

SCDS188G - JANUARY 2005 - REVISED JANUARY 2019

TS3A5017

#### TS3A5017 Dual SP4T Analog Switch / Multiplexer / Demultiplexer

#### **Features**

- Isolation in the Powered-Down Mode,  $V_{+} = 0$
- Low ON-State Resistance
- Low Charge Injection
- **Excellent ON-State Resistance Matching**
- Low Total Harmonic Distortion (THD)
- 2.3-V to 3.6-V Single-Supply Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
  - 1500-V Human-Body Model (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)

#### **Applications**

- Sample-and-Hold Circuits
- **Battery-Powered Equipment**
- Audio and Video Signal Routing
- Communication Circuits

#### **Description**

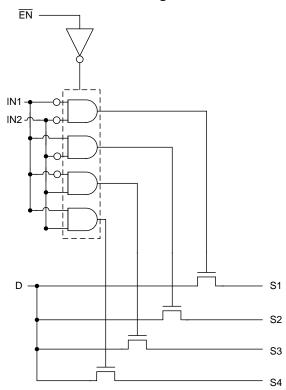

TS3A5017 device is a dual single-pole quadruple-throw (4:1) analog switch that is designed to operate from 2.3 V to 3.6 V. This device can handle both digital and analog signals, and signals up to V<sub>+</sub> can be transmitted in either direction.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
	SOIC (16)	9.90 mm × 3.90 mm
	SSOP (16)	4.90 mm × 3.90 mm
T0045047	TSSOP (16)	5.00 mm × 4.40 mm
TS3A5017	TVSOP (16)	4.40 mm × 3.60 mm
	UQFN (16)	2.50 mm × 1.80 mm
	VQFN (16)	4.00 mm × 3.50 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

#### 4 Revision History

anges from Revision F (October 2018) to Revision G	Page
Changed Feature From: 2000-V Human-Body Model To: 1500-V Human-Body Model	1
Changed the HBM value From: ±2000 V To: ±1500 V in the ESD Ratings	4
anges from Revision E (April 2015) to Revision F	Page
Changed the X <sub>TALK</sub> MAX value From:–49 dB To – 69 dB in the <i>Electrical Characteristics for 3.3-V Supply</i>	6
anges from Revision D (December 2008) to Revision E	Page
Added Applications, Device Information table, Pin Functions table, ESD Ratings table, Thermal Information Typical Characteristics, Feature Description section, Device Functional Modes, Application and Implementa section, Power Supply Recommendations section, Layout section, Device and Documentation Support section	ation tion, and
Deleted Ordering Information table.	1

#### 6 Specifications

#### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)(2)

			MIN	MAX	UNIT
V <sub>+</sub>	Supply voltage <sup>(3)</sup>	Supply voltage <sup>(3)</sup>			V
V <sub>S</sub> , V <sub>D</sub>	Analog voltage <sup>(3)(4)</sup>		-0.5	4.6	V
I <sub>SK</sub> , I <sub>DK</sub>	nalog port clamp current $V_S, V_D < 0$		-50		mA
I <sub>S</sub> , I <sub>D</sub>	ON-state switch current	N-state switch current $V_S$ , $V_D = 0$ to 7 V			mA
VI	Digital input voltage		-0.5	4.6	V
I <sub>IK</sub>	Digital input clamp current <sup>(3)(4)</sup>	V <sub>I</sub> < 0	-50		mA
I <sub>+</sub>	Continuous current through V <sub>+</sub>			100	mA
I <sub>GND</sub>	Continuous current through GND		-100		mA
T <sub>stg</sub>	Storage temperature		-65	150	°C

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- (2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum.
- (3) All voltages are with respect to ground, unless otherwise specified.
- (4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

#### 6.2 ESD Ratings

			VALUE	UNIT
		Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)	±1500	
V <sub>(ESD)</sub>	Electrostatic discharge	Charged-device model (CDM), per JEDEC specification JESD22-C101 (2)	±1000	V

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

#### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V <sub>I/O</sub>	Switch input/output voltage range	0	3.6	V
V+	Supply voltage range	2.3	3.6	V
VI	Control input voltage range	0	3.6	V
T <sub>A</sub>	Operating Temperature Range	-40	85	°C

