Part Number : SW500131 - Express Logic - ThreadX MCU Edition RTOS for dsPIC

Express Logic's ThreadX MCU Edition RTOS is a fully preemptive, deterministic, real-time operating system designed for Microchip's dsPIC processors. It is well suited for applications that run as multiple threads (or tasks), which must be managed on a priority basis with preemption for higher-priority events. ThreadX/MCU provides thread management, inter-thread message queues, semaphores, mutexes, timers, byte and block memory pools, and event-flag group control mechanisms. It is provided in library form, ready to link to function calls from the application. The minimal footprint of ThreadX/MCU is under 2KB on dsPIC Microcontrollers. This license enables unlimited deployment in production of a single product. No royalties are charged, and there is no limit on the number of units produced.

Express Logic is a trusted Third Party Tool provider
