

Inductors for NFC circuits/Standard circuits

Multilayer ferrite

MLJ series

MLJ1608W type

FEATURES

- Response to large currents with newly-developed ferrite materials.
- Narrow tolerance response with high-accuracy multiple layers.
- Significant reductions of high-frequency loss due to the adoption of low-loss materials.
- Operating temperature range: -55 to +125°C

APPLICATION

- NFC circuits for devices such as smartphones and PCs, and power lines for electronic devices.

PART NUMBER CONSTRUCTION

MLJ	1608	W	R16	△	T	000
Series name	L x W x H dimensions 1.6 x 0.8 x 0.8 mm	Characteristics	Inductance (nH)	Inductance tolerance	Packaging style	Internal code

* The "△" of the Part Number contains the inductance tolerance code, J (±5%), K (±10%).

CHARACTERISTICS SPECIFICATION TABLE

The graph illustrates the temperature profile over time for a soldering process. The y-axis represents Temperature and the x-axis represents Time. The process is divided into three main stages:

- Preheating:** The temperature rises from 150°C to 180°C. This stage is shaded light blue and has a duration of 60 to 120s.
- Soldering:** The temperature rises from 180°C to a peak of 250 to 260°C and then falls back to 230°C. This stage is shaded light blue and has a duration of 30 to 60s. The peak temperature is labeled 'Peak' and the time at the peak is labeled '10s max.'.
- Natural cooling:** The temperature falls from 230°C. This stage is shaded light blue.

* The storage temperature range is for after the assembly.

REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products

REMINDERS

- The storage period is within 12 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 10 to 75% RH or less).
If the storage period elapses, the soldering of the terminal electrodes may deteriorate.
- Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).
- Before soldering, be sure to preheat components.
The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperature does not exceed 150°C.
- Soldering corrections after mounting should be within the range of the conditions determined in the specifications.
If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.
- When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.
- Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermal design.
- Carefully lay out the coil for the circuit board design of the non-magnetic shield type.
A malfunction may occur due to magnetic interference.
- Use a wrist band to discharge static electricity in your body through the grounding wire.
- Do not expose the products to magnets or magnetic fields.
- Do not use for a purpose outside of the contents regulated in the delivery specifications.
- The products listed on this catalog are intended for use in general electronic equipment (AV equipment, telecommunications equipment, home appliances, amusement equipment, computer equipment, personal equipment, office equipment, measurement equipment, industrial robots) under a normal operation and use condition.
The products are not designed or warranted to meet the requirements of the applications listed below, whose performance and/or quality require a more stringent level of safety or reliability, or whose failure, malfunction or trouble could cause serious damage to society, person or property.
If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in the each catalog, please contact us.

- (1) Aerospace/aviation equipment
- (2) Transportation equipment (cars, electric trains, ships, etc.)
- (3) Medical equipment
- (4) Power-generation control equipment
- (5) Atomic energy-related equipment
- (6) Seabed equipment

- (7) Transportation control equipment
- (8) Public information-processing equipment
- (9) Military equipment
- (10) Electric heating apparatus, burning equipment
- (11) Disaster prevention/crime prevention equipment
- (12) Safety equipment
- (13) Other applications that are not considered general-purpose applications

When designing your equipment even for general-purpose applications, you are kindly requested to take into consideration securing protection circuit/device or providing backup circuits in your equipment.