#### 6.4 Thermal Information

				TS	3A5018			
THERMAL METRIC <sup>(1)</sup>		D (SOIC)	DBQ (SSOP)	DGV (TVSOP)	PW (TSSOP)	RGY (VQFN)	RSV (UQFN)	UNIT
		16 PINS	16 PINS	16 PINS	16 PINS	16 PINS	16 PINS	
R <sub>0JA</sub> Junction-to-ambient thermal resistance		73	82	120	108	91.6	184	°C/W

(1) For more information about traditional and new thermal metrics, see the IC Package Thermal Metrics application report, SPRA953.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

#### 6.5 Electrical Characteristics for 3.3-V Supply

 $V_{+} = 2.7 \text{ V}$  to 3.6 V,  $T_{A} = -40^{\circ}\text{C}$  to 85°C (unless otherwise noted)<sup>(1)</sup>

#### 8 Detailed Description

#### 8.1 Overview

The TS3A5017 is a dual Single-Pole-4-Throw (SP4T) solid-state analog switch. The TS3A5017, like all analog switches, is bidirectional. Each D pin connects to its four respective S pins, with the switch connection dependent on the status of EN, IN2, and IN1. See Table 1 for the switch configuration truth table.

#### 8.2 Functional Block Diagram

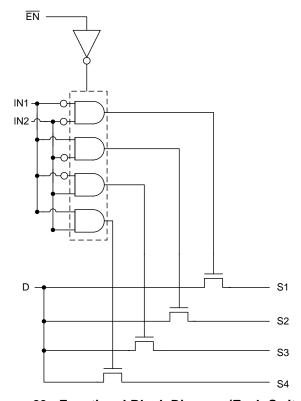

Figure 23. Functional Block Diagram (Each Switch)

#### 8.3 Feature Description

Isolation in powered-down mode allows signals to be present at the inputs while the switch is powered off without causing damage to the device. The low ON-state resistance and low charge injection give the TS3A5017 better performance at higher speeds.

#### 9 Application and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

#### 9.1 Application Information

The TS3A5018 can be used in a variety of customer systems. The TS3A5018 can be used anywhere multiple analog or digital signals must be selected to pass across a single line.

#### 9.2 Typical Application

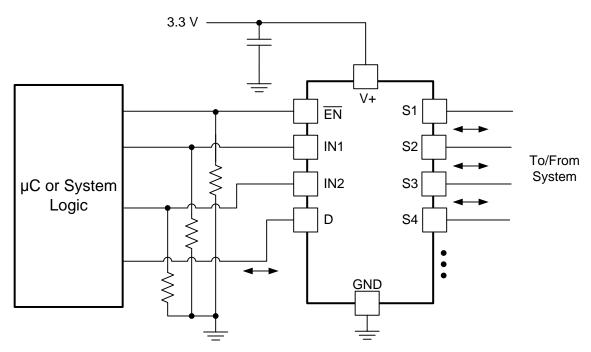

Figure 24. System Schematic for TS3A5017

#### 9.2.1 Design Requirements

In this particular application, V+ was 3.3 V, although V+ is allowed to be any voltage specified in *Recommended Operating Conditions*. A decoupling capacitor is recommended on the V+ pin. See *Power Supply Recommendations* for more details.

#### 9.2.2 Detailed Design Procedure

In this application,  $\overline{\text{EN}}$ , IN1, and IN2 are, by default, pulled low to GND. Choose these resistor sizes based on the current driving strength of the GPIO, the desired power consumption, and the switching frequency (if applicable). If the GPIO is open-drain, use pullup resistors instead.

