Looking to improve the printing bed on your Micro 3D printer? Check out the PRINTinZ Skin for M3D!

The PRINTinZ Skin is a peel and stick surface for 3D printer beds made from the same durable material as the outer layers of the Plate. It's the perfect option for those who prefer printing on a non-flexible printer bed. PRINTinz Skins can hold up to plenty of scraping and sanding and retain their adhesion properties indefinitely.

PRINTinZ products were developed to be a superior alternative to the print surfacers being used on consumer 3D printers. If you've spent any time using a fused filament type of machine like our Printrbots, then you understand the demands on the print surface. The PRINTinZ Skin works with all of our PLA and ABS filaments.
Strong adhesion
Clean Removal of 3D prints
Excellent surface finish
Long-lasting durability
