Resettable PPTC Datasheet

30R Series Radial Leaded

Rohs 🕅 HF 🔊

Web Resources

Download ECAD models, order samples, and find technical recources at www.littelfuse.com

Description

The 30R Series radial leaded device is designed to provide overcurrent protection for low voltage (≤30V) applications where space is not a concern and resettable protection is preferred.

Features & Benefits

 Cured, flame retardant epoxy polymer insulating material meets UL 94V-0 requirements

Applications

- USB hubs, ports and peripherals
- Computers & peripherals

R min = Minimum resistance of device in initial (un-soldered) state.

typ = Typical resistance of device in initial (un-soldered) state. R _{tmax} = Maximum resistance of device at 20°C measured one hour after tripping.

have no effect on 600R product specifications or performance.

* Effective February 11, 2010 onward, all 600R PTC products will be manufactured Halogen Free (HF). Existing Non-Halogen Free 600R PTC products may continue to be sold, until supplies are depleted. This change will

Motor protection

- Fast time-to-trip
- RoHS compliant, Lead-Free and Halogen-Free*
- General electronics
- Automotive applications

Caution: Operation beyond the specified rating may result in damage and possible arcing and flame

I hold = Hold current: maximum current device will pass without tripping in 20°C still air.

 $\begin{array}{l} {}_{trip} = \text{hold current, maximum current at which the device will pass without tripping in 20 °C still air.} \\ {}_{trip} = \text{Trip current; minimum current at which the device will trip in 20 °C still air.} \\ {}_{vot} = Maximum voltage the device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can withstand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can with stand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can with stand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can with stand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can with stand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can with stand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maximum fault current device can with stand without damage at rated voltage (V_{max}) \\ {}_{max} = \text{Maxim fault$

 $\mathbf{P}_{d}^{\text{max}}$ = Power dissipated from device when in the tripped state at 20°C still air

Warning

Downloaded from Arrow.com.

· Users shall independently assess the suitability of these devices for each of their applications

Operation of these devices beyond the stated maximum ratings could result in damage to the devices and lead to electrical arcing and/or fire

• These devices are intended to protect against the effects of temporary over-current or over-temperature conditions and are not intended to perform as protective devices where such conditions are expected to be repetitive or prolonged in duration

Exposure to silicon-based oils, solvents, electrolytes, acids, and similar materials can adversely affect the performance of these PPTC devices

These devices undergo thermal expansion under fault conditions, and thus shall be provided with adequate space and be protected against mechanical stresses

· Circuits with inductance may generate a voltage (L di/dt) above the rated voltage of the PPTC device

Temperature Rerating

Average Time Current Curves

The average time current curves and Temperature Rerating curve performance is affected by a number or variables, and these curves provided as guidance only. Customer must verify the performance in their application.

Temperature Rerating Curve

Note: Typical Temperature rerating curve, refer to table for derating data

Soldering Parameters - Wave Soldering

| Pre-Heating Zone | Refer to the condition recommended by the flux manufacturer. Max. ramping rate should not exceed 4°C/Sec. |
|------------------|--|
| Soldering Zone | Max. solder temperature should not exceed 260°C. Time within 5°C of actual Max. solder temperature within 3 - 5 seconds. Total time from 25°C room to Max. solder temperature within 5 minutes including Pre- Heating time. |
| Cooling Zone | Cooling by natural convection in air. Max. ramping down rate should not exceed 6°C/ Sec. |

Physical Specifications

| Lead Material | 0.90-1.85A: Tin-plated Copper clad steel 2.50-9.00A: Tin-plated Copper |
|------------------------------|---|
| Soldering Characteristics | Solderability per MIL–STD–202, Method 208 |
| Insulating Material | Cured, flame retardant epoxy polymer meets UL94V-0 requirements. |
| Device Labeling | Marked with 'LF', voltage, current rating, and date code. |

Environmental Specifications

| Operating Temperature | -40°C to +85°C |
|--|--|
| Maximum Device Surface Temperature in Tripped State | 125°C |
| Passive Aging | +85°C, 1000 hours -/+5% typical resistance change |
| Humidity Aging | +85°C, 85% R.H., 1000 hours -/+5% typical resistance change |
| Thermal Shock | +85°C to -40°C 10 times -/+5% typical resistance change |
| Solvent Resistance | MIL–STD–202, Method 215 No change |
| Moisture Resistance Level | Level 1, J-STD-020 |