#### **Typical Application (continued)**

#### 9.2.3 Application Curve

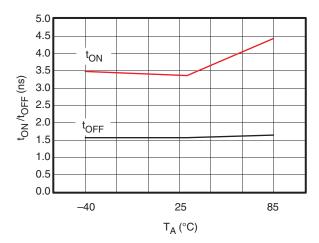

Figure 25.  $t_{ON}$  and  $t_{OFF}$  vs Temperature (V<sub>+</sub> = 3.3 V)

#### 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Recommended Operating Conditions*.

Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- $\mu F$  bypass capacitor is recommended. If there are multiple pins labeled  $V_{CC}$ , then a 0.01- $\mu F$  or 0.022- $\mu F$  capacitor is recommended for each  $V_{CC}$  because the  $V_{CC}$  pins will be tied together internally. For devices with dual-supply pins operating at different voltages, for example  $V_{CC}$  and  $V_{DD}$ , a 0.1- $\mu F$  bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1- $\mu F$  and 1- $\mu F$  capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

#### 11 Layout

#### 11.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a 90° angle, a reflection can occur. This is primarily due to the change of width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This upsets the transmission line characteristics, especially the distributed capacitance and self–inductance of the trace — resulting in the reflection. It is a given that not all PCB traces can be straight, and so they will have to turn corners. Below figure shows progressively better techniques of rounding corners. Only the last example maintains constant trace width and minimizes reflections.

<u>Un</u>used switch I/Os, such as NO, NC, and COM, can be left floating or tied to GND. However, the IN1, IN2, and  $\overline{\text{EN}}$  pins must be driven high or low. Due to partial transistor turnon when control inputs are at threshold levels, floating control inputs can cause increased I<sub>CC</sub> or unknown switch selection states. See *Implications of Slow or Floating CMOS Inputs*, SCBA004 for more details.

<sup>&</sup>lt;sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

#### PACKAGE OPTION ADDENDUM

www.ti.com 12-Jan-2024

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

#### **PLASTIC SMALL-OUTLINE**

NOTES: A. All linear dimensions are in millimeters.

B. This drawing is subject to change without notice.

C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15 per side.

