

LCD Segment Drivers

Multi-function Segment Drivers

BU97540KV-M MAX335 Segment(67segx5COM)

General Description

The BU97540KV-M is 1/5, 1/4, 1/3duty or Static General-purpose LCD driver. The BU97540KV-M can drive up to 335 LCD Segments. The BU97540KV-M can also control up to 9 General-purpose/PWM output pins.

These products also incorporate a key scan circuit that accepts input from up to 30 keys to reduce printed circuit board wiring.

Features

- AEC-Q100 Qualified (Note)
- Key input function for up to 30 keys (A key scan is performed only when a key is pressed.)
- Supports 1 chip(Master) mode and 2 chip(Master + Slave) mode
- Either 1/5, 1/4, 1/3 or Static can be selected with the serial control data.
 - 1 chip mode(only Master):
 - 1/5 duty drive: Up to 335 segments can be driven
 - 1/4 duty drive: Up to 272 segments can be driven
 - 1/3 duty drive: Up to 204 segments can be driven
 - Static drive: Up to 68 segments can be driven
 - 2 chip mode(Master + Slave):
 - 1/5 duty drive: Up to 680 segments can be driven
 - 1/4 duty drive: Up to 548 segments can be driven
 - 1/3 duty drive: Up to 411 segments can be driven
 - Static drive: Up to 137 segments can be driven
- Serial data control of frame frequency for common and segment output waveforms.
- Serial data control of switching between the segment output pin, PWM output pin and General-purpose output pin functions.(Max 9 pins)
- Built-in OSC circuit
- Integrated Voltage Detected Type Power on Reset (VDET) circuit
- No external component
- Low power consumption design
- Supports Line and Frame Inversion

(Note) Grade 3

Applications

- Car audio, Home electrical appliance, Meter equipment etc.

Key Specifications

- | | |
|--------------------------------|----------------------------------|
| ■ Supply Voltage Range: | +2.7V to +6.0V |
| ■ Operating Temperature Range: | -40°C to +85°C |
| ■ Max Segments: | 335 Segments |
| ■ Display Duty: | Static, 1/3, 1/4, 1/5 Selectable |
| ■ Bias: | 1/2, 1/3, 1/4 Selectable |
| ■ Interface: | 3Wire Serial Interface |

Packages

Figure 3. Pin Configuration (TOP VIEW)

Absolute Maximum Ratings (VSS = 0.0V)

Parameter	Symbol	Conditions	Rating	Unit
Maximum Supply Voltage	VDD max	VDD	-0.3 to +7.0	V
Input Voltage	V _{IN1}	SCE, SCL, SDI	-0.3 to +7.0	V
	V _{IN2}	KI1 to KI5	-0.3 to +7.0	V
Allowable Loss	Pd		1.20 ^(Note)	W
Storage Temperature	Tstg		-55 to +125	°C

(Note) When use more than Ta = 25°C, subtract 12mW per degree. (Using ROHM standard board)

(Board size: 70mm×70mm×1.6mm material: FR4 board copper foil: land pattern only)

Caution 1: Operating the IC over the absolute maximum ratings may damage the IC. The damage can either be a short circuit between pins or an open circuit between pins and the internal circuitry. Therefore, it is important to consider circuit protection measures, such as adding a fuse, in case the IC is operated over the absolute maximum ratings.

Caution 2: Should by any chance the maximum junction temperature rating be exceeded the rise in temperature of the chip may result in deterioration of the properties of the chip. In case of exceeding this absolute maximum rating, design a PCB with power dissipation taken into consideration by increasing board size and copper area so as not to exceed the maximum junction temperature rating.

Recommend Operating Conditions (Ta = -40°C to +85°C, VSS = 0.0V)

Parameter	Symbol	Conditions	Rating			Unit
			Min	Typ	Max	
Operating Temperature	Topr		-40	-	+85	°C
Supply Voltage	VDD		2.7	5.0	6.0	V

Electrical Characteristics for the Allowable Operating Ranges

Oscillation Characteristics (Ta = -40 to +85°C, VDD = 2.7V to 6.0V, VSS = 0.0V)

Parameter	Symbol	Pin	Conditions	Limit			Unit
				Min	Typ	Max	
Oscillator Frequency 1	f _{OSC1}	-	VDD = 2.7V to 6.0V	300	-	720	kHz
Oscillator Frequency 2	f _{OSC2}	-	VDD = 5.0V	540	600	660	kHz
Oscillator Frequency 3	f _{OSC3}	-	VDD = 6.0V	562	625	688	kHz
External Clock Frequency ^(Note)	f _{OSC4}	OSC_IN/S73	External clock mode (OC = 1)	30	-	1000	kHz
External Clock Rise Time	t _r			-	160	-	ns
External Clock Fall Time	t _f			-	160	-	ns
External Clock Duty	t _{DTY}			30	50	70	%

(Note) Frame frequency is decided external frequency and dividing ratio of FC0 to FC3 setting.

