

Reflective, Silicon SP8T Switch, 100 MHz to 20 GHz

FEATURES

- ▶ Ultrawideband frequency range: 100 MHz to 20 GHz
- ▶ Low insertion loss
 - ▶ 1.3 dB up to 6 GHz
 - ▶ 1.6 dB up to 12 GHz
 - ▶ 2.0 dB up to 20 GHz
- ▶ High isolation
 - ▶ 46 dB up to 6 GHz
 - ▶ 45 dB up to 12 GHz
 - ▶ 40 dB up to 20 GHz
- ▶ High input linearity
 - ▶ P0.1dB: 33 dBm typical
 - ▶ IP3: 55 dBm typical
- ▶ High RF power handling
 - ▶ Insertion loss path: 33 dBm
 - ▶ Hot switching: 30 dBm
- ▶ Fast switching on and off time: 55 ns
- ▶ 0.1 dB settling time (50% V_{CTRL} to 0.1 dB final RF_{OUT}): 100 ns
- ▶ Single-supply operation capability
- ▶ All off state control
- ▶ Logic select control
- ▶ No low frequency spurs
- ▶ 36-terminal, 5.50 mm x 5.50 mm LGA package

APPLICATIONS

- ▶ Test and instrumentation
- ▶ Military radios, radars, and electronic counter measures (ECMs)
- ▶ Microwave radios and very small aperture terminals (VSATs)

FUNCTIONAL BLOCK DIAGRAM

Figure 1. Functional Block Diagram

GENERAL DESCRIPTION

The ADRF5080 is a reflective, SP8T switch manufactured in the silicon process. The ADRF5080 operates from 100 MHz to 20 GHz with an insertion loss of lower than 2.0 dB and an isolation higher than 40 dB. The device has an RF input power handling capability of 30 dBm continuous wave power for the insertion loss path.

The ADRF5080 operates with a dual-supply voltage, +3.3 V and -3.3 V. The device can also operate with a single-supply voltage (VDD) applied while the negative supply pin (VSS) is tied to ground. The single-supply operation condition requires a lower operating power while the excellent small signal performance is maintained. See Table 2 for details.

The ADRF5080 employs complementary metal-oxide semiconductor (CMOS)/low voltage transistor to transistor logic (LVTTTL)-compatible controls.

The ADRF5080 comes in a 36-terminal, 5.50 mm x 5.50 mm, RoHS compliant, land grid array (LGA) package and can operate from -40°C to +105°C.

REVISION HISTORY

7/2023—Revision 0: Initial Version

SPECIFICATIONS

Positive supply voltage (V_{DD}) = 3.3 V, negative supply voltage (V_{SS}) = -3.3 V, LS voltage (V_{LS}), EN voltage (V_{EN}), V1, V2, or V3 = 0 V or VDD, and T_{CASE} = 25°C, with a 50 Ω system, unless otherwise noted. RFx refers to RF1 to RF8, and V_{CTRL} is the digital control inputs voltage of the V1, V2, and V3 pins.

Table 1. Specifications

Parameter	Symbol	Test Conditions/Comments	Min	Typ	Max	Unit
FREQUENCY RANGE	f		100		20,000	MHz
INSERTION LOSS						
Between RFC and RFx (On)		100 MHz to 6 GHz		1.3		dB
		6 GHz to 12 GHz		1.6		dB
		12 GHz to 20 GHz		2.0		dB
ISOLATION						
Between RFC and RFx		100 MHz to 6 GHz		50		dB
		6 GHz to 12 GHz		50		dB
		12 GHz to 20 GHz		44		dB
Between RFx and RFx		100 MHz to 6 GHz		46		dB
		6 GHz to 12 GHz		45		dB
		12 GHz to 20 GHz		40		dB
RETURN LOSS						
RFC (On)		100 MHz to 6 GHz		20		dB
		6 GHz to 12 GHz		18		dB
		12 GHz to 20 GHz		18		dB
RFx (On)		100 MHz to 6 GHz		20		dB
		6 GHz to 12 GHz		18		dB
		12 GHz to 20 GHz		18		dB
SWITCHING CHARACTERISTICS						
Rise Time and Fall Time	t_{RISE} , t_{FALL}	10% to 90% of RF output (RF_{OUT})		15		ns
On Time and Off Time	t_{ON} , t_{OFF}	50% V_{CTRL} to 90% of RF_{OUT}		55		ns
RF Settling Time		50% V_{CTRL} to 0.1 dB of final RF_{OUT}		100		ns

SPECIFICATIONS

Table 1. Specifications (Continued)

Parameter	Symbol	Test Conditions/Comments	Min	Typ	Max	Unit
Digital Control Input Voltage	V_{CTRL}		0		VDD	V
RF Power Handling ²	P_{IN}	$f = 100 \text{ MHz to } 20 \text{ GHz}$, $T_{CASE} = 85^{\circ}\text{C}$ ³				
Insertion Loss Path		RF signal is applied to RFC or through connected RFx			33	dBm
Hot Switching		RF signal is applied to RFC or through connected RFx			30	dBm
Case Temperature	T_{CASE}		-40		+105	$^{\circ}\text{C}$

¹ For input linearity performance over frequency, see the [Input Power Compression and Third-Order Intercept](#) section.