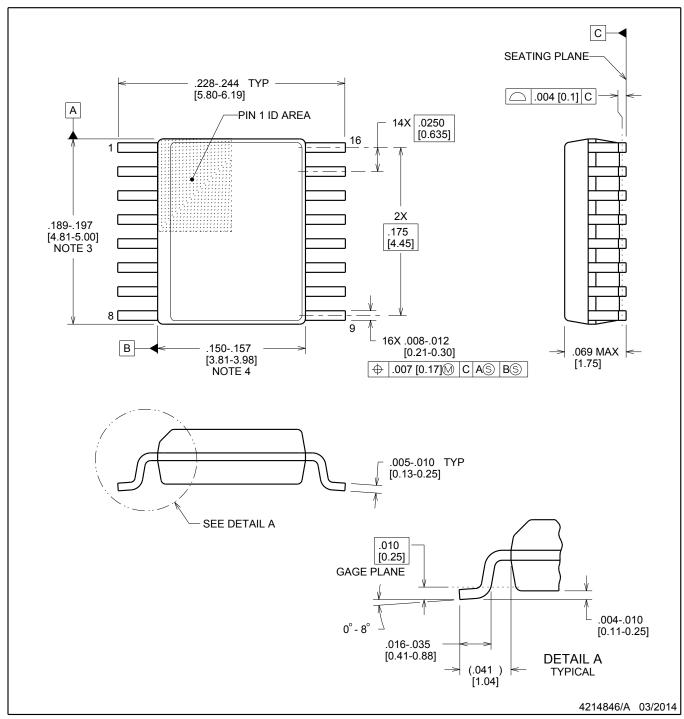

D. Falls within JEDEC: 24/48 Pins – MO-153

14/16/20/56 Pins - MO-194

SHRINK SMALL-OUTLINE PACKAGE

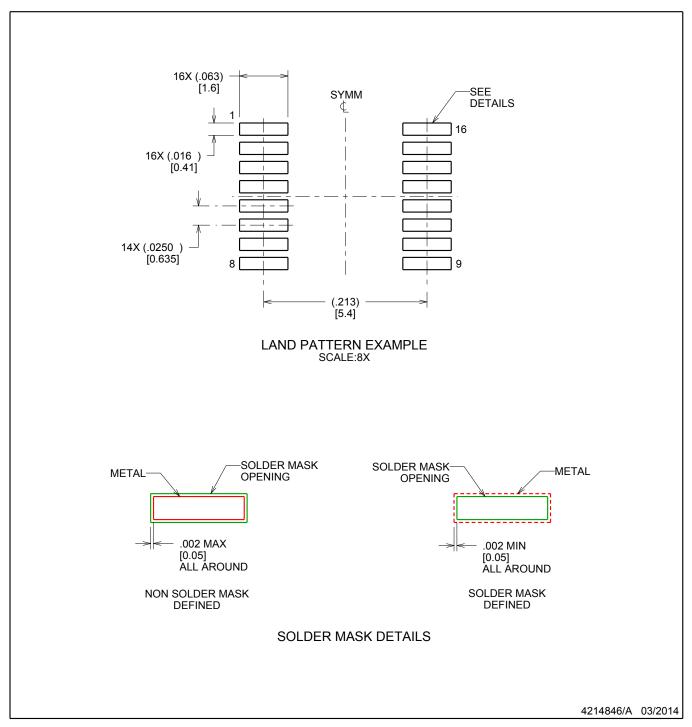

#### NOTES:

- 1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- 2. This drawing is subject to change without notice.
- 3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 inch, per side.
- 4. This dimension does not include interlead flash.5. Reference JEDEC registration MO-137, variation AB.

SHRINK SMALL-OUTLINE PACKAGE

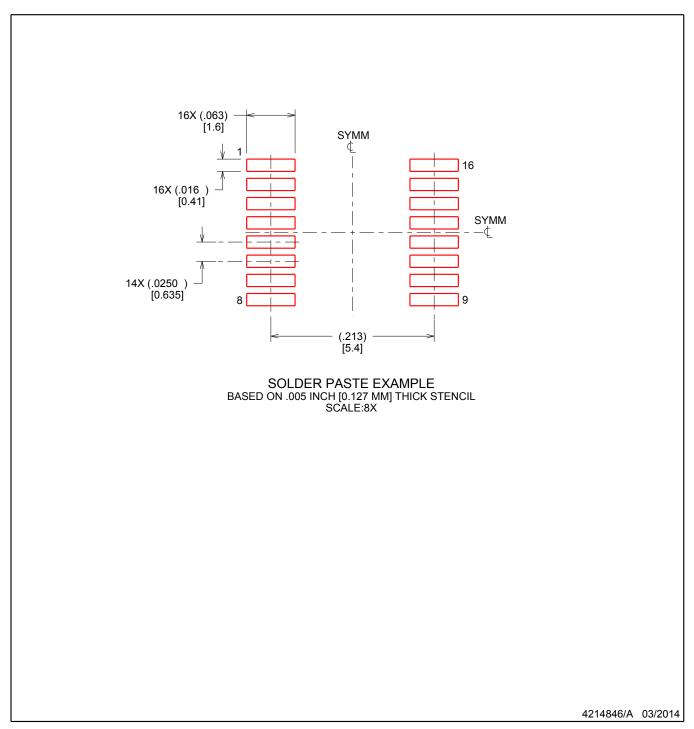

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

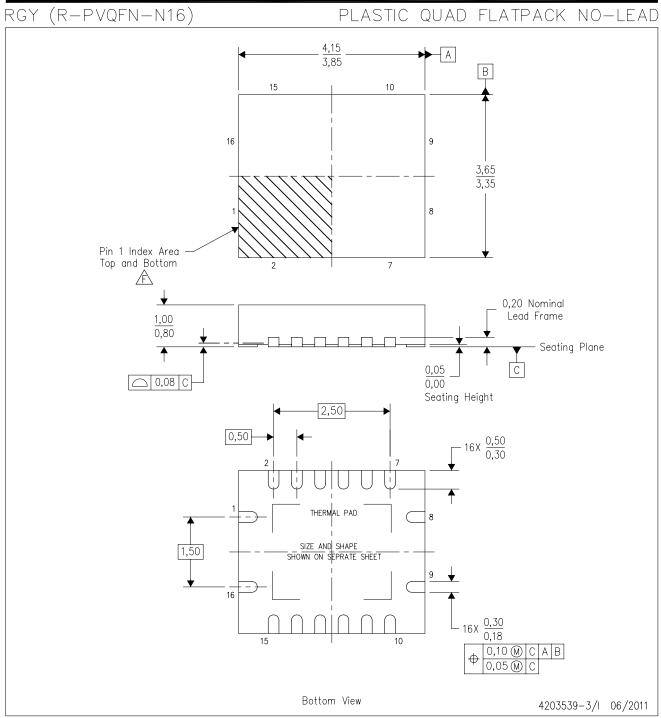

SHRINK SMALL-OUTLINE PACKAGE

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.

