# **Bluetooth Module**

# ABBTM-NVC-MDCS42A

## Moisture Sensitivity Level (MSL) – Level 3

Note: MSL3 packaging applies to MOQ of (50) units. Devices sold in less than MOQ quantities will be provided in an ESD bag with Desiccant.

#### **FEATURES:**

- Bluetooth V2.1+EDR (class2)
- TX power +4dbm, / -84dBm RX sensitivity
- Onboard Meander line PCB antenna support 10 meters
- Support sniff and deep sleep mode
- Supports master and slave
- Supports Bluetooth profiles SPP, HID, DUN, OPP, iAP ver Bluetooth
- UART and USB programming and data interfaces
- I2C Master interface
- Support Apple iAP protocol
- PCM digital audio interfaces
- 8MBit onboard flash
- 25.80x13.40x2.2mm
- BQB/FCC/CE Certified\*

\*Note: ABBTM-NVC-MDCS42A crosses to NovaComm P/N: NVC-MDCS42A. BQB/FCC/CE certification documentation is under P/N: NVC-MDCS42A.

## **GENERAL DESCRIPTION**

ABBTM-NVC-MDCS42A is a class 2 Bluetooth® 2.1+EDR (Enhanced Data Rates) module, based on NovaComm's proprietary technology. It is a highly integrated and sophisticated module which contains all the necessary elements from radio to antenna and a fully implemented protocol stack. It is an ideal solution for integrating Bluetooth® into various products with limited knowledge of Bluetooth® and RF technologies.

With NovaComm's iNova® bluetooth stack firmware, designers can easily customize their applications to support different Bluetooth profiles, such as SPP, HID, DUN, OPP.

This module can also interface with Apple's Authentication Coprocessor and build an iAP over Bluetooth application.

## PIN CONFIGURATION:

## ► APPLICATIONS:

(Pb)

- Cable replacement
- Bar code and RFID scanners
- Measurement and monitoring systems

**RoHS/RoHS II compliant** 

- Industrial sensors and controls
- Medical devices
- Industrial PCs and laptops

## **PIN DESCRIPTION**

## **ELECTRICAL CHARACTERISTICS**

#### **Absolute Maximum Rating**

Rating	Min	Max	Unit
Storage Temperature	-40	+120	°C
PIO/AIO Voltage	-0.4	+3.7	V
VDD Voltage	-0.4	+3.7	V
Other Terminal Voltages except RF	-0.4	VDD+0.4	V

## **Recommended Operating Conditions**

<b>Operating Condition</b>	Min	Тур	Max	Unit
Operating Temperature Range	-40		+85	°C
VDD Voltage	+2.7	+3.3	+3.7	V

## **Power Consumptions**

Operating Condition	Min	Тур	Max	Unit
Radio On <sup>*</sup> (Discovery)		23		mA
Radio On <sup>*</sup> (Inquiry window time)		35		mA
Connected (Deep sleep disable, sniff enable)	1.4	3	11	mA
Connected (Deep sleep enable, sniff enable)	0.04	2.4	11	mA
Connected with data transfer	3	10	15	mA

\* Note :

Power consumption depends on the firmware used. Typical values are shown in the table.

Sniff mode ----- In Sniff mode, the duty cycle of the slave's activity in the piconet may be reduced. If a slave is in active mode on an ACL logical transport, it shall listen in every ACL slot to the master traffic, unless that link is being treated as a scatter net link or is absent due to hold mode. With sniff mode, the time slots when a slave is listening are reduced, so the master shall only transmit to a slave in specified time slots. The sniff anchor points are spaced regularly with an interval of Tsniff.

## > PHYSICAL INTERFACES

#### **Power Supply**

The module accepts a 3.3V DC power input.

#### Reset

The module may be reset from several sources: RESETB pin, power-on reset, a UART break character or via software configured watchdog timer.

The RESETB pin is an active low reset and is internally filtered using the internal low frequency clock oscillator. A reset will be performed between 1.5 and 4.0ms following RESETB being active. It is recommended that RESETB be applied for a period greater than 5ms.