² For power derating over frequency, see [Figure 2](#) and [Figure 3](#).

³ For 105 $^{\circ}\text{C}$ operation, the power handling derates from the $T_{CASE} = 85^{\circ}\text{C}$ specification by 3 dB.

SINGLE-SUPPLY OPERATION SPECIFICATIONS

Positive supply voltage (V_{DD}) = 3.3 V, negative supply voltage (V_{SS}) = 0 V, LS voltage (V_{LS}), EN voltage (V_{EN}), V1, V2, or V3 = 0 V or VDD, and $T_{CASE} = 25^{\circ}\text{C}$, with a 50 Ω system, unless otherwise noted. RFx refers to RF1 to RF8, and V_{CTRL} is the digital control inputs voltage of the V1, V2, and V3 pins.

The small signal and bias characteristics are maintained for the single-supply operation.

Table 2. Single-Supply Operation Specifications

Parameter	Symbol	Test Conditions/Comments	Min	Typ	Max	Unit
FREQUENCY RANGE			100		20,000	MHz
SWITCHING						
Rise Time and Fall Time	t_{RISE} , t_{FALL}	10% to 90% of RF_{OUT}		50		ns
On Time and Off Time	t_{ON} , t_{OFF}	50% V_{CTRL} to 90% of RF_{OUT}		150		ns
0.1 dB Settling Time		50% V_{CTRL} to 0.1 dB of final RF_{OUT}		300		ns
INPUT LINEARITY

Third-Order Intercept	IP3	Two-tone input power = 20 dBm each tone, $f = 15 \text{ GHz}$, $\Delta f = 1 \text{ MHz}$		37		dBm
RECOMMENDED OPERATING CONDITIONS						
RF Power Handling		$f = 100 \text{ MHz to } 20 \text{ GHz}$, $T_{CASE} = 85^{\circ}\text{C}$				
Insertion Loss Path		RF signal is applied to RFC or through connected RFx			15	dBm
Hot Switching		RF signal is applied to RFC or through connected RFx			9	dBm
Case Temperature	T_{CASE}		-40		+105	$^{\circ}\text{C}$

ABSOLUTE MAXIMUM RATINGS

For recommended operating conditions, see [Table 1](#) and [Table 2](#).

Table 3. Absolute Maximum Ratings

Parameter	Rating
Supply Voltage	
VDD	-0.3 V to +3.6 V
VSS	-3.6 V to +0.3 V
Digital Control Input ¹	
Voltage	-0.3 V to VDD + 0.3 V
Current	3 mA
RF Input Power ²	
Dual Supply (VDD = 3.3 V, VSS = -3.3 V, f = 100 MHz to 20 GHz, T _{CASE} = 85°C ³)	
Through Path	33.5 dBm
Hot Switching	30.5 dBm
Single Supply (VDD = 3.3 V, VSS = 0 V, f = 100 MHz to 20 GHz, T _{CASE} = 85°C ³)	
Through Path	15.5 dBm
Hot Switching	9.5 dBm
Unbiased (VDD, VSS = 0 V)	10.5 dBm
Temperature	
Junction (T _J)	135°C
Storage	-65°C to +150°C
Reflow	260°C

¹ Overvoltages at digital control inputs are clamped by internal diodes. Current must be limited to the maximum rating given.

² For power derating over frequency, see [Figure 2](#) and [Figure 3](#).

³ For 105°C operation, the power handling degrades from the T_{CASE} = 85°C specification by 3 dB.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL RESISTANCE

Thermal performance is directly linked to printed circuit board (PCB) design and operating environment. Careful attention to PCB thermal design is required. θ_{JC} is the junction to case bottom (channel to package bottom) thermal resistance.

Table 4. Thermal Resistance

Package Type	θ_{JC} ¹	Unit
CC-36-2		
Insertion Loss Path	130	°C/W

¹ θ_{JC} was determined by simulation under the following conditions: the heat transfer is due solely to thermal conduction from the channel through the round pad to the PCB, and the ground pad is held constant at the operating temperature of 85°C.

