

All-in-one, fast-prototyping, user-friendly MCU and motor control evaluation board based on the Chorus SPC58EC80E5 automotive microcontroller

Features

- **SPC58EC80E5** microcontroller: 32-bit Power Architecture e200z4d dual core, 4224 kB flash + 128 kB data flash in eTQFP144 package
- Integrated programmer and debugger (1 USB virtual COM port and JTAG)
- 3 integrated CAN FD transceivers
- 1 integrated LIN transceiver
- 5 user push buttons and 5 generic LEDs
- Reset button
- 5 connectors (8 pins each) with pre-allocated GPIOs, ADCs and signals
- 6 SPI ports (two CS each)
- 9 ADCs
- 5 interrupts
- 11 GPIOs
- 8 timers
- 2 enhanced modular IO subsystems (eMIOS) that feature:
 - Generation or measurement of time events on up to 2 x 32 timed I/O channels with 16-bit counter resolution
 - Support for configurable trigger outputs for ADC conversion for synchronization with channel output waveforms
 - Shared or independent time bases
 - Motor control capability
- 3 connectors for serial communication:
 - I2C
 - LIN
 - UART
- Reverse battery-protection dedicated circuit
- 2 dedicated connectors, one on each side of the board, to plug the **AEK-LCD-DT028V1** display board
- 1 **VNH7040AY** integrated H-bridge motor driver for DC motors
- 2 **VND7E040AJ** double channel high-side drivers
- 2 **L5963** integrated DC-DC converters: one for internal power supply and one for external power supply up to 2.75 A (5 V and 3.3 V)
- 2 connectors for 12 V power supply
- Compact size: 165 mm x 105 mm
- Included in the **AutoDevKit** ecosystem

Product summary

All-in-one, fast-prototyping, user-friendly MCU and motor control evaluation board based on the Chorus SPC58EC80E5 automotive microcontroller	AEK-MCU-C4MINI1
32-bit Power Architecture MCU for Automotive General Purpose Applications - Chorus family	SPC58EC80E5
Automotive dual monolithic switching regulator with LDO and HSD	L5963
Automotive fully integrated H-bridge motor driver	VNH7040AY
Double-channel HSD with Current Sense analog feedback	VND7E040AJ
Display expansion board with resistive touch for Chorus family	AEK-LCD-DT028V1
AutoDevKit Studio for 32-bit power architecture MCUs	STSW-AUTODEVKIT
Applications	DC motor control

Description

The **AEK-MCU-C4MINI1** offers more than a standard MCU board. Leveraging on a user-friendly interface, it allows fast ECU prototyping with basic motor control drives, serial communication ports and LCD resistive display dual connection.

Product summary	
	Automotive resistive, inductive, and capacitive loads
	Domain and zone controllers
	Automotive gateways
	General purpose Automotive MCU boards

The **AEK-MCU-C4MINI1** is designed to address Automotive and Transportation applications as well as other applications requiring automotive safety and security levels. A cryptography dedicated MCU core, employed as hardware secure module (HSM), is paired with dual 180 MHz general-purpose 32-bit cores, all hosted by the on board **SPC58EC80E5** MCU, featuring a total 4 MB of flash memory.

The board layout has been conceived to speed up the user development thus offering an easy prototyping evaluation tool.

The general-purpose and serial connectors have been standardized and grouped by peripheral function types.

The MCU peripherals are extended with the **VNH7040AY** embedded H-bridge motor driver for DC motor control, featuring advanced diagnostic features (short-to-ground, short-to-battery, and open load conditions). The board has a dedicated supply capacity for an external 5 V or 3.3 V load with maximum current capability of 2.75 A.

The **AEK-MCU-C4MINI1** allows plugging an **AEK-LCD-DT028V1** touch display board for multiple application and debug purposes, such as monitoring the motor current, printing serial data, or for hardware debugging, without the need of connecting any PC terminal console. For this LCD board, two connectors are provided on the board, one on the top and one on the bottom. The two connectors shall not be connected and used at the same time.

The top connection facilitates the debugging phase (for example, when testing signal connections and data exchange), while the bottom one reduces the total occupied space by the two boards, making it the preferred choice for deployment purposes.

The MCU ADC reference voltage is provided by a stable linear voltage regulator (LDO) embedded in the L5963 IC.

The board hosts an OpenOCD debugger/programmer, several MCU peripheral connectors as well as various general-purpose buttons and LEDs.

For system reset during the development phase, a reset button was added to the board layout. In addition, a reverse battery protection circuit has been integrated for higher safety.
