. Average lumen maintenance is dependent on heat-sink temperature. A recoverable light output loss may occur during the first 500 hours of operation.
3. For additional information please consult your Philips Lumileds Authorized Distributor or Philips Lumileds sales representative.
Notes:
1. LUXEON V emitters should be picked up by the body (not the lens) during placement. The inner diameter of the pick-up collet should be greater than or equal to 6.5 mm. Please consult Philips Lumileds Application Brief AB10 on LUXEON Emitter Assembly Information for further details on assembly methods.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. All dimensions without tolerances are for reference only.
Company Information

LUXEON® is developed, manufactured and marketed by Philips Lumileds Lighting Company. Philips Lumileds is a world-class supplier of Light Emitting Diodes (LEDs) producing billions of LEDs annually. Philips Lumileds is a fully integrated supplier, producing core LED material in all three base colors (Red, Green, Blue) and white. Philips Lumileds has R&D centers in San Jose, California and in The Netherlands and production capabilities in San Jose and Penang, Malaysia. Founded in 1999, Philips Lumileds is the high flux LED technology leader and is dedicated to bridging the gap between solid-state LED technology and the lighting world. Philips Lumileds technology, LEDs and systems are enabling new applications and markets in the lighting world.

Philips Lumileds may make process or materials changes affecting the performance or other characteristics of our products. These products supplied after such changes will continue to meet published specifications, but may not be identical to products supplied as samples or under prior orders.
