

Helping Customers Innovate, Improve & Grow

VT-800

Description

Vectron's VT-800 Temperature Compensated Crystal Oscillator (TCXO) is a quartz stabilized, clipped sine wave output, temperature compensated oscillator, operating off either 2.8, 3.0, 3.3 or 5.0 volt supply, hermetically sealed 5x3.2 mm ceramic package.

Features

- Clipped Sine Wave Output
- Output Frequencies to 40 MHz
- Fundamental Crystal Design
- Optional VCXO Function available
- Gold over nickel contact pads
- Hermetically Sealed Ceramic SMD package
- Product is compliant to RoHS directive  and fully compatible with lead free assembly

Applications

- Wireless Communications
- Base Stations
- Point to point radios
- Broadband Access
- Test Equipment
- Handsets

Block Diagram

Specifications

Table 1. Electrical Performance

Parameter	Symbol	Min.	Typ	Max	Units
Output Frequency, +5V option +2.8, +3.0, +3.3V options	f_o	10 10		27 40	MHz
Supply Voltage ¹	V_{DD}	+2.8, +3.0, +3.3 or +5.0			V
Supply Current, 10 to 14.999MHz 15.000 to 25.999MHz 26.000 to 40.000MHz	I_{DD}			1.5 2.0 2.5	mA
Operating Temperature, <i>ordering option</i>	T_{OP}	0/55, -10/60, -20/70, -30/80, -40/85			°C
Stability Over T_{OP} , <i>ordering option</i>		$\pm 0.5, \pm 1.0, \pm 1.5, \pm 2.0, \pm 2.5, \pm 3.0, \pm 4.0, \pm 5.0$			ppm
Initial Accuracy ² , "No Adjust" Option				± 1.0	ppm
Power Supply Stability				± 0.2	ppm
Load Stability				± 0.2	ppm
Aging				± 1.0	ppm/yr
Pull Range, <i>ordering option</i>	TPR	$\pm 5.0, \pm 8.0, \pm 10.0, \pm 12.0$			ppm
Control Voltage to Reach Pull Range		0.5		2.5	V
Control Voltage Impedance		1			Mohm
Output Level ³	V_o p/p	0.8			V
Output Load				10K 10pF	
Phase Noise ⁴ , 10.000MHz 10Hz 100Hz 1kHz 10kHz 100kHz			-91 -116 -137 -149 -150		dBc/Hz
Start Up Time				10	ms
Package		5.0x3.2x1.5			mm

1. The VT-800 power supply pin should be filtered, eg, a 0.1 and 0.01uf capacitor

2. Initial Accuracy is before IR reflow. Allow an additional ± 1 ppm shift through 2 reflows, after 24 hours

3. The Output is DC coupled

4. Measured at room ambient temperature using an Agilent E5052 Signal Source Analyzer

Table 2. Pinout

Pin #	Symbol	Function
1	V_C	TCXO Control Voltage or No Connect
2	GND	Electrical and Lid Ground
3	f_o	Output Frequency
4	V_{DD}	Supply Voltage

VCXO Feature: The VT-800 can be ordered with a VCXO function for applications where it will be used in a PLL, or the output frequency needs fine tune or calibration adjustments. This is a high impedance input, 1Mohm, and can be driven with an op-amp or terminated with adjustable resistors etc. **Pin 1 should not be left floating on the VCXO optional device.**

“No Adjust” Option: In applications where the VT-800 will not be used in a PLL, or the output frequency does not need fine tune adjustments, the best device to use would be a VT-800-xxx-xxx0. By using the “no adjust” option, the circuit is simplified as V_C does not need to be adjusted or set to a predetermined voltage and pin 1 should be grounded (pin 1 can be left open but should not be set to a voltage such as an RF signal or power supply voltage.)

Clipped Sine Wave Output

Phase Noise at 10MHz

Maximum Ratings

Absolute Maximum Ratings and Handling Precautions

Stresses in excess of the absolute maximum ratings can permanently damage the device. Functional operation is not implied or any other excess of conditions represented in the operational sections of this data sheet. Exposure to absolute maximum ratings for extended periods may adversely affect device reliability.

Although ESD protection circuitry has been designed into the VT-800, proper precautions should be taken when handling and mounting. VI employs a Human Body Model and Charged Device Model for ESD susceptibility testing and design evaluation.

ESD thresholds are dependent on the circuit parameters used to define the model. Although no industry standard has been adopted for the CDM a standard resistance of 1.5kOhms and capacitance of 100pF is widely used and therefor can be used for comparison purposes.

Table 3. Maximum Ratings			
Parameter	Symbol	Rating	Unit
Storage Temperature	T_{STORE}	-55/125	°C
Supply Voltage	V_{DD}	-0.6/6	V
Control Voltage	V_C	-0.6/ V_{DD} +0.6	V
ESD, Human Body Model		1500	V
ESD, Charged Device Model		1000	V

Table 4. Environmental Compliance	
Parameter	Condition
Mechanical Shock	MIL-STD-883 Method 2002
Mechanical Vibration	MIL-STD-883 Method 2007
Temperature Cycle	MIL-STD-883 Method 1010
Solderability	MIL-STD-883 Method 2003
Fine and Gross Leak	MIL-STD-883 Method 1014
Resistance to Solvents	MIL-STD-883 Method 2015
Moisture Sensitivity Level	MSL1
Contact Pads	Gold (0.3um min - 1.0um max) over Nickel
Weight	60 mg

IR Compliance

Suggested IR Profile

Devices are built using lead free epoxy and can be subjected to standard lead free IR reflow conditions shown in Table 5. Contact pads are gold over nickel and lower maximum temperatures can also be used, such as 220C.

Table 5. Reflow Profile		
Parameter	Symbol	Value
PreHeat Time	t_s	200 sec Max
Ramp Up	R_{UP}	3°C/sec Max
Time above 217°C	t_L	150 sec Max
Time to Peak Temperature	t_{AMB-P}	480 sec Max
Time at 260°C	t_P	30 sec Max
Time at 240°C	t_{P2}	60 sec Max
Ramp down	R_{DN}	6°C/sec Max

Revision History

Revision Date	Approved	Description
Aug 10, 2018	FB	Update logo and contact information, add "SNPBDIP" ordering option
June 10, 2019	FB	Update logo and contact information, change "SNPBDIP" ordering option to "SNPB," update tape and reel width to 12mm
April 30, 2020	FB	Add tape and reel ordering option

Previous Ordering Information for Reference Only Do Not Use to Build a New Part Number

The ordering codes for the VTC4 were changed in 2016. If you had ordered a specific code based off this ordering method, it is still available for purchase under the old code however no new part numbers will be created using this system.

Due to the change in the 8th character from numeric to alphabetic, there is no opportunity for overlap between the two ordering methods.