POWER DERATING CURVES

Figure 2. Power Derating vs. Frequency, Low Frequency Detail, T_{CASE} = 85°C

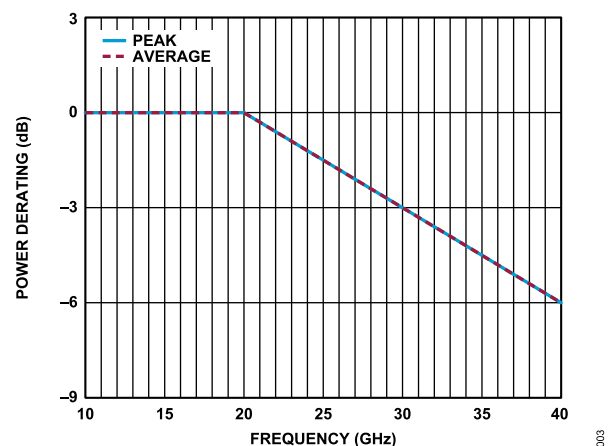

Figure 3. Power Derating vs. Frequency, High Frequency Detail, T_{CASE} = 85°C

ABSOLUTE MAXIMUM RATINGS**ELECTROSTATIC DISCHARGE (ESD) RATINGS**

The following ESD information is provided for handling of ESD sensitive devices in an ESD protected area only.

Human body model (HBM) per ANSI/ESDA/JEDEC JS-001.

Charged device model (CDM) per ANSI/ESDA/JEDEC JS-002.

ESD Ratings for ADRF5080

Table 5. ADRF5080, 36-Terminal LGA

ESD Model	Withstand Threshold (V)	Class
HBM		
RFx and RFC Pins	2000	2
Supply and Control Pins	2000	2
CDM	500	C2A

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

NOTES
1. EXPOSED PAD. THE EXPOSED PAD MUST BE CONNECTED TO THE RF AND DC GROUND OF THE PCB.

004

Figure 4. Pin Configuration (Top View)

Table 6. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	RF6	RF Throw Port 6. The RF6 pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking capacitor is required when the RF line potential is equal to 0 V DC. See Figure 5 for the interface schematic.
2, 3, 5, 6, 8, 12, 13, 15, 20, 22, 23, 25, 26, 28, 29, 31 to 33, 35, 36	GND	Ground. The GND pins must be connected to the RF and DC ground of the PCB.
4	RF7	RF Throw Port 7. The RF7 pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking capacitor is required when the RF line potential is equal to 0 V DC. See Figure 5 for the interface schematic.
7	RF8	RF Throw Port 8. The RF8 pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking capacitor is required when the RF line potential is equal to 0 V DC. See Figure 5 for the interface schematic.
9	LS	Logic Select. See Table 7 for the truth table. See Figure 7 for the interface schematic.
10	VDD	Positive Supply Voltage.
11	VSS	Negative Supply Voltage.
14	RFC	RF Common Port. The RFC pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking capacitor is required when the RF line potential is equal to 0 V DC. See Figure 5 for the interface schematic.
16	V3	Digital Input 3. See Table 7 for the truth table. See Figure 6 for the interface schematic.
17	V2	Digital Input 2. See Table 7 for the truth table. See Figure 6 for the interface schematic.
18	V1	Digital Input 1. See Table 7 for the truth table. See Figure 6 for the interface schematic.
19	EN	Enable Input. See Table 7 for the truth table. See Figure 7 for the interface schematic.
21	RF1	RF Throw Port 1. The RF1 pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking capacitor is required when the RF line potential is equal to 0 V DC. See Figure 5 for the interface schematic.
24	RF2	RF Throw Port 2. This pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking capacitor is required when the RF line potential is equal to 0 V DC. See Figure 5 for the interface schematic.
27	RF3	RF Throw Port 3. The RF3 pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking capacitor is required when the RF line potential is equal to 0 V DC. See Figure 5 for the interface schematic.
30	RF4	RF Throw Port 4. The RF4 pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking capacitor is required when the RF line potential is equal to 0 V DC. See Figure 5 for the interface schematic.
34	RF5	RF Throw Port 5. The RF5 pin is DC-coupled to 0 V and AC matched to 50 Ω. No DC blocking capacitor is required when the RF line potential is equal to 0 V DC. See Figure 5 for the interface schematic.
	EPAD	Exposed Pad. The exposed pad must be connected to the RF and DC ground of the PCB.

THEORY OF OPERATION

The ADRF5080 integrates a driver to perform logic function internally and to provide the advantage of a simplified CMOS-LVTTL-compatible control interface. The driver features five digital control input pins (LS, EN, V1, V2, and V3) that control the state of the RFx paths (see [Table 7](#)).

The LS input allows the user to define the control input logic sequence for the RF path selections. The logic level applied to the V1, V2, and V3 pins determine which RF port is in the insertion loss state while the other three paths are in the isolation state.

