

EPC2035 – Enhancement Mode Power Transistor

 V_{DS} , 60 V $R_{DS(on)}$, 45 mΩ I_D , 1.7 A

Gallium Nitride's exceptionally high electron mobility and low temperature coefficient allows very low $R_{DS(on)}$, while its lateral device structure and majority carrier diode provide exceptionally low Q_G and zero Q_{RR} . The end result is a device that can handle tasks where very high switching frequency, and low on-time are beneficial as well as those where on-state losses dominate.
