Aerospace-Grade Star Quad Cable

About Star Quad Cable

Star quad cables are widely used for 100 ohm ARINC 664 10/100BASE-T Ethernet and 150 ohm fibre channel. Quad cable, when paired with quadrax contacts, offers improved EMI protection and better data integrity compared to shielded twisted data pair cable terminated to individual connector pins. This illustration depicts SAE AS6070/1 high speed data quad cable. This construction, with two shields and fluoropolymer insulation, is typical of aerospace star quad cables available from Gore, Carlisle (Tensolite), PIC, TE, Draka and other cable manufacturers. The table below lists standard star quad cables available from Glenair.

Wiring Guidelines

Implementation Guidelines for Terminating El Ochito® Contacts to 4-Pair Wire

ARINC Specification 664 Part 2- Appendix N provides guidelines for implementing 1000BASE-T and 10GBASE-T Ethernet links utilizing El Ochito® contacts. These guidelines provide instructions on maintaining the geometric relationship between the El Ochito® contact and the wire. The wire has an "A" end and a "B" end as shown in Figure 1. A contact installed on end "A" has a different wiring schematic than a contact installed on end "B". This is done to prevent the four wire pairs to be crossed contrary to their natural twist or lay. System designers and integrators should refer to ARINC 664 Part 2 for full guidance on specifying the connectors used throughout the data link.

The ARINC specification allows only four possible contact number-to-wire color combinations. Figure 2 shows these four combinations. The wire designer must specify which wire end (A or B) to terminate to each connector. Following the pin number- wire colors in Figure 2 will ensure cable assemblies are assembled with the correct wire rotation.

Signal Integrity Data

Excellent signal integrity at Gigabit speeds with S/UTP Cable

El Ochito® contacts with internal metal spline reduce crosstalk and attenuation for superior electrical bandwidth up to 9 Gbps. At -3dB insertion loss for a single mated pair at 4.1 GHz, the El Ochito® contact offers performance exceeding the requirements for 10 GbE interconnects.

These graphs illustrate data shown in Glenair Test Report GT-15-40 "High Speed Characterization Report: El Ochito® Size 8 Multi-Pair Contact for Differential Applications". All measurements were taken using an Agilent E5071C network analyzer with TDR option connected to a SMA launch board designed specifically for this testing. Test cables were fabricated using 100 ohm Glenair twisted pair S/UTP Ethernet cable 963-003-26 terminated to El Ochito® pin contact 858-003. The mating PC tail socket 858-008 was assembled onto the PCB launch fixture shown below.