[Reference Data]

Figure 4. Oscillator Frequency Typical Temperature Characteristics

MPU Interface Characteristics (Ta=-40 to +85°C, VDD = 2.7V to 6.0V, VSS = 0V)

Parameter	Symbol	Pin	Conditions	Limit			Unit
				Min	Typ	Max	
Data Setup Time	t_{DS}	SCL, SDI		120	-	-	ns
Data Hold Time	t_{DH}	SCL, SDI		120	-	-	ns
SCE Wait Time	t_{CP}	SCE, SCL		120	-	-	ns
SCE Setup Time	t_{CS}	SCE, SCL		120	-	-	ns
SCE Hold Time	t_{CH}	SCE, SCL		120	-	-	ns
Clock Cycle Time	t_{CCYC}	SCL		320	-	-	ns
High-level Clock Pulse Width	t_{CHW}	SCL		120	-	-	ns
Low-level Clock Pulse Width (Write)	t_{CLWW}	SCL		120	-	-	ns
Low-level Clock Pulse Width (Read)	t_{CLWR}	SCL	$R_{PU} = 4.7k\Omega$ $C_L = 10pF^{(Note)}$	1.6	-	-	μs
Rise Time	t_r	SCE, SCL, SDI		-	160	-	ns
Fall Time	t_f	SCE, SCL, SDI		-	160	-	ns
SDO Output Delay Time	t_{DC}	SDO	$R_{PU} = 4.7k\Omega$ $C_L = 10pF^{(Note)}$	-	-	1.5	μs
SDO Rise Time	t_{DR}	SDO	$R_{PU} = 4.7k\Omega$ $C_L = 10pF^{(Note)}$	-	-	1.5	μs

(Note) Since SDO is an open-drain output, " t_{DC} " and " t_{DR} " depend on the resistance of the pull-up resistor R_{PU} and the load capacitance C_L .

R_{PU} : $1k\Omega \leq R_{PU} \leq 10k\Omega$ is recommended.

C_L : A parasitic capacitance to VSS in an application circuit. Any component is not necessary to be attached.

Pin Description

Symbol	Pin No.	Function	Active	I/O	Handling when unused
S1/P1/G1 to S9/P9/G9	79,80, 1 to 7	Segment output for displaying the display data transferred by serial data input. The S1/P1/G1 to S6/P6/G6 pins can also be used as General-purpose outputs when so set up by the control data.	-	O	OPEN
S10 to S52, S72	8 to 50, 74	Segment output for displaying the display data transferred by serial data input.	-	O	OPEN
KS1/S53 to KS6/S58	51 to 56	Key scan outputs Although normal key scan timing lines require diodes to be inserted in the timing lines to prevent shorts, since these outputs are unbalanced CMOS transistor outputs, these outputs will not be damaged by shorting when these outputs are used to form a key matrix. The KS1/S53 to KS6/S58 pins can be used as segment outputs when so specified by the control data.	-	O	OPEN
KI1/S59 to KI5/S63	57 to 61	Key scan inputs These pins have built-in pull-down resistors. The KI1/S59 to KI5/S63 pins can be used as segment outputs when so specified by the control data.	-	I O	VSS OPEN
SYNCIO/S64	62	Segment Output for Master without Slave application. SYNC output signal for Master with Slave application and SYNC input signal for Slave application.	- - H	O O I	OPEN - -
CLKIO/S65	63	Segment Output for Master without Slave application. CLK output signal for Master with Slave application and CLK input signal for Slave application.	- - 	O O I	OPEN - -
S66/TESTIN	64	TESTIN Input for Master Application. Segment Output for Slave Application.	- -	I O	VDD OPEN
COM5/S67	65	COMMON / SEGMENT output for LCD driving Assigned as COMMON output in 1/5 Duty mode and SEGMENT output in 1/1 Duty, 1/3 Duty and 1/4 Duty modes	-	O	OPEN
COM4 to COM1	66 to 69	Common driver output pins. The frame frequency is fo[Hz].	-	O	-
MS	72	Master / Slave Control Switch L : Master, H : Slave	-	I	-
OSC_IN/S73	75	Segment output for displaying the display data transferred by serial data input. The pin OSC_IN/S73 can be used as external frequency input pin when set up by the control data.	-	I/O	OPEN
SCE SCL SDI	76 77 78	Serial data transfer inputs. Must be connected to the controller. SCE: Chip enable SCL: Synchronization clock SDI: Transfer data	H  -	I I I	- - -
SDO	73	Output data	-	O	OPEN
VDD	70	Power supply pin of the IC A power voltage of 2.7V to 6.0V must be applied to this pin.	-	-	-
VSS	71	Power supply pin. Must be connected to Ground.	-	-	-

