Description

RCP-2000 is a 2KW single output rack mountable front end AC/DC power supply with a 1U low profile and a high power density up to 25W/inch^3. This series operates for 90~264VAC input voltage and offers the models with the DC output mostly demanded from the industry. Each model is cooled by the built-in DC fan with fan speed control, working for the temperature up to 70℃. RCP-2000 provides vast design flexibility by equipping various built-in functions such as the PMBus communication protocol, output programming, active current sharing (up to 18000W via three 19″ rack shelves, RKP-1U), remote control, auxiliary power, alarm signal, external control/monitor via the control model RKP-CMU1, etc. Maximum number that can be monitored by master controller in communication shall be 9 power supplies.

NOTE

1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25℃ of ambient temperature.
2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
3. Under parallel operation of more than one rack connecting together, ripple of the output voltage may be higher than the SPEC at light load condition. It will go back to normal ripple level once the output load is more than 10%.
4. Tolerance : includes set up tolerance, line regulation and load regulation.
5. Derating may be needed under low input voltages. Please check the static characteristics for more details.
6. Please contact MEANWELL for 320~370VDC application.
7. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 720mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to “EMI testing of component power supplies.” (as available on https://www.meanwell.com//Upload/PDF/EMI_statement_en.pdf)
8. The ambient temperature derating of 3.5℃/1000m with fanless models and of 5℃/1000m with fan models for operating altitude higher than 2000m(6500ft).

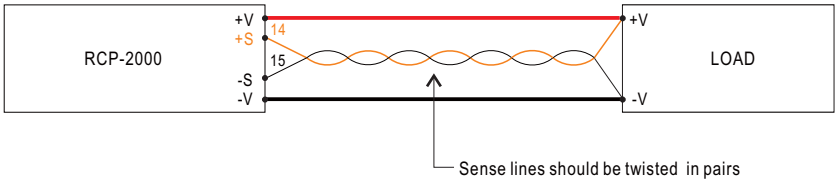
■ Function Manual

1. Voltage Drop Compensation

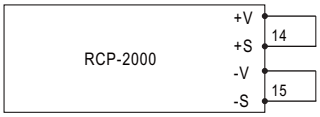
1.1 Remote Sense

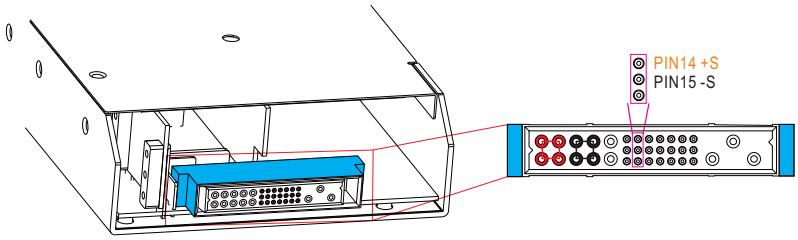
※ The Remote Sense compensates voltage drop on the load wiring up to 0.5V



1.2 Local Sense

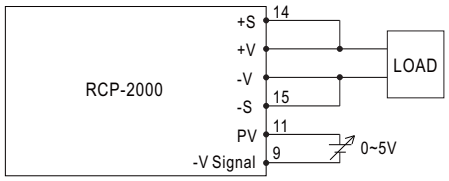
※ The +S,-S have to be connected to the *+V(signal)*,*-V(signal)*, respectively, as the following diagram, in order to get the correct output voltage if Remote Sense is not used.



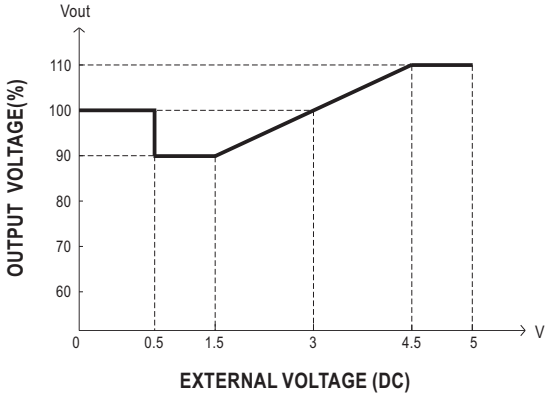


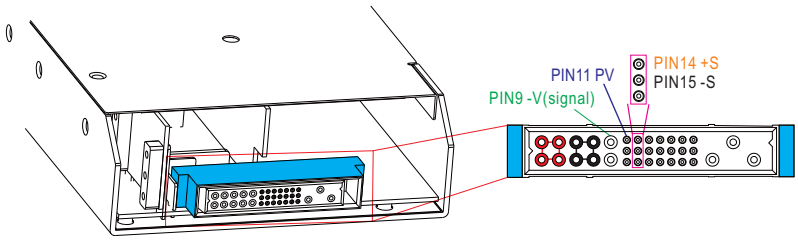
2. Output Voltage Programming (or, PV / remote voltage programming / remote adjust / margin programming / dynamic voltage trim)

※ In addition to the adjustment via the built-in potentiometer, the output voltage can be trimmed to 90~110% of the nominal voltage by applying EXTERNAL VOLTAGE.



◎ +S & +V, -S & -V also need to be connected on CN501

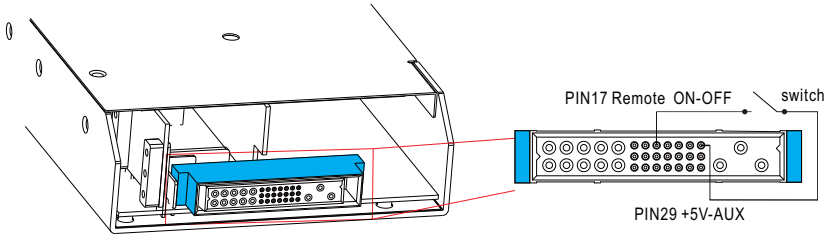




3. Remote ON-OFF Control

The power supply can be turned ON/OFF together or separately by using the "Remote ON/OFF" function.

Between *Remote ON-OFF* and *+5V-AUX*	Power Supply Status
Switch Short	ON
Switch Open	OFF



4.PMBus Communication Interface

※ RCP-2000 supports PMBus Rev. 1.1 with maximum 100KHz bus speed, allowing information reading, status monitoring and output trimming. For details, please refer to the Installation Manual.