Pin Name / Group	Pin Status on Reset
PIOs	Input with weak pull-down
AIOs	Output, driving low
PCM_OUT	Tri-stated with weak pull-down
PCM_IN	Input with weak pull-down
PCM_SYNC	Input with weak pull-down
PCM_CLK	PD
UART_TX	Output tri-stated with weak pull-up
UART_RX	Input with weak pull-down
UART_RTS	Output tri-stated with weak pull-up
UART_CTS	Input with weak pull-down
USB_DP	Input with weak pull-down
USB_DN	Input with weak pull-down
SPI_CSB	Input with weak pull-up
SPI_CLK	Input with weak pull-down
SPI_MOSI	Input with weak pull-down
SPI_MISO	Tri-stated with weak pull-down
RESETB	Input with weak pull-up

#### **Internal Antenna**

The module integrates a Meander line PCB chip antenna. There's no need to use antenna on customer's PCB. Please take precaution to leave ample clearance for the antenna (See Figure 17)

## PIO

ABBTM-NVC-MDCS42A has a total of 10 digital programmable I/O terminals. They are powered from VDD (3.3V). Their functions depend on firmware running on the device. PIO lines can be configured through software to have either weak or strong pull-ups or pull-downs.

(Pb)

#### Note:

All PIO lines are configured as inputs with weak pull-downs at reset.

Any of the PIO lines can be configured as interrupt request lines or as wake-up lines from sleep modes.

## AIO

ABBTM-NVC-MDCS42A has 2 analogue I/O terminals. Their functions depend on software. Typically ADC functions can be configured to battery voltage measurement. They can also be used as a digital PIO.

#### UART

This module has a standard UART interface which provides a simple mechanism for communicating with other serial devices using the RS232 protocol.

The UART CTS and RTS signals can be used to implement RS232 hardware flow control where both are active low indicators.

Parameter	Possible Values			
	Minimum	1200 baud (≤2%Error)		
Baud Rate	Iviiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiii	9600 baud (≤1%Error)		
	Maximum	3M baud (≤1%Error)		
Flow Control	l	RTS/CTS or None		
Parity		None, Odd or Even		
Number of Stop	1 or 2			
Bits per Byte	8			

#### **Possible UART Settings**

## I<sup>2</sup>C Master

ABRACON IS

ISO 9001:2008 CERTIFIED

PIO6, PIO7 and PIO8 can be used to form a master I<sup>2</sup>C interface. The interface is formed using software to drive these lines. It is suited only to relatively slow functions such as driving a LCD, keyboard scanner or EEPROM. In the case, PIO lines need to be pulled up through  $2.2K\Omega$  resistors.

Figure 2. Example EEPROM Connection with I<sup>2</sup>C Interface

## **SPI Interface**

The synchronous serial port interface (SPI) is used for flash/debug the module only. It cannot be used for any user functionality. Please always design test points for this interface on the PCB in case there is need to re-flash the module or flash-in-field in manufacture.

#### **PCM Interface**

PCM is a standard method used to digitize audio (particularly voice) for transmission over digital communication channels. Through its PCM interface, the module has hardware support for continual transmission and reception of PCM data, thus reducing processor overhead for applications. The module offers a bi-directional digital audio interface that routes directly into the baseband layer of the on-chip firmware. It does not pass through the HCI protocol layer.

Hardware on the module allows the data to be sent to and received from a SCO connection. Up to three SCO connections can be supported by the PCM interface at any one time.

The module can operate as the PCM interface master generating an output clock of 128, 256 or 512kHz. When configured as PCM interface slave, it can operate with an input clock up to 2048kHz. The module is compatible with a variety of clock formats, including Long Frame Sync, Short Frame Sync and GCI timing environments.

It supports 13-bit or 16-bit linear, 8-bit  $\mu$ -law or A-law companied sample formats at 8k samples/s and can receive and transmit on any selection of three of the first four slots following PCM\_SYNC.

The module interfaces directly to PCM audio devices including the following:

- Qualcomm MSM 3000 series and MSM 5000 series CDMA baseband devices
- OKI MSM7705 four channels A-law and μ-law CODEC
- Motorola MC145481 8-bit A-law and μ-law CODEC
- Motorola MC145483 13-bit linear CODEC
- STW 5093 and 5094 14-bit linear CODECs
- The module is also compatible with the Motorola SSI<sup>TM</sup> interface.

## PCM Interface Master /Slave

When PCM is configured as a master, the module generates PCM\_CLK and PCM\_SYNC.

When PCM is configured as the slave, the module accepts PCM\_CLK rates up to 2048kHz.

