

2.5-V 460-kbps RS-232 TRANSCEIVER WITH ± 15 -kV ESD PROTECTION

Check for Samples: [MAX3318E](#)

FEATURES

- **ESD Protection for RS-232 I/O Pins**
 - ± 15 kV (Human-Body Model)
 - ± 8 kV (IEC 61000-4-2, Contact Discharge)
 - ± 15 kV (IEC 61000-4-2, Air-Gap Discharge)
- **300- μ A Operating Supply Current**
- **1- μ A Low-Power Standby (With Receivers Active) Mode**
- **Designed to Transmit at a Data Rate of 460 kbps**
- **Auto-Power-Down Plus Option Features**
Flexible Power-Saving Mode
- **Operates From a Single 2.25-V to 3-V V_{cc} Supply**

APPLICATIONS

- **Battery-Powered Systems**
- **PDAs**
- **Cellular Phones**
- **Notebooks**
- **Hand-Held Equipment**
- **Pagers**

DESCRIPTION

The MAX3318E is a dual-driver, dual-receiver, RS-232-compatible transceiver. The device features auto-power-down plus and enhanced electrostatic discharge (ESD) protection integrated into the chip. Driver output and receiver input are protected to ± 15 kV using the IEC 61000-4-2 Air-Gap Discharge method, ± 8 kV using the IEC 61000-4-2 Contact Discharge method, and ± 15 kV using the Human-Body Model (HBM).

The device operates at a data rate of 460 kbps. The transceiver has a proprietary low-dropout driver output stage, enabling RS-232-compatible operation from a 2.25-V to 3-V supply with a dual charge pump. The charge pump requires only four 0.1- μ F capacitors and features a logic-level output (READY) that asserts when the charge pump is regulating and the device is ready to begin transmitting.

The MAX3318E achieves a 1- μ A supply current using the auto-power-down feature. This device automatically enters a low-power power-down mode when the RS-232 cable is disconnected or the drivers of the connected peripherals are inactive for more than 30 s. The device turns on again when it senses a valid transition at any driver or receiver input. Auto power down saves power without changes to the existing BIOS or operating system.

This device is available in two space-saving packages: 20-pin SSOP and 20-pin TSSOP.

DB OR PW PACKAGE
(TOP VIEW)