Control Data Functions

1. KM0, KM1 and KM2: Key Scan output pin/Segment output pin switching control data

These control data bits switch the functions of the KS1/S53 to KS6/S58 output pins between key scan output and segment output.

KM0	KM1	KM2	Output Pin State						Maximum Number of Input keys	Reset Condition
			KS1/S53	KS2/S54	KS3/S55	KS4/S56	KS5/S57	KS6/S58		
0	0	0	KS1	KS2	KS3	KS4	KS5	KS6	30	-
0	0	1	S53	KS2	KS3	KS4	KS5	KS6	25	-
0	1	0	S53	S54	KS3	KS4	KS5	KS6	20	-
0	1	1	S53	S54	S55	KS4	KS5	KS6	15	-
1	0	0	S53	S54	S55	S56	KS5	KS6	10	-
1	0	1	S53	S54	S55	S56	S57	KS6	5	-
1	1	0	S53	S54	S55	S56	S57	S58	0	-
1	1	1	S53	S54	S55	S56	S57	S58	0	○

In Slave chip of 2 chip mode, it is automatically set to all segment output.

2. P0, P1, P2, and P3: Segment / PWM / General-purpose output pin switching control data

These control bits are used to select the function of the S1/P1/G1 to S9/P9/G9 output pins (Segment Output Pins or PWM Output Pins or General-purpose Output Pins).

P0	P1	P2	P3	S1/P1/G1	S2/P2/G2	S3/P3/G3	S4/P4/G4	S5/P5/G5	S6/P6/G6	S7/P7/G7	S8/P8/G8	S9/P9/G9	Reset Condition

1	0	1	1	S1	S2	S3	S4	S5	S6	S7	S8	S9	-
1	1	0	0	S1	S2	S3	S4	S5	S6	S7	S8	S9	-
1	1	0	1	S1	S2	S3	S4	S5	S6	S7	S8	S9	-
1	1	1	0	S1	S2	S3	S4	S5	S6	S7	S8	S9	-
1	1	1	1	S1	S2	S3	S4	S5	S6	S7	S8	S9	○

PWM output or General-purpose output is selected by PGx(x = 1 to 9) control data bit.

When the General-purpose Output Pin Function is selected, the correspondence between the output pins and the respective display data is given in the table below.

Output Pins	Corresponding Display Data			
	1/5 Duty mode	1/4 Duty mode	1/3 Duty mode	Static mode
S1/P1/G1	D1	D1	D1	D1
S2/P2/G2	D6	D5	D4	D2
S3/P3/G3	D11	D9	D7	D3
S4/P4/G4	D16	D13	D10	D4
S5/P5/G5	D21	D17	D13	D4
S6/P6/G6	D26	D21	D16	D5
S7/P7/G7	D31	D25	D19	D7
S8/P8/G8	D36	D29	D22	D8
S9/P9/G9	D41	D33	D25	D9

When the General-purpose Output Pin Function is selected, the respective output pin outputs a "HIGH" level when its corresponding display data is set to "1". Likewise, it will output a "LOW" level, if its corresponding display data is set to "0". For example, at 1/4 Duty mode, S4/P4/G4 is used as a General-purpose Output Pin, if its corresponding display data D13 is set to "1", then S4/P4/G4 will output "HIGH" level. Likewise, if D13 is set to "0", then S4/P4/G4 will output "LOW" level.

3. FL: Line Inversion or Frame Inversion switching control data

This control data bit selects either line inversion mode or frame inversion mode.