**RoHS/RoHS II compliant** 

(Pb)

## Long Frame Sync

Long Frame Sync is the name given to a clocking format that controls the transfer of PCM data words or samples. In Long Frame Sync, the rising edge of PCM\_SYNC indicates the start of the PCM word. When the module is configured as PCM master, generating PCM\_SYNC and PCM\_CLK, then PCM\_SYNC is 8-bits long. When the module is configured as PCM Slave, PCM\_SYNC may be from two consecutive falling edges of PCM\_CLK to half the PCM\_SYNC rate, i.e., 62.5µs long.

PCM_SYNC										
PCM_CLK										
PCM_OUT		1	2	3	4	5	6	7	8	<u> </u>
PCM_IN	Undefined	1	2	3	4	5	6	7	8	Undefined

Figure 5. Long Frame Sync (shown with 8-bit Companded Sample)

#### **Short Frame Sync**

ABRACON IS

ISO 9001:2008 CERTIFIED

Downloaded from Arrow com

In Short Frame Sync, the falling edge of PCM\_SYNC indicates the start of the PCM word. PCM\_SYNC is always one clock cycle long.

PCM_SYNC																		
PCM_CLK											$\Box$	$\Box$	$\Box$	$\Box$	$\Box$	$\Box$		
PCM_OUT		1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	10	
PCM_IN	Undefined	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	Undefined

Figure 6. Short Frame Sync (shown with 16-bit Sample)

As with Long Frame Sync, the module samples PCM\_IN on the falling edge of PCM\_CLK and transmits PCM\_OUT on the rising edge. PCM\_OUT may be configured to be high impedance on the falling edge of PCM\_CLK in the LSB position or on the rising edge.

**Bluetooth Module** 

ABBTM-NVC-MDCS42A

## **Multi-slot Operation**

More than one SCO connection over the PCM interface is supported using multiple slots. Up to three SCO connections can be carried over any of the first four slots.

LONG_PCM_SYNC	
Or SHORT_PCM_SYNC	
PCM_CLK	
PCM_OUT	1 2 3 4 5 6 7 8 1 2 3 4 5 6 7 8
PCM_IN	Do Not Care 1 2 3 4 5 6 7 8 1 2 3 4 5 6 7 8 Do Not Care

Figure 7. Multi-Slot Operation with Two Slots and 8-bit Companded Samples

## **GCI Interface**

ABRACON IS

ISO 9001:2008

CERTIFIED

Downloaded from Arrow.com.

The module is compatible with the General Circuit Interface (GCI), a standard synchronous 2B+D ISDN timing interface. The two 64Kbps B channels can be accessed when this mode is configured.

PCM_SYNC									
PCM_CLK									
PCM_OUT	1 2 3 4 5 6 7	8 1 2 3 4 5 6 7 8							
PCM_IN	Do Not 1 2 3 4 5 6 7	8 1 2 3 4 5 6 7 8 Do Not Carre							
	B1 Channel	B2 Channel							
	Figure 8. GCI In	terface							
The start of a frame is indicated by the rising edge of PCM_SYNC and runs at 8kHz. With the module in slave mode, the requency of PCM_CLK can be up to 4.096MHz.									

## **Slot and Sample Formats**

The module can receive and transmit on any selection of the first four slots following each sync pulse. Slot durations can be either 8 or 16 clock cycles. Durations of 8 clock cycles may only be used with 8-bit sample formats. Durations of 16 clocks may be used with 8-bit, 13-bit or 16-bit sample formats. The module supports 13-bit linear, 16-bit linear and 8-bit  $\mu$ -law or A-law sample formats. The sample rate is 8k samples/s. The bit order may be little or big endian. When 16-bit slots are used, the 3 or 8 unused bits in each slot may be filled with sign extension, padded with zeros or a programmable 3-bit audio attenuation compatible with some Motorola CODECs.

Figure 9. 16-bit Slot Length and Sample Formats

## **Additional Features**

The module has a mute facility that forces PCM\_OUT to be 0. In master mode, PCM\_SYNC may also be forced to 0 while keeping PCM\_CLK running which some CODECS use to control power down.

RoHS/RoHS II compliant

Figure 13. PCM Slave Timing Short Frame Sync

# **Bluetooth Module**

# ABBTM-NVC-MDCS42A

## USB

This is a full speed (12M bits/s) USB interface for communicating with other compatible digital devices. The module acts as a USB peripheral, responding to request from a master host controller, such as a PC.

