DESCRIPTION

INCLUDES

FEATURES

DOCUMENTS

The Argon is a powerful Wi-Fi enabled development kit that can act as either a standalone Wi-Fi endpoint or Wi-Fi enabled gateway for Particle Mesh networks. It is based on the Nordic nRF52840 and has built-in battery charging circuitry so it's easy to connect a Li-Po and deploy your local network in minutes.

The Argon is great for connecting projects to the Particle Device Cloud or as a gateway to connect an entire group of local endpoints. It's everything you love about the Photon, with more features like Bluetooth and mesh networking.

All Particle Hardware is designed from the ground up to work with the Device Cloud; a powerful set of tools and infrastructure to build, connect, and manage your IoT fleet. The Device Cloud for Particle Mesh is priced by network. All Particle customers get 10 free micro networks using a Wi-Fi or Ethernet gateway. A micro network is defined as a network with 10 total devices and a single gateway.
