Backplanes

Our competence in overview

Comprehensive standard backplane programme

AdvancedTCA - MicroTCA - CompactPCI - VME - Schroff offers you an extensive standard backplane programme that is already ideally matched to your requirements. Should you still not find your backplane in our range, we can develop or modify to create your tailor-made backplane, quickly and on attractive terms. All our developing and manufacturing is done in-house and competent personnel are available at any time to deal with technical questions, quotes and project support.

Custom development to customer requirements

From minor modifications to our standard backplanes through to specific form factors and connection topologies, Schroff has the right solution for you

One contact partner as customer interface

Competent personnel are available at any time for technical questions, quotes, project support and after-sales care. If you wish, we are also happy to help you generate the specification for your custom backplane. Contact at an early stage between our technical staff and our customers helps us to develop cost-optimised projects that meet all our customers' requirements.

Many years of experience

50 years of experience, continual fundamental research and innovation in the backplane sector. Active participation in standards committees and in the specification of new system architectures and high-speed transmission technologies.

Modern design tools

Modern simulation tools and measurement equipment plus in-house developed high-performance test adaptors. Development of new technologies and topologies using high-speed measurements performed in-house.

Modern machine facilities in Straubenhardt

Solder paste printing is one of the quality-defining process steps in backplane manufacture. This solder-paste printer, based on innovative inkjet technology, allows fast, flexible and highly dependable solder paste printing. Since the process dispenses with the 'stencils' required by other methods, the printing program can be changed in a very short time. This means that small batches can also be printed cost-effectively.

Our modern **SMD placement machines** support a wide spectrum of components with a high placement performance. Small and large production runs can be implemented flexibly and time-efficiently.

Vapour-phase soldering, also known as vapour-phase reflow, is currently the most universal and most reliable soldering process. It is ideally suited to all types of SMD component and carrier material. The homogenous temperature distribution of the carrier medium allows the widest variety of sub-assemblies, from Flexprints to multilayer boards, to be soldered reliably without danger of overheating.

There is also the option of processing conventional components with our **wave-soldering system**.

Automatic optical inspection (AOI) is an optical test procedure for sub-assemblies equipped with components. Highly-developed image processing systems reliably detect faulty soldered joints and wrongly placed or missing components.

Connectors are pressed into the backplane fully automatically. The **press-in technique** allows quick and economic mounting of the connector without subjecting the PCB to thermal stress. The press-in action creates a gas-tight, dependably electrically conductive and mechanically strong connection. Intelligent force/displacement measuring during the press-in action ensures consistent high quality.

Backplanes that are subject to particular climatic stresses can be coated with a **protective lacquer (conformal coating)**. This coating protects the backplane from e.g. corrosion and mould. The fluorescent characteristic of the protective coating enables the coating to be checked for completeness or damage under UV light.

No backplane leaves our production facility without **100% testing**. All backplanes are subjected to extensive electrical testing before despatch. An automatic process checks the entire backplane for continuity and short circuits. This testing also covers passive and simple active components such as resistors, capacitors and diodes and the description and testing of I2C EEPROMS or bus terminations. For this Schroff has a comprehensive automated and semi-automated testing facility.

Backplanes – CompactPCI Serial

CompactPCI Serial backplanes

12415020

- Conforms to PICMG CompactPCI Serial (CPCI-S.0 R2.0) specification
- 1 system slot and 0 ... 8 peripheral slots
- Supports PCIe (Gen3), USB 2.0 and USB 3.0, S-ATA (II & Rev. 3.0) and Ethernet (10GBase-T)
- PCIe: Up to two 8 x lanes and up to six 4 x lanes
- Powerbugs for +12 V payload voltage and Minifit plug for +5 V standby voltage
- Utility connector on rear of backplane
- Mechanical centering and keying/coding strip in stainless steel on every fully equipped front and rear slot
- PICMG 2.9 IPMB plug can be fitted on request

Backplanes – CompactPCI Serial

CompactPCI Serial power backplane

- Power backplane for pluggable PSUs with FCI Power Blade plug
- 3 U, 8 HP, 1 PSU connector
- Separate inputs for AC and DC with Fastons
- Connector for 12 V, 5 V standby, utility signals, current sharing, power button, serial console to a UPS and digital I/O at the rear
- Optionally, the PICMG 2.9 SMBus plug and additional powerbugs for 12 V and 5 V standby can be fitted
- Geographical address can be set by means of a DIP switch

- Bridge mounted on rear of backplane, hence no loss of slots
- Very compact and low bridge shape, no interference with rear transition boards
- Schroff CompactPCI backplanes with system slot right are used as primary backplane
- The 32-bit bridge is 33 MHz capable and the 64-bit bridge is 33/66 MHz capable
- Bridges are designed for primary backplanes with system slot right; bridges for system slot left available on request
- A summary of possible backplane/bridge combinations can be found on the Schroff website

Keying and alignment for VPX backplanes

- Conforms to VITA 46.0
- Keying and alignment for VPX backplane slots with slot spacings 0.8, 0.85 or 1"
- Different versions for air-cooled and conduction-cooled systems
- Air-cooled systems additionally contain stiffening beads that also prevent incorrect insertion of a VPX board (as per VITA 46.0 section 7.9)
- Applications for versions with and without rear I/O
- For board thicknesses 3.6 ... 5.5 mm and 5.5... 7.5 mm
- Simple to fit into the fixing holes provided on every VPX backplane
- One packaging unit contains all components to completely populate 10 slots

- For DIN 41612 connectors, type C
- 2 different measuring fields:
 - current and voltage measurement (U/I):
pluggable test bridges
 - voltage measurement (U):
soldered test bridges
- Connector type C64:
Header with pin diameter 0.6 mm for wire wrap
- Connector type C96:
Slot for second test unit or terminator board (b)
- Outer pin rows (C96: pin 1a, b, c and pin 32a, b, c;
C64: pin 1a, c and pin 32a, c) with wider tracks for
power supply (2 A per track)

Dimensional drawing of test adaptor

- Layout of conductive tracks and layer build-up match the requirements of the VME bus
- Measuring field version for current and voltage measurement (V/I), (a)
- Additional measuring pins, e.g. for the probe tips of an oscilloscope (b)
- 1 pin position for second test object,
1 pin position for terminator board
- Voltage supply lines are designed for 2 A
- 6 U test adaptors consist of two 3 U test adaptors linked via an intermediate adaptor

Types/board versions

Epoxy fibreglass EP-GC02 to DIN 40802 (FR4).
Outlying connections (e.g. pins 1a, b, c and pins 32a, b, c) each have a wider PCB track or large-surface tracks on inner layers – e.g. for shielding, V_{CC}, GND.

Type	
1L	PCB single-sided, laminated (suitable for up to 2 MHz)
2L	PCB, double-sided, laminated and through-connected (suitable for up to approx. 8 MHz)
4L	Multi-layer, 4-layer (suitable for above 8 MHz): Multi-layer technology with large-area inner layers (signal-surface-surface-signal). In the coax version the large-area inner layers can be soldered to the desired pins by means of power links.
