SMT Power Inductors
Shielded Drum Core - PA4337.XXXNLT Series

- Height: 4.5mm Max
- Footprint: 6.3mm x 6.3mm Max
- Current Rating: up to 6.5A
- Inductance Range: 0.47μH to 1500μH
- Shielded magnetic circuit reduces leakage flux, Fe base metal core enables high saturation and metalized core termination results in excellent shock resistance.

### Electrical Specifications @ 25°C - Operating Temperature -40°C to +125°C

### Notes:
1. Actual temperature of the component during system operation (ambient plus temperature rise) must be within the standard operating range.
2. The saturation current is the current at which the initial inductance drops approximately 30% at the stated ambient temperature. This current is determined by placing the component in the specified ambient environment and applying a short duration pulse current (to eliminate self-heating effect) to the component.
3. The Rated Current is the DC current required to raise the component temperature by 40 °C maximum. Take note that the component’s performance varies depending on the system condition. It is suggested that the component be tested at the system level, to verify the temperature rise of the component during system operation.
