

250mA Low Quiescent Current CMOS LDO

DESCRIPTION

TS9011 is a positive voltage regulator developed utilizing CMOS technology featured very low power consumption, low dropout voltage and high output voltage accuracy. Built in low on-resistor provides low dropout voltage and large output current. A 1 μ F or greater can be used as an output capacitor. TS9011 are prevented device failure under the worst operation condition with both thermal shutdown and current fold-back. These series are recommended for configuring portable devices and large current application, respectively.

FEATURES

- Dropout voltage 0.4V (typ.) @ $I_o=250\text{mA}$
- Output current up to 250mA
- Low power consumption, 2 μ A (typ.)
- Output voltage $\pm 2\%$
- Internal current limit
- Thermal shutdown protection
- RoHS Compliant
- Halogen-Free

APPLICATION

- Battery-operated systems
- Microprocessor reset circuitry
- Memory battery back-up circuits
- Power-on reset circuits
- Power failure detection
- System battery life and charge voltage monitors
