

30 W Power Resistor Thick Film Technology

FEATURES

 30 W at 25 °C case temperature heatsink mounted

• Direct mounting ceramic on heatsink

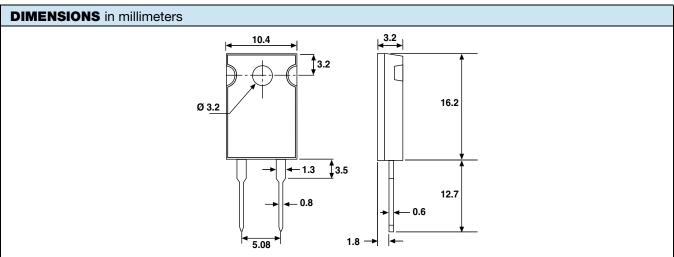

• Broad resistance range: 0.010 Ω to 550 k Ω

- · Non inductive
- TO-220 package: compact and easy to mount
- Material categorization: for definitions of compliance please see <u>www.vishay.com/doc?99912</u>

LINKS TO ADDITIONAL RESOURCES

LTO series are the extension of RTO types. We used the direct ceramic mounting design (no metal tab) of our RCH power resistors applied to semiconductor packages.

Note

Tolerances unless stated: ± 0.3 mm

CHOICE OF THE HEATSINK

The user must choose according to the working conditions of the component (power, room temperature). Maximum working temperature must not exceed 150 $^{\circ}$ C. The dissipated power is simply calculated by the following ratio:

$$P = \frac{\Delta T}{R_{TH (j-c)} + R_{TH (c-h)} + R_{TH (h-a)}}$$
(1)

P: expressed in W

ΔT: difference between maximum working temperature and room temperature

R_{TH (j-c)}: thermal resistance value measured between resistive layer and outer side of the resistor. It is the thermal resistance of the component.

 $R_{TH\ (c\ -\ h)}$: thermal resistance value measured between outer side of the resistor and upper side of the heatsink. This is the thermal resistance of the interface (grease, thermal pad), and the quality of the fastening device.

R_{TH (h - a)}: thermal resistance of the heatsink.

Example:

R_{TH (c - a)} for LTO 30 power rating 10 W at ambient temperature +25 °C

Thermal resistance R_{TH (j - c)}: 4.2 °C/W

Considering equation (1) we have:

$$\Delta T$$
 = 150 °C - 25 °C = 125 °C

$$AT = 150 \text{ C} - 25 \text{ C} = 125 \text{ C}$$
 $R_{TH (j-c)} + R_{TH (c-h)} + R_{TH (h-a)} = \frac{\Delta T}{P} = \frac{125}{10} = 12.5 \text{ °C/W}$
 $R_{TH (c-h)} R_{TH (h-a)} = 12.5 \text{ °C/W} - 4.2 \text{ °C/W} = 8.3 \text{ °C/W}$

$$R_{TH (c-h)}$$
 $R_{TH (h-a)} = 12.5 \text{ °C/W} - 4.2 \text{ °C/W} = 8.3 \text{ °C/W}$

with a thermal grease $R_{TH (c-h)} = 1$ °C/W, we need a heatsink with $R_{TH (h-a)} = 7.3$ °C/W.

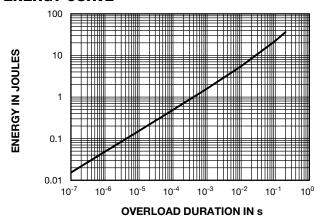

OVERLOADS

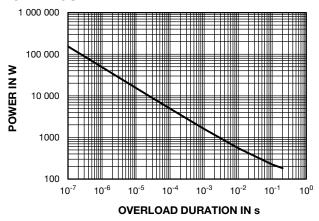

In any case the applied voltage must be lower than the maximum overload voltage of 750 V.

The values indicated on the graph below are applicable to resistors in air or mounted onto a heatsink.

ENERGY CURVE

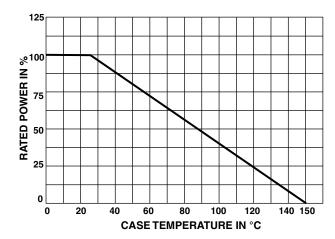

POWER CURVE

POWER RATING

The temperature of the case should be maintained within the limits specified.

To improve the thermal conductivity, surfaces in contact should be coated with a silicone grease and the torque applied on the screw for tightening should be around 1 Nm.
