

12V/8A, active clamp forward converter, Power Over Ethernet (PoE) IEEE 802.3bt compliant reference design

Features

- Features of the **PM8805** PoE-PD interface:
 - System in package integrating a double active bridge, a hot-swap MOSFET and a PoE-PD
 - Supports legacy high power, 4-pair applications
 - 100 V N-ch MOSFETs with 0.2 Ω total path resistance for each active bridge
 - Identifies which kind of PSE (standard or legacy) is connected to, and provides successful IEEE802.3 af /at /bt classification indication as combination of the T0, T1 and T2 signals (open drain)
 - Smart operational mode selection through the STBY, FAUX and RAUX control signals
 - QFN 56 8x8mm package with 43 pins and 6 exposed pads
- Features of the **PM8804** PWM controller:
 - PWM peak current mode controller
 - Input operating voltage up to 75 V
 - Internal high voltage start up regulator with 20 mA capability
 - Programmable fixed frequency up to 1 Mhz
 - Soft start up with adjustable time
 - Soft turn off (optionally disabled)
 - Dual 1 A_{PK}, low side complementary gate drivers
 - GATE2 optionally turned off for reduced consumption
 - 80% maximum duty cycle with internal slope compensation
 - QFN 16 3x3mm package with exposed pad

Product summary	
High power PoE PD, 12 V up to 8 A active clamp forward evaluation board	STEVAL-POE005V1
PWM peak current mode controller for PoE and telecom systems	PM8804
IEEE802.3bt PoE-PD interface with integrated dual-active bridge	PM8805

Description

This reference design represents a 12 V, 8 A converter solution ideal for various applications including building safety and security or surveillance, with a PoE-PD interface and a DC-DC active clamp forward converter.

The PoE-PD interface is based on the **PM8805** system in package device with two active bridges and an IEEE 802.3bt compliant Powered Device (PD) interface. It can be used in all medium-to-high power 2P and 4P high efficiency PoE and PoE+ applications.

The DC-DC active clamp forward converter is designed around the **PM8804** PWM controller, which is an integrated solution for smart and efficient 48 V converters, featuring a programmable oscillator for the switching frequency, adjustable slope compensation, dual complementary low-side drivers with programmable dead time, programmable soft start, soft turn off and a programmable current sense blanking time.

1 Efficiency

The **STEVAL-POE005V1** reference design consists of a PoE interface compliant with the IEEE 802.3bt standard and a forward active clamp DC-DC converter that receives DC voltage from the PoE interface.

The figure below shows the efficiency of a single forward converter and the overall efficiency including the PoE interface power losses.

Figure 1. STEVAL-POE005V1 overall and DC-DC forward efficiency

The dotted lines indicate the **STEVAL-POE005V1** efficiency at different DC input voltages applied to RJ45 connector J1. The continuous line indicates the DC-DC forward efficiency, which does not include the following losses associated with the PoE interface section:

- RJ45 connector J1
- PoE data transformer T1
- common chokes T7 and T8 placed on the two power supply pairs
- **PM8805** interface that integrates the dual power MOS bridges and a hot swap MOSFET
- Forward converter input filter

This efficiency is measured between output test points TP8/TP9 and input test points TP5/TP6 of the forward converter.
