DESCRIPTION

Make almost any surface glow, sense, or interact with [Chibitronics](#) circuit stickers!

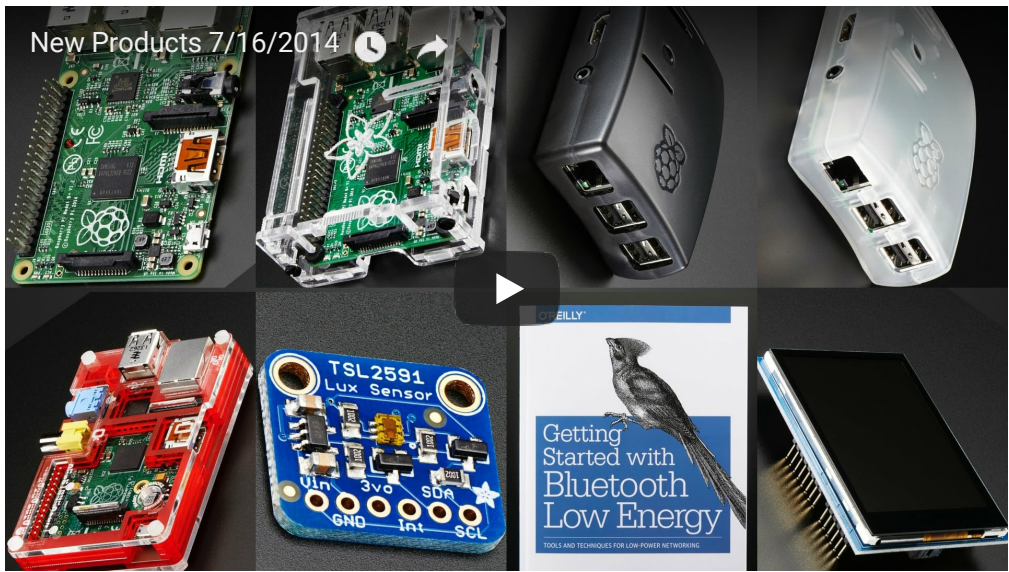

Circuit stickers are an imaginative and easy way to make fun electronics projects without coding, soldering, or maker experience. Just stick your circuit sticker onto a surface and add a battery to get a unique project that reps your maker spirit. You can even connect stickers with conductive materials like [copper tape](#) or even [conductive paint](#) to create elaborate designs and art projects.

The stickers are super lightweight, thin, and flexible. They're perfect for educators, artists, and novices and are a great introduction into the world of electronics.

This is the **Chibitronics Effects Add-on Pack**. It contains four effects stickers to add blinking, fading, twinkling, and heartbeat effects to projects and is a great addition to the [Chibitronics Starter Kit](#).

[Chibitronics](#) is collaboration between [bunnie Huang](#) and [Jie Qi](#). Jie is a PhD student at the MIT Media Lab and her research is all about combining arts and crafts with electronics and programming. bunnie is the Director of Studio Kosagi and a hacker who designs and manufactures hardware.
