Shield - Proto Wireless

Code: **A000064**

The Arduino Wireless Proto Shield is a great way to prototype wireless applications thanks to its XBee(TM) compatible socket.

You can use the wireless module from [Digi](#) to create a network of Arduino boards, solder parts to the prototyping area to create your project.

The shields breaks out each of the XBee's pins to a through-hole solder pad. It also provides female pin headers for all the Arduino pins.

- Requires and Arduino board (not included)
- Operating voltage: 5V (supplied from the Arduino Board)
- Socket for wireless expansion modules

Board comes fully assembled and tested.

If you want to give a closer look to this shield we advise you to visit the official [Wireless Shield page](#) in the Hardware Section.
