RI-01B Series

Micro dry-reed switch hermetically sealed in a gas-filled envelope. Single-pole, single-throw (SPST) type, having normally open contacts, and containing two magnetically actuated reeds.

The switch is of the double-ended type and may be actuated by an electro-magnet, a permanent magnet or combination of both. The device is intended for use in sensors, relays, pulse counters or similar devices.

RI-01B Series Features

▪ Ideal for general purpose reed relays and sensors.
▪ Contact layers: gold, sputtered ruthenium
▪ Superior glass-to-metal seal and blade alignment
▪ RoHS Compliant

General data for all models RI-01B

AT-Customization / Performed Leads

Besides the standard models, customized products can also be supplied offering the following options:
▪ Operate and release ranges to customer specification
▪ Cropped and/or performed leads

Coils

All characteristics are measured using the Philips Standard Coil. For definitions of the Philips Standard Coil, refer to "Application Notes" in the Reed Switch Technical & Application Information Section of this catalog.

Life expectancy and reliability

The life expectancy data given below are valid for a coil energized at 1.25 times the published maximum operate value for each type in the RI-01B series.

No load conditions (operating frequency: 100Hz)

Life expectancy: min. $10^8$ operations with a failure rate of less than $10^{-9}$ with a confidence level of 90%.

End of life criteria:
- Contact resistance $> 1\Omega$ after 2 ms

Release time $> 2$ ms (latching or contact sticking).

Loaded conditions (resistive load: 12 V; 4 mA; (15 mA peak); operating frequency: 170Hz)

Life expectancy: min. $10^6$ operations.

End of life criteria:
- Contact resistance $> 2\Omega$ after 4 ms
- Release time $> 0.7$ ms (latching or contact sticking).

Switching different loads involves different life expectancy and reliability data. Further information is available on request.

Mechanical Data

Contact arrangement is normally open; lead finish is tinned; net mass is approximately 190mg; and can be mounted in any position.

Shock

The switches are tested in accordance with "IEC 68-2-27", test Ea (peak acceleration 150 G; half sinewave; duration 11ms). Such a shock will not cause an open switch (no magnetic field present) to close, nor a switch kept closed by an 80 AT coil to open.

*The Contact Resistance is measured using the Kelvin Method next to the glass body.*

## Vibration

The switches are tested in accordance with “IEC 68-2-6”, test Fc (acceleration 10G; below cross-over-frequency 57 to 62 Hz; amplitude 0.75 mm; frequency range 10 to 2000 Hz; duration 90 minutes.) Such a vibration will not cause an open switch (no magnetic field present) to close, nor a switch kept closed by an 80 AT coil to open.

## Mechanical Strength

The robustness of the terminations is tested in accordance with “IEC 68-2-21”, test Ua1 (load 40 N).

## Operating and Storage Temperature

Operating ambient temperature; min: -55°C; max: +125°C. Storage temperature; min: -55°; max: +125°. Note: Temperature excursions up to 150°C may be permissible. For more information contact your nearest Comus Group sales office.

## Soldering

The switch can withstand soldering heat in accordance with “IEC 68-2-20”, test Tb, method 1B: solder bath at 350 ± 10°C for 3.5 ± 0.5 s. Solderability is tested in accordance with “IEC 68-2-20” test Ta, method 3: solder globule temperature 235°C; ageing 1b: 4 hours steam.

## Mounting

The leads should not be bent closer than 1 mm to the glass-to-metal seals. Stress on the seals should be avoided. Care must be taken to prevent stray magnetic fields from influencing the operating and measuring conditions.

## Welding

The leads can be welded.
