

450W Fan cooled

250W Convection cooled

AC-DC power supplies 

Designed to minimize size and maximize efficiency to facilitate integration into ever more compact equipment, the chassis mount ECH450 is the ideal choice. The ECH450 range has medical approvals with 2 x MOPP (input to output), 1 x MOPP (input to ground) & 1 x MOPP (output to ground) making it suitable for BF applications, they also meet IEC/UL/EN62368-1 safety approval for information technology equipment.

The full 450W is available when fan cooled with 250W available in convection cooled applications. The standard model is open frame, options are: supplied with a vented cover (model numbers with a -C suffix); encased with an end fan fitted (model numbers with a -EF suffix) or encased with a top fan fitted (model numbers with a -TF suffix).

Features

- ▶ 450W fan cooled 250W convection cooled
- ▶ 127.0 x 76.2mm (5" x 3") footprint 36.1mm profile
- ▶ Regulated single outputs 12V to 54VDC
- ▶ Input range 90 to 264VAC
- ▶ Medical 2 x MOPP (BF) & ITE approvals
- ▶ High efficiency, up to 94%
- ▶ 5VDC 1A standby
- ▶ 12VDC 0.6A fan supply
- ▶ Remote On/Off
- ▶ -20°C to +70°C operation
- ▶ 3 year warranty

Notes:

1. Typical efficiencies measured at 100% load and 230 VAC input.
2. Typical voltage, actual regulated voltage will be in range of 11.4V to 12.6V.
3. Regulation of the fan output requires a minimum load of 10W on the main output.
4. Add suffix -C to part number for vented cover version, -TF for top fan version and -EF for end fan version.

Service life

The estimated service life of the ECH450 is determined by the cooling arrangements and load conditions experienced in the end application. Due to the uncertain nature of the end application this estimated service life is based on the actual measured temperature of a key capacitor with in the product when installed by the end application,

The graph below expresses the estimated lifetime of a given component temperature and assumes continuous operation at this temperature.

Figure 6 - estimated service life vs component temperature

Thermal considerations

In order to ensure safe operation of the PSU in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. Temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of direct air flow). See Standard Open Frame Mechanical Details on page 7 for component locations.