The USB interface is capable of driving a USB cable directly. No external USB transceiver is required. The device operates as a USB peripheral, responding to requests from a master host controller such as a PC. Both the OHCI and the UHCI standards are supported. The set of USB endpoints implemented can behave as specified in the USB section of the Bluetooth specification v2.0+EDR or alternatively can appear as a set of endpoints appropriate to USB audio devices such as speakers.

The module has an internal USB pull-up resistor. This pulls the USB\_DP pin weakly high when module is ready to enumerate. It signals to the USB master that it is a full speed (12Mbit/s) USB device.

#### Figure 14. USB Connections

Identifier	Value	Function
R <sub>s</sub>	$27\Omega$ Nominal	Impedance matching to USB cable

#### Note:

USB\_ON is only used when the firmware need an input to detect if USB is connected and the USB function shall be enabled. In such case it is shared with the module PIO terminals. If detection is not needed (firmware already runs with USB, such as USB DFU or USB CDC), USB\_ON is not needed.

RoHS/RoHS II compliant

## SOFTWARE STACKS

ABBTM-NVC-MDCS42A is Bluetooth 2.1+EDR module, the embedded iNova Bluetooth Stack firmware supports the SPP, SDP, OPP, FAX, HID Profile, and supports up to seven devices simultaneously connected.

Furthermore, the Apple iAP (iPod Accessory Protocol) which is used to connect with iOS devices has also been implemented and included in iNova Bluetooth Stack firmware.

Please contact Abracon for support of more profiles and applications with iNova Bluetooth stack firmware.

## iNOVA Stack

#### Figure 15. iNOVA Stack

ABBTM-NVC-MDCS42A is supplied with Bluetooth 2.1+EDR compliant stack firmware. With Novacomm's iNova profile stacks, the host MCU can easily integrate HFP, A2DP, AVRCP, SPP, HID profiles and iAP over Bluetooth functions.

Please refer to the Abracon Control Interface User Guide (ACCI) for the details.

To develop accessories for iOS devices or products to connect to iOS devices, the developers must register and be approved by Apple's Made for iPod (MFi) program. Licensed developers gain access to technical documentation, hardware components, technical support and certification logos.

Please visit Apple developer portal at the link below for more information:

http://developer.apple.com/ipod/

**REFERENCE DESIGN** 

ABRACON IS ISO 9001:2008 CERTIFIED Downloaded from Arrow.com.

**RF LAYOUT GUIDELINES** 

ABBTM-NVC-MDCS42A has an on-board PCB antenna. Therefore, antenna placement is very important to ensure a good RF performance of the module. Figure 17 shows some examples of the module placement.

① : Placement not recommended

②, ③, ④: Recommended antenna placement

Figure 17. Placement of the Module on a Main Board

## **REFLOW PROFILE:**

ABBTM-NVC-MDCS42A is compatible with industrial standard reflow profile for Pb-free solders. The soldering profile depends on various parameters necessitating a set up for each application. The data here is given only for guidance on solder re-flow.

There are four zones:

- Preheat Zone This zone raises the temperature at a controlled rate, typically 1-2.5°C/s.
- Equilibrium Zone This zone brings the board to a uniform temperature and also activates the flux. The duration in this zone (typically 2-3 minutes) will need to be adjusted to optimise the out gassing of the flux.
- Reflow Zone- The peak temperature should be high enough to achieve good wetting but not so high as to cause component discoloration or damage. Excessive soldering time can lead to intermetallic growth which can result in a brittle joint.
- Cooling Zone The cooling rate should be fast, to keep the solder grains small which will give a longer lasting joint. Typical rates will be 2-5°C/s.

Key features of the profile:

- Initial Ramp = 1-2.5°C/sec to 175°C  $\pm 25$ °C equilibrium
- Equilibrium time = 60 to 180 seconds
- Ramp to Maximum temperature  $(250^{\circ}C) = 3^{\circ}C/sec$  max.
- Time above liquidus temperature (217°C): 45-90 seconds
- Device absolute maximum reflow temperature: 255°C

Figure 18. Typical Lead-Free Reflow Solder Profile for ABBTM-NVC-MDCS42A
