

SM-UART-04L

PM2.5 + PM10

Particulate Dust Sensor

SM-UART-04L Particulate Dust Sensor is designed for a wide range of air quality applications where fine particle dust needs to be measured. Applications include air quality meters and air purifiers for both residential and light industrial monitoring and control. The optical design leverages laser technology, which allows customers to achieve excellent performance with balanced reliability. SM-UART-04L is an ideal solution for industrial and consumer applications.

SM-UART-04L is a PM2.5 laser-based Particulate Dust Sensor that detects dust particle concentration in air by using an optical sensing method. A laser light emitting diode (laser LED) and a photo sensor are optically arranged in the device. The photo sensor detects the reflected laser LED light by dust particles in air. The dust sensor can detect small particles from large house dust, by the pulse pattern of the signal output.

Features

- Laser Optical Dust
 - High accuracy
 - Fast response
- PM2.5 Output
- PM10 Calculated Output
- ROHS and REACH Compliant
- UART Series Digital Output
- Compact in size
- Flexible mounting style
- Protected from EMC intrusion by metal case
- Wide detection range
- Average Time Before Re-calibration: 40,000 hrs

Applications

- Indoor Air Quality Monitoring
- Air Cleaners and Purifiers
- Air Conditioners and HVAC
- Outdoor Dust Monitoring (with additional protection)

Dimensions

SM-UART-04L Particulate Dust Sensor

Reliability

1	Drop	Drop it unintentionally from 100 cm height down to the hard wooden board three times at random direction
2	High Temp. Storage	Leave in the atmosphere 70°C for 96 hours
3	Low Temp. Storage	Leave in the atmosphere -30°C for 72 hours
4	High Temp. Operation	Operate it in the atmosphere of 50°C for 96 hours
5	Low Temp. Operation	Operate it in the atmosphere of -10°C for 72 hours
6	Temperature Cycle	Repeat 30 times in the following cycle  Key T temperature, °C t time, min a Operating mode 3.2 (see ISO 16750-1) b One cycle.
7	Operating Volt. Range	VCC = 4.8V/5.0V/5.2V Verify Indication Error within SPEC (0~1000ug/m3)
8	Slow Decrease & Increase of Supply Voltage	Decrease the supply volt. from the minimum supply voltage 4.8V to 0V, then increase it from 0V to 5.2V, applying a change rate in equal steps of not more than 200 mV/min. Test dust concentration is 250 +/- 50 ug/m3
9	Short Circuit Protection	Connect all pins to the pins next to them for a duration of 60s with power supplied and all other pins remain open. Class C satisfied
10	Reliability - Operating	TA=25°C, RH=30~70%, VCC=5V Continuously operate 720h. Verify Indication Error within SPEC (0~1000ug/m3)
11	Reliability – ON/OFF	10s ON/10s OFF, operate for 72h. Verify Indication Error within SPEC (0~1000ug/m3)
12	Salt Spray	According to GB/T 2423.17-93, spray 5% NaCl solution in salt mist box at 35°C for 24 hours, then clean with water after test

Data Consistency

Packing Specifications

Length (L)	Width (W)	Height (H)	Inner Qty	Total Qty	Weight
418.2mm	295mm	210mm	5 layer	200 pcs	5kg max

Application Notes

Grounding

The metal case is internally connected to GND. Do not strip the metal case.

Maintenance

The product is designed to be maintenance free.

Do not attempt to disassemble the device. There are no user-servicable parts in the module. Disassembly will invalidate warranty.

Electro-Magnetic (EM) Noise

Excessive electro-magnetic (EM) noise may degrade sensor performance. Shield sensor from EM noise in application.

Vibration

Excessive vibration may degrade sensor's performance. Please keep sensor far from vibration in application.

Ambient Light

Excessive ambient light may degrade sensor performance. Keep sensor far from intense direct light.

SM-UART-04L Particulate Dust Sensor

Mounting Orientation

Please take sensor mounting orientation into consideration to avoid the influence of adhered dust. The sensor is installed vertically as the best of below:

In addition, please avoid any adhesive particle (fur, oil, etc). If particles adhere to optical part, malfunction may occur.
