Power Loss

Power loss $P_{\text{loss(max.)}}$ (note)

When selecting glass cartridge fuses, make sure that the maximum power loss listed below is not exceeded. The power loss is determined according to IEC or EN 60947-7-3/VDE 0611-6 at 23°C. The temperature rise of the terminal block must be checked according to their application and mounting. Higher ambient temperatures represent an additional impact on miniature fuses. Therefore, in such applications, the rated current must be reduced if necessary. More details are available from the manufacturers.

Installation Notes

Using fuse plugs with rail-mount terminal blocks for control circuit protection is highly advantageous because the function and wiring levels are separated:

- No additional cost for assembly and wiring
 - No risk of accidental contact with live parts when disconnecting the fuse plug
 - The fuse plug is completely separated from the carrier terminal block when replacing a fuse – away from current carrying parts
 - The fuse plug can be removed by service personnel
 - No unintentional reclosing of the circuit by another person
 - Quickly exchange a fuse by using a prepared "stand-by plug"
- Fuse plug features for quick and safe applications:

- Optional LED indicates blown fuse.
- Top-of-unit marking slot provides clear carrier terminal block identification.
- Two test slots with touch contacts
- Terminal blocks/plugs provide high-density wiring in a width of just 5.2/6.1 mm.
- May be used as a disconnect plug in combination with a shorting link.

Fuse plug dimensions:

66.1 mm / 2.62 inch for 2002-1661

76.8 mm / 3.02 inch for 2002-1761

87.5 mm / 3.45 inch for 2002-1861

72.9 mm / 2.87 inch for 2002-1961

with inserted fuse plug

Open side of terminal block left

Please note:

The extra width of the plug (6.1 mm compared to 5.2 mm for carrier terminal blocks) must be compensated for with intermediate plates (1 mm) when building an assembly of carrier terminal blocks equipped with fuse plugs.