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

 This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

 ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

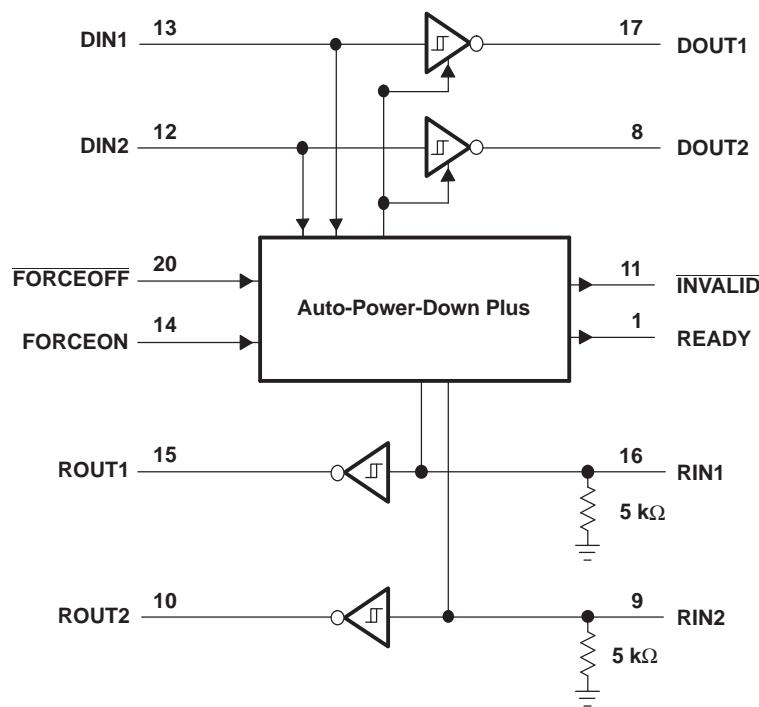

DETAILED DESCRIPTION

Flexible control options for power management are featured when the serial port and driver inputs are inactive. The auto-power-down plus feature functions when **FORCEON** is low and **FORCEOFF** is high. During this mode of operation, if the device does not sense valid signal transitions on all receiver and driver inputs for approximately 30 s, the built-in charge pump and drivers are powered down, reducing the supply current to 1 μ A. By disconnecting the serial port or placing the peripheral drivers off, auto-power-down plus can be disabled when **FORCEON** and **FORCEOFF** are high. With auto-power-down plus enabled, the device activates automatically when a valid signal is applied to any receiver or driver input. **INVALID** is high (valid data) if any receiver input voltage is greater than 2.7 V or less than -2.7 V, or has been between -0.3 V and 0.3 V for less than 30 μ s (typical number). **INVALID** is low (invalid data) if all receiver input voltage are between -0.3 V and 0.3 V for more than 30 μ s (typical number).

TERMINAL			DESCRIPTION
NAME	NO.		
C1+	2		Positive voltage-doubler charge-pump capacitor
C1-	4		Negative voltage-doubler charge-pump capacitor
C2+	5		Positive inverting charge-pump capacitor
C2-	6		Negative inverting charge-pump capacitor
DIN	12, 13		CMOS driver inputs
DOUT	8, 17		RS-232 driver outputs
FORCEOFF	20		Force-off input, active low. Drive low to power down transmitters and charge pump. This overrides auto power down and FORCEON (see Function Table).
FORCEON	14		Force-on input, active high. Drive high to override auto power down, keeping transmitters on (FORCEOFF must be high) (see Function Table).
GND	18		Ground
INVALID	11		Valid signal detector output, active low. A logic high indicates that a valid RS-232 level is present on a receiver input.
READY	1		Ready to transmit output, active high. READY is enabled high when V- goes below -3.5 V and the device is ready to transmit.
RIN	9, 16		RS-232 receiver inputs
ROUT	10, 15		CMOS receiver outputs
V+	3		$2 \times V_{CC}$ generated by the charge pump
V-	7		$-2 \times V_{CC}$ generated by the charge pump
V _{CC}	19		2.25-V to 3-V single-supply voltage

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) V_+ and V_- can have maximum magnitudes of 7 V, but their absolute difference cannot exceed 13 V.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

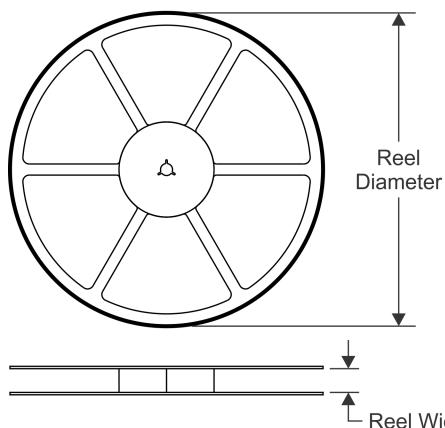

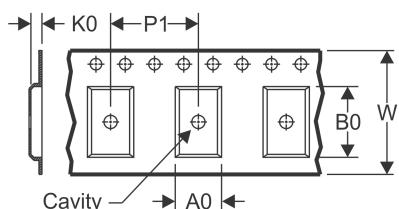

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

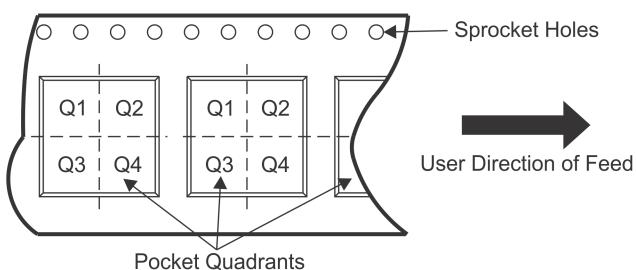

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