FL	Inversion mode	Reset Condition
0	Line Inversion	○
1	Frame Inversion	-

Typically, when driving large capacitance LCD, Line inversion will increase the influence of crosstalk.

Regarding driving waveform, refer to [LCD Driving Waveforms](#).

Control Data Functions – continued

4. DR: 1/3 bias drive or 1/2 bias drive switching control data

This control data bit selects either 1/3 bias drive or 1/2 bias drive.

DR	Bias drive scheme	Reset Condition
0	1/3 bias	○
1	1/2 bias	-

5. SS: Master Clock and Sync output pin/Segment output pin switching control data

This control data bit switches the functions of the CLKIO/S64 and SYNCIO/S65 output pins of master.

SS	Output Pin State		Reset Condition
	CLKIO/S64	SYNCIO/S65	
0	S64	S65	○
1	CLKIO	SYNCIO	-

In Slave chip of 2 chip mode, it is automatically set to CLKIO and SYNCIO.

6. DT0, DT1: 1/5 duty drive, 1/4 duty drive, 1/3 duty drive or Static switching control data

These control data bits select either 1/5 duty drive, 1/4 duty drive, 1/3 duty drive or Static

DT0	DT1	Duty drive scheme	Reset Condition
0	0	Static drive	-
0	0	1/3 duty drive	-
0	1	1/4 duty drive	○
1	1	1/5 duty drive	-

7. FC0, FC1, FC2 and FC3: Common/segment output waveform frame frequency switching control data

These control data bits set the frame frequency for common and segment output waveforms.

FC0	FC1	FC2	FC3	Frame Frequency f_o (Hz)	Reset Condition
0	0	0	0	$f_{osc}^{(Note)} / 12288$	○
0	0	0	1	$f_{osc} / 10752$	-
0	0	1	0	$f_{osc} / 9216$	-
0	0	1	1	$f_{osc} / 7680$	-
0	1	0	0	$f_{osc} / 6144$	-
0	1	0	1	$f_{osc} / 4608$	-
0	1	1	0	$f_{osc} / 3840$	-
0	1	1	1	$f_{osc} / 3072$	-
1	0	0	0	$f_{osc} / 2880$	-
1	0	0	1	$f_{osc} / 2688$	-
1	0	1	0	$f_{osc} / 2496$	-
1	0	1	1	$f_{osc} / 2304$	-
1	1	0	0	$f_{osc} / 2112$	-
1	1	0	1	$f_{osc} / 1920$	-
1	1	1	0	$f_{osc} / 1728$	-
1	1	1	1	$f_{osc} / 1536$	-

(Note) f_{osc} : Internal Oscillation Frequency (600 kHz Typ)

Control Data Functions – continued

8. OC: Internal oscillator operating mode/External clock operating mode switching control data

This control data bit selects oscillation mode.

OC	Operating mode	In/Out pin(OSC_IN/S73) status	Reset Condition
0	Internal oscillator	S73 (segment output)	○
1	External Clock	OSC_IN (clock input)	-

<External Clock input timing function>

Internal oscillation / external clock select signal behavior is below.

Input external clock after serial data sending.

Internal oscillation-External Clock

Select signal(Internal signal)

Internal oscillation
(Internal signal)

External Clock
(OSC_IN)

9. SC: Segment on/off switching control data

This control data bit controls the on/off state of the segments.

SC	Display state	Reset Condition
0	on	-
1	off	○

Note that when the segments are turned off by setting SC to "1", the segments are turned off by outputting segment off waveforms from the segment output pins.

10. BU0, BU1 and BU2: Normal mode/power-saving mode switching control data

These control data bits select either normal mode or power-saving mode.

Reset Condition												
BU0	BU1	BU2	Mode	OSC Oscillator	Segment outputs	Output Pin States During Key Scan Standby						Reset Condition
					Common outputs	KS1	KS2	KS3	KS4	KS5	KS6	
0	0	0	Normal	Operating	Operating	H	H	H	H	H	H	-
0	0	1	Power-saving	Stopped	Low(VSS)	L	L	L	L	L	H	-
0	1	0				L	L	L	L	H	H	-
0	1	1				L	L	L	H	H	H	-
1	0	0				L	L	H	H	H	H	-
1	0	1				L	H	H	H	H	H	-
1	1	0				H	H	H	H	H	H	-
1	1	1				H	H	H	H	H	H	○

Power-saving mode status: S1/P1/G1 to S9/P9/G9 = active only General-purpose output

S10 to OSC_IN/S73 = low (VSS)

COM1 to COM5 = low (VSS)

Shut off current to the LCD drive bias voltage generation circuit

Stop the Internal oscillation circuit

However, serial data transfer is possible when at Power-saving mode.

