RGB Color Light Sensor
Surface - Mount
EACLSST3227A2/ EACLSST3227A1/
EACLSST3227A0

Features
• Surface-mount plastic package
• High sensitivity for Red, Green, and Blue light source
  EACLSST3227A2 (λp= 620nm, Red)
  EACLSST3227A1 (λp= 550nm, Green)
  EACLSST3227A0 (λp= 470nm, Blue)
• Good stable analog output with temperature shift
• Size: 3.2mm (L)*2.7mm (W)*1.1mm (H)
• Operating temperature performance, -40°C to 85°C
• Active area: 1.8 mm²
• RoHS compliant and Pb free package
• Compliance with EU REACH.

Description
EACLSST3227 series color sensor device is one channel Si photodiode sensitivity to Red, Green and Blue region spectrum in miniature SMD package. Everlight Americas color sensor series product is the good effective and low cost solution to white color balance, color detection and color management applications.

Applications
• Color adjustment for LED back light system
• Color adjustment for LED projector
• Color detection
• White balance adjustment
• Consumer and mobile appliances
Package Dimensions

Notes:
1. All dimensions are in millimeters
2. Tolerances unless dimensions ±0.1mm

Recommended method of storage

Reflow Terms: JEDEC Level 4 Specification

Dry box storage is recommended as soon as the aluminum bag has been opened to prevent moisture absorption. The following conditions should be observed, if dry boxes are not available:

- Storage temperature 10 °C to 30 °C
- Storage humidity ≤ 60%RH max

After more than 72 hours under these conditions moisture content will be too high for Reflow soldering. In case of moisture absorption, the devices will recover to former condition by drying under the following condition:

- 192 hours at 40 °C +5°C/-0°C and 5%RH (dry air / nitrogen), or
- 96 hours at 60 °C +5°C and < 5%RH for all device containers, or
- 24 hours at 125 °C +5°C not suitable for reel or tubes

ESD Precaution

Proper storage and handling procedures should be followed to prevent ESD damage to the devices especially when they are removed from the Anti-static bag. Electro-Static Sensitive Devices warning labels are on the packing.

Recommended Solder Profile

Notice:

1. Reflow soldering should not be done more than two times.
2. When soldering, do not put stress on the devices during heating.
3. After soldering, do not warp the circuit board.
**Soldering Iron**

Each terminal is to go to the tip of soldering iron temperature less than 350°C for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

**Repairing**

Repair should not be done after the device have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the device will or will not be damaged by repairing.
