Data sheet acquired from Harris Semiconductor
SCHS085E – Revised September 2003

CMOS Programmable Timer High Voltage Types (20V Rating)

Features

- **Low Symmetrical Output Resistance, Typically 100Ω at V_{DD} = 15V**
- **Built-In Low-Power RC Oscillator**
- **Oscillator Frequency Range . . . . DC to 100kHz**
- **External Clock (Applied to Pin 3) can be Used Instead of Oscillator**
- **Operates as 2^N Frequency Divider or as a Single-Transition Timer**
- **Q/$\overline{Q}$ Select Provides Output Logic Level Flexibility**
- **AUTO or MASTER RESET Disables Oscillator During Reset to Reduce Power Dissipation**
- **Operates With Very Slow Clock Rise and Fall Times**
- **Capable of Driving Six Low Power TTL Loads, Three Low-Power Schottky Loads, or Six HTL Loads Over the Rated Temperature Range**
- **Symmetrical Output Characteristics**
- **100% Tested for Quiescent Current at 20V**
- **5V, 10V, and 15V Parametric Ratings**
- **Meets All Requirements of JEDEC Standard No. 13B, "Standard Specifications for Description of 'B' Series CMOS Devices"**

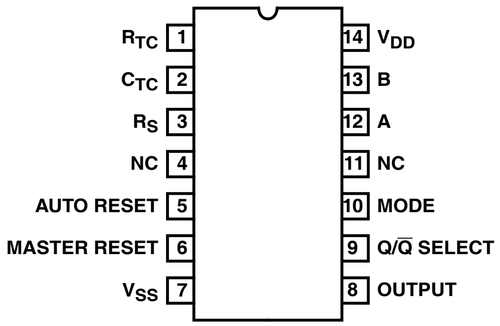
Description

CD4541B programmable timer consists of a 16-stage binary counter, an oscillator that is controlled by external R-C components (2 resistors and a capacitor), an automatic power-on reset circuit, and output control logic. The counter increments on positive-edge clock transitions and can also be reset via the MASTER RESET input.

Pinout

CD4541B
(CERDIP, PDIP, SOIC, SOP, TSSOP)

TOP VIEW



The output from this timer is the Q or $\overline{Q}$ output from the 8th, 10th, 13th, or 16th counter stage. The desired stage is chosen using time-select inputs A and B (see Frequency Select Table).

The output is available in either of two modes selectable via the MODE input, pin 10 (see Truth Table). When this MODE input is a logic "1", the output will be a continuous square wave having a frequency equal to the oscillator frequency divided by 2^N. With the MODE input set to logic "0" and after a MASTER RESET is initiated, the output (assuming Q output has been selected) changes from a low to a high state after 2^{N-1} counts and remains in that state until another MASTER RESET pulse is applied or the MODE input is set to a logic "1".

Timing is initialized by setting the AUTO RESET input (pin 5) to logic "0" and turning power on. If pin 5 is set to logic "1", the AUTO RESET circuit is disabled and counting will not start until after a positive MASTER RESET pulse is applied and returns to a low level. The AUTO RESET consumes an appreciable amount of power and should not be used if low-power operation is desired. For reliable automatic power-on reset, V_{DD} should be greater than 5V.

The RC oscillator, shown in Figure 2, oscillates with a frequency determined by the RC network and is calculated using:

$$f = \frac{1}{2.3\ R_{TC}C_{TC}}$$

Where f is between 1kHz and 100kHz and $R_S \geq 10k\Omega$ and $\approx 2R_{TC}$

Ordering Information

PART NUMBER	TEMP. RANGE (^oC)	PACKAGE
CD4541BF3A	-55 to 125	14 Ld CERDIP
CD4541BE	-55 to 125	14 Ld PDIP
CD4541BM	-55 to 125	14 Ld SOIC
CD4541BMT	-55 to 125	14 Ld SOIC
CD4541BM96	-55 to 125	14 Ld SOIC
CD4541BNSR	-55 to 125	14 Ld SOP
CD4541BPW	-55 to 125	14 Ld TSSOP
CD4541BPWR	-55 to 125	14 Ld TSSOP

NOTE: When ordering, use the entire part number. The suffixes 96 and R denote tape and reel. The suffix T denotes a small-quantity reel of 250.

CAUTION: These devices are sensitive to electrostatic discharge. Users should follow proper IC Handling Procedures.

Absolute Maximum Ratings

DC Supply - Voltage Range, V_{DD}
Voltages Referenced to V_{SS} Terminal . . . . -0.5V to +20V
Input Voltage Range, All Inputs . . . . -0.5V to V_{DD} +0.5V
DC Input Current, Any One Input . . . . ±10mA
Device Dissipation Per Output Transistor
For T_A = Full Package Temperature Range
(All Package Types) 100mW

Operating Conditions

Temperature Range T_A . . . . -55°C to 125°C
Supply Voltage Range
For T_A = Full Package Temperature Range . . . . . 3V (Min), 18V (Typ)

Thermal Information

Package Thermal Impedance, θ_{JA} (see Note 1)
PDIP package . . . . 80°C/W
SOIC package . . . . 86°C/W
SOP package . . . . 76°C/W
TSSOP package . . . . 113°C/W
Maximum Junction Temperature (Plastic Package) . . . . 150°C
Maximum Storage Temperature Range (T_{STG}) . . . -65°C to 150°C
Maximum Lead Temperature (Soldering 10s)
At Distance 1/16in ± 1/32in (1.59mm ±0.79mm)
from case for 10s Maximum . . . . 265°C
(SOIC - Lead Tips Only)

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTE:

1. The package thermal impedance is calculated in accordance with JESD 51-7.

Digital Timer Application

A positive pulse on MASTER RESET resets the counters and latch. The output goes high and remains high until the number of pulses, selected by A and B, are counted. This circuit is retriggerable and is as accurate as the input frequency. If additional accuracy is desired, an external clock can be used on pin 3. A setup time equal to the width of the one-shot output is required immediately following initial power up, during which time the output will be high.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

[4] There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

[5] Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

[6] Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
