**CORE SKILL: ELECTRICAL PROTOTYPING**

If it requires power, you need to know how much, what all the pins do, and how to hook it up. You may need to reference datasheets, schematics, and know the ins and outs of electronics.

**Skill Level: Noob** - You don't need to reference a datasheet, but you will need to know basic power requirements.

Radio Shack never has these in stock, amazon is insanely expensive, and in all honesty I had a hard time finding them anywhere else. Run the dead-on RTC well when powered off. Have lost less than 5 seconds in almost a month now. Good power is the first key to this.

Dead on arrival.

I just ordered 6 of these, and the first one I tried is dead on arrival.
