DDR4-2133 ECC-DIMM

DDR4-2133

ECC Unbuffered Memory

CL=15

Stability and reliability are critical for both servers and workstations. Transcend's DDR4 ECC Unbuffered DIMMs are fully compatible with the Intel® Xeon® E5-2600 v3 family of processors ("Haswell-EP") and feature Error Correcting Code, which monitors data being transferred in and out of memory and corrects any errors found. Each module is constructed with top-quality DRAM chips and is rated at 2133MHz, translating into data transmission rates of up to 17GB/s. Operating at a nominal voltage of just 1.2V, Transcend's DDR4 ECC Unbuffered DIMMs reduce electrical load on the memory controller, consuming up to 40% less power than standard 1.5V DDR3 DIMMs.