11. SSC: SEG/COM output pin switching control data

This control data bit selects SEG or COM output for Slave.

SSC	Output Pin State					Reset Condition
	COM5/S67	COM4/S68	COM3/S69	COM2/S70	COM1/S71	
0	S67	S68	S69	S70	S71	○
1	COM5	COM4	COM3	COM2	COM1	-

This option is not available in Master mode.

Control Data Functions – continued

12. PG1, PG2, PG3, PG4, PG5, PG6, PG7, PG8 and PG9: PWM/General-purpose output switching control data
This control data bit select either PWM output or General-purpose output of Sx/Px/Gx pins. (x = 1 to 9)

PGx(x = 1 to 9)	Mode	Reset Condition
0	PWM Output	○
1	General-purpose Output	-

<PWM<->GPO Changing function>

Normal behavior of changing GPO to PWM is below.

- PWM operation is started by command import timing of DD: 01 during GPO → PWM change.
- Please take care of reflect timing of new duty setting of DD: 10 and DD: 11 are from the next PWM.

In order to avoid this operation, please input commands in reverse as below.

13. PF0, PF1, PF2, PF3 and PF4: PWM output waveform frame frequency switching control data
These control data bits set the frame frequency for PWM output waveforms.

PF0	PF1	PF2	PF3	PF4	PWM output Frame Frequency fp(Hz)	Reset Condition
0	0	0	0	0	$f_{osc} / 4096$	○
0	0	0	0	1	$f_{osc} / 3840$	-
0	0	0	1	0	$f_{osc} / 3584$	-
0	0	0	1	1	$f_{osc} / 3328$	-
0	0	1	0	0	$f_{osc} / 3072$	-
0	0	1	0	1	$f_{osc} / 2816$	-
0	0	1	1	0	$f_{osc} / 2560$	-
0	0	1	1	1	$f_{osc} / 2304$	-
0	1	0	0	0	$f_{osc} / 2048$	-
0	1	0	0	1	$f_{osc} / 1792$	-
0	1	0	1	0	$f_{osc} / 1536$	-
0	1	0	1	1	$f_{osc} / 1280$	-
0	1	1	0	0	$f_{osc} / 1024$	-
0	1	1	0	1	$f_{osc} / 768$	-
0	1	1	1	0	$f_{osc} / 512$	-
0	1	1	1	1	$f_{osc} / 256$	-
1	0	0	0	0	$f_{osc} / 128$	-
...	...	...	...	...	...	...
1	1	1	1	1	$f_{osc} / 128$	-

Control Data Functions – continued

14. CT0, CT1, CT2 and CT3: Display Contrast switching control data

These control data bits set display contrast

CT0	CT1	CT2	CT3	LCD Drive bias voltage for VLCD Level	Reset Condition
0	0	0	0	1.000*VDD	○
0	0	0	1	0.975*VDD (Note)	-
0	0	1	0	0.950*VDD (Note)	-
0	0	1	1	0.925*VDD (Note)	-
0	1	0	0	0.900*VDD	-
0	1	0	1	0.875*VDD	-
0	1	1	0	0.850*VDD	-
0	1	1	1	0.825*VDD	-
1	0	0	0	0.800*VDD	-
1	0	0	1	0.775*VDD	-
1	0	1	0	0.750*VDD	-
1	0	1	1	0.725*VDD	-
1	1	0	0	0.700*VDD	-
1	1	0	1	0.675*VDD	-
1	1	1	0	0.650*VDD	-
1	1	1	1	0.625*VDD	-

These control data bits set VLCD voltage level (the max level voltage of LCD driving voltage).

(Note) [CT0,CT1,CT2,CT3] = [0,0,0,1], [0,0,1,0], [0,0,1,1] are disabled settings.

Avoid setting VLCD voltage under 2.5V.

And ensure "VDD - VLCD > 0.6" condition is satisfied.

Unstable IC output voltage may result if the above conditions are not satisfied.

