INTRODUCTION

This WiFi IoT module would be an excellent choice for IoT classroom teaching and smart home projects. It supports multiple programming platforms, such as MakeCode, Mind+, and Arduino IDE, and can also be used on various popular IoT platforms like Easy IoT, IFFTTT, ThingSpeak, SIoT. Besides that, the module is designed with easy-to-use Gravity interface and employs UART and I2C communication protocols. You can use it to build IoT projects with other mainboards like micro:bit, Arduino, STM32, etc.

Board Overview

FEATURES

- Support Arduino IDE programming, MakeCode and Mind+ Graphical Programming
- I2C and UART Communication
- Support Maincontroller Arduino, micro:bit, etc.
- Support protocols like MQTT, HTTP, etc. Work well with IoT platforms EasyloT, IFTTT, ThingSpeak, etc.
- PH2.0-4P Gravity Interface

SPECIFICATION
