The MiCS-5524 is a compact MOS sensor.

The MiCS-5524 is a robust MEMS sensor for indoor carbon monoxide and natural gas leakage detection; suitable also for indoor air quality monitoring; breath checker and early fire detection.

**Features**
- Smallest footprint for compact designs (5 x 7 x 1.55 mm)
- Robust MEMS sensor for harsh environments
- High-volume manufacturing for low-cost applications
- Short lead-times

**Detectable gases**
- Carbon monoxide  CO  1 – 1000ppm
- Ethanol  C₂H₅OH  10 – 500ppm
- Hydrogen  H₂  1 – 1000ppm
- Ammonia  NH₃  1 – 500ppm
- Methane  CH₄  >1000ppm

Notes:
1. Sensing resistance in air $R₀$ is measured under controlled ambient conditions, i.e. synthetic air at 23 ± 5°C and 50 ± 10% RH. Sampling test.
2. Sensitivity factor is defined as $Rₛ$ in air divided by $Rₛ$ at 60 ppm CO. Test conditions are 23 ± 5°C and 50 ± 10% RH. Indicative values only. Sampling test.

IMPORTANT PRECAUTIONS:
Read the following instructions carefully before using the MiCS-5524 described here to avoid erroneous readings and to prevent the device from permanent damage.

- The sensor must be reflow soldered in a neutral atmosphere, without soldering flux vapours.
- The sensor must not be exposed to high concentrations of organic solvents, silicone vapours or cigarette-smoke in order to avoid poisoning the sensitive layer.
- Heater voltage above the specified maximum rating will destroy the sensor due to overheating.
- This sensor is to be placed in a filtered package that protects it against water and dust projections.
- SGX sensortech strongly recommends using ESD protection equipment to handle the sensor.
MiCS-5524 with recommended supply circuit (top view)

R is a 82 Ω. This resistor is necessary to obtain the right temperature on the heater while using a single 5V power supply. The resulting voltage is typically $V_H = 2.4\text{V}$.

MiCS-5524 with measurement circuit (top view)

The voltage measured on the load resistor is directly linked to the resistance of the sensor respectively. $R_{LOAD}$ must be 820 Ω at the lowest in order not to damage the sensitive layer.

Package outline dimensions
The package is compatible with SMD assembly process.

Sensor configuration
The silicon gas sensor structure consists of an accurately micro machined diaphragm with an embedded heating resistor and the sensing layer on top. The internal connections are shown above.
Packaging
The sensors are packaged in a tape and reel for expedition.
The sensors are placed in a carrier type. The dimensions of the cavity are 5.5 x 7.5 x 2.55 mm (the tolerance is +/- 0.2 mm).
The outside dimension of the reel is either 178 + - mm (for a maximum of 700 sensors ) or 330 + 0.25 / -4 mm (for a maximum of 2000 sensors).