NOTES: A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.

- B. This drawing is subject to change without notice.
- C. QFN (Quad Flatpack No-Lead) package configuration.
- D. The package thermal pad must be soldered to the board for thermal and mechanical performance.
- E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
- Pin 1 identifiers are located on both top and bottom of the package and within the zone indicated. The Pin 1 identifiers are either a molded, marked, or metal feature.
- G. Package complies to JEDEC MO-241 variation BA.

#### RGY (R-PVQFN-N16)

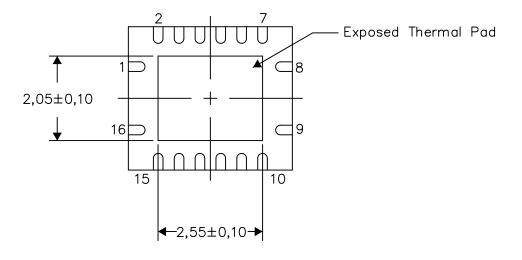

#### PLASTIC QUAD FLATPACK NO-LEAD

#### THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

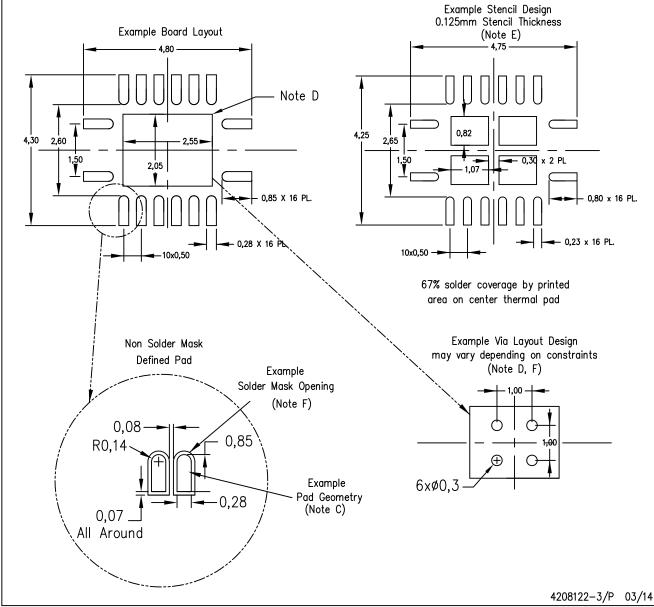

4206353-3/P 03/14

NOTE: All linear dimensions are in millimeters

## RGY (R-PVQFN-N16)

#### PLASTIC QUAD FLATPACK NO-LEAD

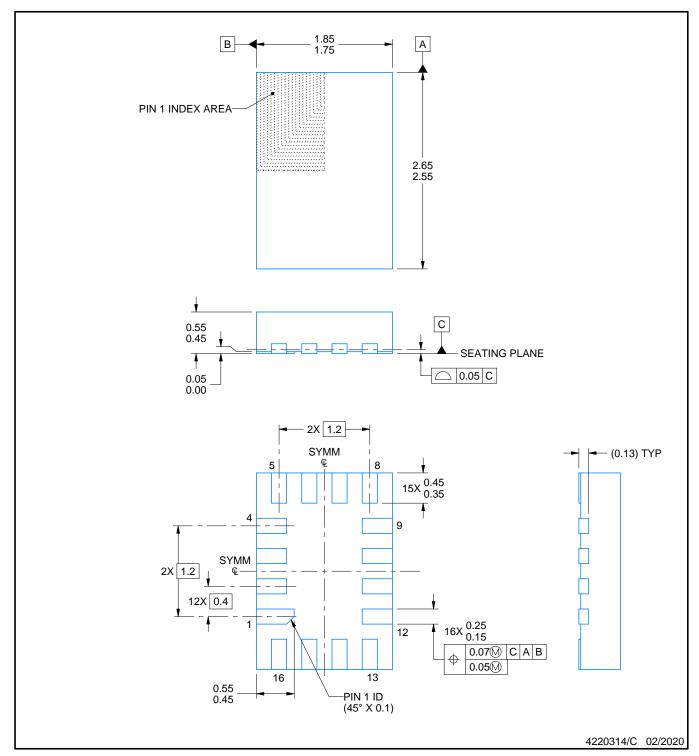

NOTES:

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat—Pack QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <a href="https://www.ti.com">http://www.ti.com</a>.
- E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
- F. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.

