Features

The signal line chip EMI filter NFW31SP series consists of high performance EMI suppression filters. They are designed for noise suppression in high speed signal digital circuits in which the signal harmonics are prone to becoming noise sources. These filters achieve a 100dB/dec. (typ.) damping characteristic with Murata's innovative circuit design. This makes these chips effective in applications where the signal and noise frequencies are close to each other.

Features

- 1. Suppresses signal noise with little or no attenuation of the signal itself.
- 2. Murata's original internal structure design enables excellent noise suppression up to high frequencies (40dB at 1GHz typ.).
- 3. NFW31SP series is available in 9 different values of cut-off frequency ranging from 10MHz up to 500MHz.
