NetworkAIR AFX Features & Benefits

Economy

Dedicated dehumidification

Boosts system efficiency by adding latent capacity without overcooling or increasing the requirement for reheat (N/A chilled water systems).

Protection

Air filtration

Removes dirt and other particulates from the intake air for cleaner supply air.

Manageability

Microprocessor controller

Provides proactive control and real-time monitoring via a four line, eighty character, alphanumeric display.

Serviceability

Front service access

The system has full service, front access for routine servicing of components. Front access also narrows the footprint of the system making it possible for units to be placed side by side.

Availability

Steam humidifier

Humidity is managed through a self-contained steam canister humidifier for maximum efficiency and ease of maintenance. The pure-steam canister maintains consistent capacity output, and requires very little scheduled maintenance.

Scroll compressors

Utilize few moving parts for increased reliability and life expectancy.
