

DATA SHEET

SKY16602-632LF: Low-Threshold PIN Diode Limiter 0.2 to 4.0 GHz

Applications

- Cellular infrastructure
- WLAN, WiMAX
- Receiver LNA protection
- Test instruments

Features

- Optimized for 0.2 to 4.0 GHz operation
- Low limiting threshold (+5 dBm typical)
- Low insertion loss
- Low distortion
- Integrated PIN limiter and Schottky diodes, and DC blocks
- DFN (2-pin, 2.3 x 2.3 mm) Pb-free package, (MSL1, 260°C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Figure 1. SKY16602-632LF Block Diagram

Description

The SKY16602-632LF is a fully integrated PIN diode low-threshold limiter module in a surface-mount package. It is designed for use as a passive receiver protector in wireless or other RF systems for frequencies up to 4 GHz. It features a low limiting threshold, low-insertion loss, and low distortion in a Dual Flat No Lead (DFN) package.

The SKY16602-632LF module is comprised of a PIN limiter diode, a Schottky diode, and 2 DC blocking caps at the RF ports in a 2-lead DFN. The small package design reduces printed circuit board area. The module can be tuned using external surface mount technology (SMT) components for optimal narrow band performance over the 0.2 to 4.0 GHz operating range.

The module can operate over the temperature range of -40 °C to +85 °C.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Figure 2. SKY16602-632LF Pinout (Top View)

Table 1. SKY16602-632LF Signal Descriptions

Pin	Name	Description
1	RF_IN	RF input, AC coupled
2	RF_OUT	RF output, AC coupled
3	GND	Must be connected to chassis ground
4	PAD	Exposed pad (must be isolated from ground)

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY16602-632LF are provided in Table 2. Electrical specifications for the un-tuned limiter module are provided in Table 3, and typical performance characteristics start at Figure 4. Electrical specifications for the 2.45 GHz tuned limiter module are provided in Table 4.

Figure 8 shows the power derating curve for the limiter. The temperature is referenced to the bottom of the DFN package.

Table 2. SKY16602-632LF Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Unit
RF input power (CW) at T _{CASE} = 120°C, without external tune	P _{IN}		1	W
RF input power (1 μs pulse, 10% duty cycle) at T _{CASE} = 120°C, without external tune	P _{IN}		10	W
CW power dissipation at T _{CASE} = 120°C	P _{DIS}		0.4	W
Storage temperature	T _{STG}	-65	+150	°C
Operating temperature	T _{OP}	-40	+85	°C
Electrostatic discharge:	ESD		1000	V
Charged-Device Model (CDM), Class 4				
Human Body Model (HBM), Class 1B				
Machine Model (MM), Class A				

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: Industry-standard ESD handling precautions must be adhered to at all times to avoid damage to this device.

Table 3. SKY16602-632LF Electrical Specifications (Untuned Circuit, Reference Figure 1)
(T_{OP} = 25°C, Z₀ = 50 Ω, as Measured in Skyworks Evaluation Board Optimized for Operation at 0.2 to 4.0 GHz, Unless Otherwise Noted)

Parameter	Symbol	Condition	Frequency	Min	Typ	Max	Units
Reverse voltage	V _R					20	V
Forward current	I _F					50	mA
Insertion loss	I _L	P _{IN} = 0 dBm	0.90 GHz		0.3	0.5	dB
Return loss	R _L	P _{IN} = 0 dBm	0.90 GHz		14		dB
Threshold level	T _L	P _{1dB}	0.90 GHz	5.3	6.0	6.7	dBm
Saturated CW input power ¹	P _{IN_CW}		0.90 GHz		30		dBm
Flat leakage power ²	F _L	P _{IN} = +10 dBm	0.90 GHz		6		dBm
Recovery time ³	t _R		0.90 GHz		5		ns
Thermal resistance	θ _{JC}	Junction-to-case			55		°C/W

¹ Saturated CW input power is defined as the point where the diode series resistance does not change with the rectified current. As the input power increases past this point, output power will increase until the diode reaches its max power limit.

² Flat leakage power is defined as the power level after the limiter has fully turned on and the output pulse reaches a constant level.

³ Recovery time represents the transition time from the high-loss to low-loss state following the removal of high-power input. RF pulse modulation: 1 μs pulse width and 0.1% duty factor.

Theory of Operation

A limiter prevents overload by allowing RF signals that are below a certain threshold to pass through, but larger signals exceeding the threshold are increasingly attenuated. The SKY16602-632LF has a lower threshold level over a traditional self-bias limiter circuit with an inductor for a ground return. It accomplishes this by adding a basic PIN limiter diode (pin 1) in parallel to a Schottky diode (pin 2). The low turn on voltage of the Schottky diode reduces the threshold level while the PIN limiter diode protects the Schottky diode at higher power levels. Therefore, for maximum RF power handling, the RF input signal is required to be connected to Pin 1. The two internal DC input/output capacitors provide DC blocking needed for most applications.

Tuned Circuit

The module may be RF tuned for optional RF match and insertion loss centered at a target frequency within its normal band of operation. This is done with the use of external surface mount components. The schematic diagram in Figure 3 shows the SKY16602-632LF limiter with a shunt connected capacitor and inductor tuned for 2.45 GHz. The Bill of Materials for the 2.45 GHz tuned circuit is shown in Table 4.

Electrical specifications for the 2.45 GHz tuned limiter module are provided in Table 5.

For additional target frequencies, refer to Table 6 for inductor and capacitor values.

Evaluation Board Description

The SKY16602-632LF Evaluation Boards are used to test the performance of the limiter. Assembly drawings for the Evaluation Boards are shown in Figures 9 and 10. The Evaluation Board layer detail is provided in Figure 11.

Package Dimensions

The PCB layout footprint for the SKY16602-632LF is shown in Figure 12. Typical part markings are noted in Figure 13. Package dimensions are shown in Figure 14, and tape and reel dimensions are provided in Figure 15.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY16602-632LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, Solder Reflow Information, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