When the EN pin is logic low, the logic level applied to the CMOS control input pin determines which RF port is in the insertion loss state and which RF port is in the isolation state. The insertion loss path conducts the RF signal between the selected RF throw port and the RF common port. The isolation path provides high loss between the insertion loss path and the unselected RF throw port. The unselected RF port of the ADRF5080 is reflective.

When the EN pin is logic high, the switch is in an all off state regardless of the logic state of the LS, V1, V2 and V3 pins, and all of the RFx to RFC path is in an isolation state.

RF INPUT AND OUTPUT

All of the RF ports (RFC, RF1 to RF8) are DC-coupled to 0 V, and no DC blocking is required at the RF ports when the RF line potential is equal to 0 V. The RF ports are internally matched to 50 Ω. Therefore, external matching networks are not required.

The switch design is bidirectional with equal power handling capabilities. The RF input signal can be applied to the RFC port or the selected RF throw port.

POWER SUPPLY

The ADRF5080 requires a positive supply voltage applied to the VDD pin and a negative supply voltage applied to the VSS pin. Bypassing capacitors are recommended on the supply lines to minimize RF coupling.

The ideal power-up sequence is as follows:

1. Connect GND to ground.
2. Power up VDD and VSS. Powering up VSS after VDD avoids current transients on VDD during ramp up.
3. Apply a control voltage to the digital control inputs (EN, LS, V1, V2, and V3). Applying a control voltage to the digital control inputs before the VDD supply can inadvertently forward bias and damage the internal ESD protection structures. Use a series 1 kΩ resistor to limit the current flowing into the control pin in such cases. If the control pins are not driven to a valid logic state (that is, controller output is in high impedance state) after VDD is powered up, it is recommended to use a pull-up or pull-down resistor.
4. Apply an RF input signal.

The ideal power-down sequence is the reverse order of the power-up sequence.

SINGLE-SUPPLY OPERATION

The ADRF5080 can operate with a single positive supply voltage applied to the VDD pin and VSS pin connected to ground. However, some performance degradations can occur in the input compression and input third-order intercept.

Table 7. Control Voltage Truth Table

APPLICATIONS INFORMATION

The ADRF5080 has two power supply pins (VDD and VSS) and five digital control pins (LS, EN, V1, V2, and V3). [Figure 27](#) shows the external components and connections for the supply and control pins. Supply and control pins are decoupled with a 10 pF or 100 pF multilayer ceramic capacitor. The device pinout allows the placement of the decoupling capacitors close to the device. No other external components are needed for bias and operation, except DC blocking capacitors on the RFx pins when the RF lines are biased at a voltage different than 0 V. Refer to [Pin Configuration and Function Descriptions](#) section for further details.

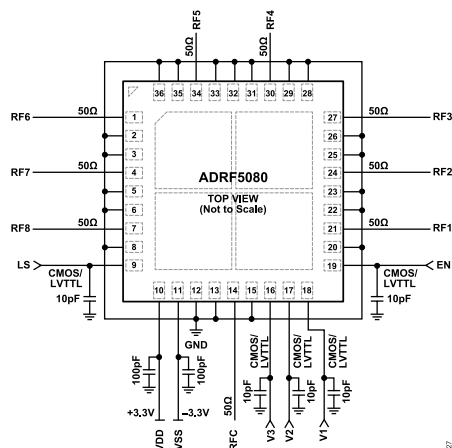

Figure 27. Recommended Schematic

RECOMMENDATIONS FOR PCB DESIGN

The RF ports are matched to 50 Ω internally and the pinout is designed to mate a coplanar waveguide (CPWG) with 50 Ω characteristic impedance on the PCB. [Figure 28](#) shows the referenced CPWG RF trace design for an RF substrate with 8 mil thick Rogers RO4003 dielectric material. The RF trace with a 14 mil width and a 7 mil clearance is recommended for 2.8 mil finished copper thickness.

Figure 28. Example PCB Stackup

[Figure 29](#) shows the routing of the RF traces, supply, and control signals from the device. The ground planes are connected with as many filled through vias as allowed for optimal RF and thermal performance. The primary thermal path for the device is the bottom side.

Figure 29. PCB Routings

[Figure 30](#) shows the recommended layout from the device RFx pins to the 50 Ω CPWG on the referenced stackup. PCB pads are drawn 1:1 to device pads. The ground pads are drawn solder mask defined, and the signal pads are drawn as pad defined. The RF trace from the PCB pad is extended with the same width by 2 mils and tapered to an RF trace with 45° angle. The paste mask is also designed to match the pad without any aperture reduction. The paste is divided into multiple openings for the paddle.

Figure 30. Recommended RFx Pin Transitions

For alternate PCB stackups with different dielectric thickness and CPWG design, contact [Analog Devices, Inc., Technical Support Request](#) for further recommendations.