The relationship of LCD display contrast setting and VLCD voltage

CT Setting	formula	VDD= 6.000	VDD= 5.500	VDD= 5.000	VDD= 4.500	VDD= 4.000	VDD= 3.000	V

(Note) The Segment Output Pin function is assumed to be selected for the output pins – S1/P1/G1 to S9/P9/G9, KS1/S53 to KS6/S58, KI1/S59 to KI5/S63, OSC_IN/S73. Also, COM5/S67 pin is used as Common output.

During 1 chip mode, S66/TESTIN functions as TESTIN input.

During 2 chip mode(Master with Slave), CLKIO/S64 and SYNCIO/S65 function as CLK and SYNC outputs.

To illustrate further, the states of the S21 output pin is given in the table below.

Display data					State of S21 Output Pin
D101	D102	D103	D104	D105	
0	0	0	0	0	LCD Segments corresponding to COM1 to COM5 are OFF.

Figure 15. Serial Data Output Format

- (Note 1)
- 1. X = Don't care
 - 2. B0 to B3, A0 to A3: Serial Interface address

2. When SCL is stopped at the high level^(Note 2)

Figure 16. Serial Data Output Format

- (Note 2)
- 1. X = Don't care
 - 2. B0 to B3, A0 to A3: Serial Interface address
 - 3. Serial Interface address: 43H
 - 4. KD1 to KD30: Key data
 - 5. PA: Power-saving acknowledge data
 - 6. If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and Power-saving acknowledge data (PA) will be invalid.

Output Data

1. KD1 TO KD30: KEY DATA

When a key matrix of up to 30 keys is formed from the KS1 to KS6 output pins and the KI1 to KI5 input pins and one of those keys are pressed, the key output data corresponding to that key will be set to 1. The table shows the relationship between those pins and the key data bits.

Item	KI1	KI2	KI3	KI4	KI5
KS1	KD1	KD2	KD3	KD4	KD5
KS2	KD6	KD7	KD8	KD9	KD10
KS3	KD11	KD12	KD13	KD14	KD15
KS4	KD16	KD17	KD18	KD19	KD20
KS5	KD21	KD22	KD23	KD24	KD25
KS6	KD26	KD27	KD28	KD29	KD30

2. PA: Power-saving Acknowledge Data

This output data is set to the state when the key is pressed. In that case SDO will go to the low level. If serial data is input during this period and the mode is set (normal mode or power-saving mode), the IC will be set to that mode. PA is set to 1 in the power-saving mode and to 0 in the normal mode.

Power-saving Mode

Power-saving mode is set up by setting at least one of control data BU0, BU1 or BU2 set to 1. The segment outputs will all go low and the common outputs will also go low, and the oscillator on the OSC pin will stop (it will be started by a key press). This reduces power consumption. This mode is cleared by sending control data with all the BU0 BU1 and BU2 set to 0. However, note that the S1/P1/G1 to S9/P9/G9 outputs can be used as General-purpose output pins according to the state of the P0 to P3 control data bits, even in power-saving mode. (See the [Control Data Functions](#).)

Key Scan Operation Functions

1. Key Scan Timing

The key scan period is 4608T(s). To reliably determine the on/off state of the keys, the BU97540KV-M scans the keys twice and determines that a key has been pressed when the key data agrees. It outputs a key data read request (a low level on SDO) 9840T(s) after starting a key scan. If the key data does not agree and a key was pressed at that point, it scans the keys again. Thus the BU97540KV-M cannot detect a key press shorter than 9840T(s).

Figure 17. Key Scan Timing^(Note)

(Note) In power-saving mode, the high/low state of these pins is determined by the BU0 to BU2 bits in the control data. Key scan output signals are not output from pins that are set "L".

2. In Normal Mode

The pins KS1 to KS6 are set "H".

When a key is pressed a key scan is started and the keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for longer than 9840T(s) (Where $T = 1/f_{osc}$) the BU97540KV-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set high.

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU97540KV-M performs another key scan. Also note that SDO, being an open-drain output, requires a pull-up resistor (between 1 kΩ and 10kΩ).

Figure 18. Key scan operation in normal mode

Key Scan Operation Functions – continued

3. In Power-saving Mode

The pins KS1 to KS6 are set to high or low by the BU0 to BU2 bits in the control data. (See the [Control Data Functions](#) for details.)

