

### PRODUCT OVERVIEW

The ADC-228A combines analog front-end circuitry and a flash A/D converter to digitize high-speed analog signals at a rate of 20 million samples per second. The ADC-228A contains an 8-bit, 20MHz, flash A/D, a wideband analog input buffer, a precision voltage reference, temperature compensation circuitry, reference trims, and a three-state output buffer in a 24-pin package.

The ADC-228A offers significant savings by

combining all of the circuitry in a single package. Valuable board real estate is saved, and design time and manufacturing costs are reduced.

The ADC-228A is housed in a 24-pin ceramic DDIP package and is available in the commercial, 0 to +70°C, or military, -55 to +125°C, temperature ranges. A MIL-STD-883 version is also available. Operation is from  $\pm 15V$  and +5V power supplies.

### FEATURES

- 8-Bit flash A/D converter
- 20MHz sampling rate
- Complete support circuitry
- Low power, 900mW
- Sample-hold not required
- Three-state outputs
- MIL-STD-883 versions

### TECHNICAL NOTES

1. Rated performance requires using good high-frequency techniques. The analog and digital ground pins are connected to each other internally. Avoid ground related problems by connecting the grounds to one point, the ground plane beneath the converter. Due to the inductance and resistance of the power supply return paths, return the analog and digital ground separately to the power supplies.
2. Bypass all the analog and digital supplies and the +5V REFERENCE (pin 3) to ground with a 4.7µF, 25V tantalum electrolytic capacitor in parallel with a 0.1µF ceramic capacitor.

\* DATEL's initial qualification was done at 15MSPS and as a Mil-STD-883 Class G product per customer request. Mil-STD-883 Class G allows for a reduced temperature range (-55°C to +105°C) that applies to this device. Contact DATEL if a 20MSPS rate or a Mil-STD-883 Class H (-55°C to +125°C) temperature range is desired.