ULTRA THIN QUAD FLATPACK - NO LEAD

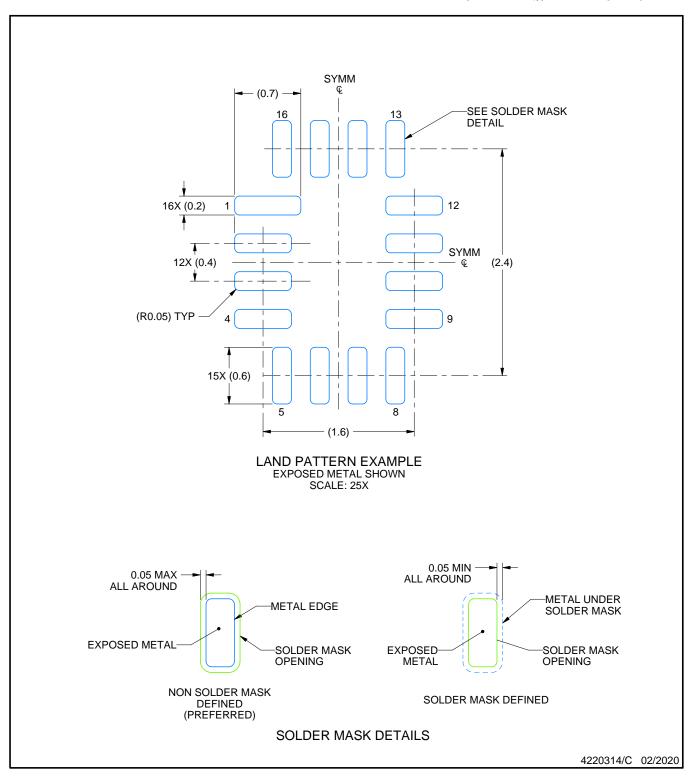

#### NOTES:

- All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
   This drawing is subject to change without notice.

ULTRA THIN QUAD FLATPACK - NO LEAD

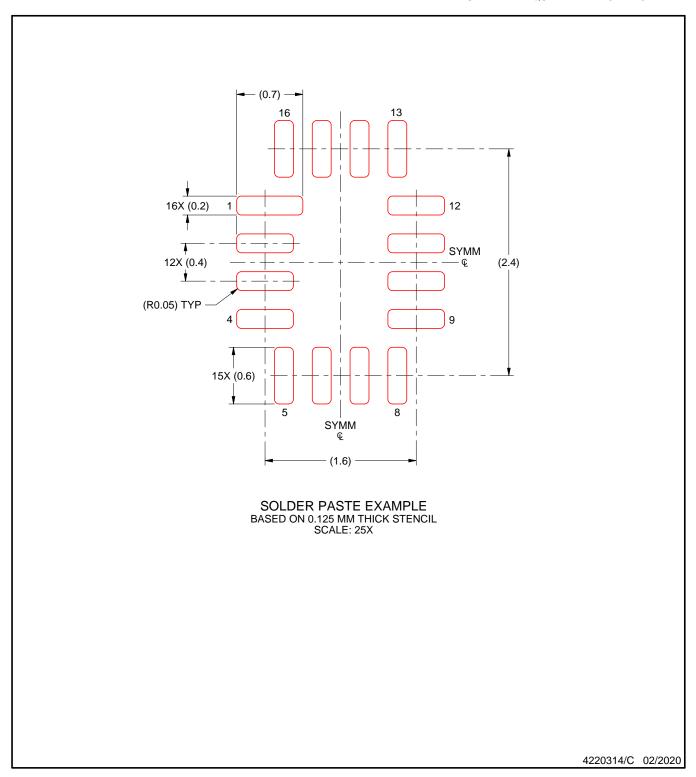

NOTES: (continued)