If a key on one of the lines corresponding to a KS1 to KS6 pin which is set high is pressed, the oscillator on the OSC pin is started and a key scan is performed. Keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for $9840T(s)$ (Where $T = 1 / f_{OSC}$) or more the BU97540KV-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set high.

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU97540KV-M performs another key scan. However, this does not clear sleep mode. Also note that SDO, being an open-drain output, requires a pull-up resistor (between 1kΩ and 10kΩ).

Power-saving mode key scan example

Example: BU0 = 0, BU1 = 0, BU2 = 1 (Only KS6 high level output)

(Note)

These diodes are required to reliably recognize multiple key presses on the KS6 line when power-saving mode state with only KS6 high, as in the above example. That is, these diodes prevent incorrect operations due to sneak currents in the KS6 key scan output signal when keys on the KS1 to KS5 lines are pressed at the same time.

Figure 19. Key scan operation in Power-saving mode

Multiple Key Presses

Although the BU97540KV-M is capable of key scanning without inserting diodes for dual key presses, triple key presses on the KI1 to KI5 input pin lines, or multiple key presses on the KS1 to KS6 output pin lines, multiple presses other than these cases may result in keys that were not pressed recognized as having been pressed. Therefore, a diode must be inserted in series with each key. Applications that do not recognize multiple key presses of three or more keys should check the key data for three or more 1 bit and ignore such data.

Controller Key Data Read Techniques

When the controller receives a key data read request from BU97540KV-M, it performs a key data read acquisition operation using either the Timer Based Key Data Acquisition or the Interrupt Based Key Data Acquisition.

Timer Based Key Data Acquisition Technique

Under the Timer Based Key Data Acquisition Technique, the controller uses a timer to determine the states of the keys (on or off) and read the key data. Please refer to the flowchart below.

Key data read processing: Refer to [“Serial Data Output”](#)

Figure 20. Flowchart

In this technique, the controller uses a timer to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low every t_7 period without fail. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation.

The period t_7 in this technique must satisfy the following condition.

$$t_7 > t_4 + t_5 + t_6$$

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

t_3 : Key scan execution time when the key data agreed for two key scans. (9840T[s])

t_4 : Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. (19680T[s])

t_5 : Key address (43H) transfer time

t_6 : Key data read time

Figure 21. Timer based key data read operation

Interrupt Based Key Data Acquisition Technique

Under the Interrupt Based Key Data Acquisition Technique, the controller uses interrupts to determine the state of the keys (on or off) and read the key data. Please refer to the flow chart diagram below.

Key data read processing: Refer to [“Serial Data Output”](#)

Figure 22. Flowchart

Interrupt Based Key Data Acquisition Technique – continued

In this technique, the controller uses interrupts to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation. After that the next key on/off determination is performed after the time t_8 has elapsed by checking the SDO state when SCE is low and reading the key data. The period t_8 in this technique must satisfy $t_8 > t_4$.

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

t_3 : Key scan execution time when the key data agreed for two key scans. (9840T[s])

t_4 : Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. (19680T[s])

t_5 : Key address (43H) transfer time

t_6 : Key data read time

Oscillation Stabilization Time of the Internal Oscillation Circuit

It must be noted that the oscillation of the internal oscillation circuit is unstable for a maximum of 100 μ s (oscillation stabilization time) after oscillation has started.

Figure 38. Oscillation Stabilization Time

Power-saving mode operation in external clock mode

After receiving [BU0,BU1,BU2]=[1,1,1], BU97540KV-M enter to Power-saving mode synchronized with frame then Segment and Common ports output VSS level.

Therefore, in external clock mode, it is necessary to input the external clock based on each frame frequency setting after sending [BU0,BU1,BU2]=[1,1,1].

For the required number of clock, refer to "Control Data Functions 6. FC0, FC1, FC2 and FC3".

For example, please input the external clock as below.

[FC0,FC1,FC2,FC3]=[0,0,0,0]: In case of fosc/12288 setting, it needs over 12288clk,

[FC0,FC1,FC2,FC3]=[0,1,0,1]: In case of fosc/4608 setting, it needs over 4608clk,

[FC0,FC1,FC2,FC3]=[1,1,1,1]: In case of fosc/1536 setting, it needs over 1536clk

Please refer to the timing chart below.

