

Skinny LED RGB Strip - Addressable, 1m, 144LEDs (SK6812)

COM-14732

★★★★★ 3

DESCRIPTION

FEATURES

DOCUMENTS

- Operating Voltage: 5VDC
- Beam Angle: 120 deg.
- Consumption Watts: 34W/m (Max)
- LED Quantity: 144 pcs
- PCB Thickness: 7.2mm wide, 0.3mm thickness
- 3-pin JST-SM connector
- 3M Adhesive Tape on Back

★★★★★ Great skinny strips, worked perfect!

about a year ago by [Member #1481955](#) ✓ verified purchaser

I use these for lightsaber builds and the are perfect. They seem to work with most lightsaber soundboard manufacturers and nice and thin.

★★★★★ Great for putting high-density RGB lighting in small applications

about 11 months ago by [Member #260118](#) ✓ verified purchaser

I use these SK6812s for all sorts of projects, from adding accent lighting to rooms to infinity mirrors and wearable projects. Having individually addressable LEDs makes wiring and Arduino programming a breeze.

I also found that you can add waterproofing by coating the strip with a liquid rubber (I actually use Flex Seal of all things and it works great for waterproofing and insulating the electronics)

★★★★★ Excellent strip for light sabre construction.

about 3 months ago by [Member #1557668](#) ✓ verified purchaser

Skinny strips are much easier to fit into foam diffuser but are harder to solder connections to.
