SCIHP0530 Inductance decrease by current

| DC current (mA) | 4R7 Inductance (uH) | 1R5 Inductance (uH) | R68 Inductance (uH) |
|-----------------|---------------------|---------------------|---------------------|
| 10              | ~3.0                | ~1.0                | ~0.5                |
| 100             | ~2.8                | ~0.9                | ~0.48               |
| 1000            | ~2.5                | ~0.8                | ~0.45               |
| 10000           | ~1.5                | ~0.7                | ~0.4                |
| 100000          | ~0.8                | ~0.6                | ~0.35               |

- (1). Inductance tolerance  $\pm 20\%$  tested at 0.25V, 0ADC and  $25^{\circ}\text{C}$
- (2). DCR measured at  $25^{\circ}\text{C}$ .
- (3). The DC current at which the inductance decreases by 20% from its initial value.
- (4). The DC current that results in a  $40^{\circ}\text{C}$  temperature rise from  $25^{\circ}\text{C}$  ambient
- (\*) Part temperature (ambient + temp rise) should not exceed  $125^{\circ}\text{C}$  under worst case operating conditions. Circuit design, component placement, PCB trace size and thickness, airflow and other cooling provisions may affect the temperature of the part. Part temperature should be verified in the end application.