Voltage Detection Type Reset Circuit (VDET)

The Voltage Detection Type Reset Circuit generates an output signal that resets the system when power is applied for the first time and when the power supply voltage drops that is, for example, the power supply voltage is less than or equal to the power down detection voltage ($V_{DET} = 1.8V$ typ). To ensure that this reset function works properly, it is recommended that a capacitor be connected to the power supply line so that both the power supply voltage (VDD) rise time when power is first applied and the power supply voltage (VDD) fall time when the voltage drops are at least 1ms.

To refrain from data transmission is strongly recommended while power supply is rising up or falling down to prevent from the occurrence of disturbances on transmission and reception.

Figure 39. VDET Detection Timing

Power supply voltage VDD fall time: $t1 > 1ms$

Power supply voltage VDD rise time: $t2 > 1ms$

Internal reset power supply retain time: $t3 > 1ms$

Reset Condition

When BU97540KV-M is initialized, the internal status after power supply has been reset as the following table.

Instruction	At Reset Condition
Key Scan Mode	[KM0,KM1,KM2] = [1,1,1]: Keyscan no use
S1/P1/G1 to S9/P9/G9 Pin	[P0,P1,P2,P3] = [0,0,0,0]: all segment output
Inversion Mode	FL = 0: Line Inversion
LCD Bias	DR = 0:1/3 bias
CLKIO/S64, SYNCIO/S65 Pin	SS = 0:Segment output
LCD Duty	[DT0,DT1] = [0,1]:1/4 Duty
DISPLAY Frequency	[FC0,FC1,FC2,FC3] = [0,0,0,0]: fosc / 12288
Display Clock Mode	OC = 0:Internal oscillator
LCD Display	SC = 1: OFF
Power PinMode	[BU0, BU1, BU2] = [1,1,1]: Power saving mode
COM5/S67 to COM1/S71 Pin	SSC = 0:Segment output
PWM/GPO Output	PGx = 0:PWM output(x = 1 ~ 9)
PWM Frequency	[PF0,PF1,PF2,PF3,PF4] = [0,0,0,0,0]: fosc / 4096
PWM Duty	[Wn0 ~ Wn8] = [0,0,0,0,0,0,0,0,0]:0/256)xTp (n = 1 ~ 9, Tp = 1/fp)
Display Contrast Setting	[CT0,CT1,CT2,CT3] = [0,0,0,0]: VLCD Level is 1.00*VDD

Operational Notes

1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.

2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Separate the ground and supply lines of the digital and analog blocks to prevent noise in the ground and supply lines of the digital block from affecting the analog block. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.

3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.

4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.

5. Recommended Operating Conditions

These conditions represent a range within which the expected characteristics of the IC can be approximately obtained. The electrical characteristics are guaranteed under the conditions of each parameter.

6. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.

7. Operation Under Strong Electromagnetic Field

Operating the IC in the presence of a strong electromagnetic field may cause the IC to malfunction.

8. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.

9. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

Operational Notes – continued**10. Unused Input Pins**

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.

11. Regarding the Input Pin of the IC

In the construction of this IC, P-N junctions are inevitably formed creating parasitic diodes or transistors. The operation of these parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions which cause these parasitic elements to operate, such as applying a voltage to an input pin lower than the ground voltage should be avoided. Furthermore, do not apply a voltage to the input pins when no power supply voltage is applied to the IC. Even if the power supply voltage is applied, make sure that the input pins have voltages within the values specified in the electrical characteristics of this IC.

Notice

Precaution on using ROHM Products

1. If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment ^(Note 1), aircraft/spacecraft, nuclear power controllers, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
 - [a] Installation of protection circuits or other protective devices to improve system safety
 - [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure
3. Our Products are not designed under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
 - [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
 - [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
 - [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
 - [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
 - [f] Sealing or coating our Products with resin or other coating materials
 - [g] Use of our Products without cleaning residue of flux (Exclude cases where no-clean type fluxes is used. However, recommend sufficiently about the residue.); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
 - [h] Use of the Products in places subject to dew condensation
4. The Products are not subject to radiation-proof design.
5. Please verify and confirm characteristics of the final or mounted products in using the Products.
6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse, is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
7. De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
8. Confirm that operation temperature is within the specified range described in the product specification.
9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
2. In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of ionizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
 - [a] the Products are exposed to sea winds or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - [b] the temperature or humidity exceeds those recommended by ROHM
 - [c] the Products are exposed to direct sunshine or condensation
 - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

A two-dimensional barcode printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

General Precaution

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
