31580 Series Low Shackle Hermetic Thermostats

Actual product appearance may vary.

Description

The 31580 Series consists of a single pole, single throw switch activated by a cam-action internal disc. Temperature calibrations are preset at the factory and each is 100% thermally and mechanically inspected. It is available to open or close on temperature rise. The case is later welded to form a hermetically-sealed steel housing with a glass-to-metal seal at the terminal junction. The low shackle and compact design often make it especially well suited for applications that require miniaturization. They have gold leaf contacts for low voltage applications.

Features

- Hermetically sealed
- Tight tolerances
- Tight differential
- Low profile

Potential Applications

- Industrial
- Food service
- Telecom
- Medical
- Inhibitor
