## Motion SPM® 45 Series

### Features

- UL Certified No. E209204 (UL1557)
- 600 V - 10 A 3-Phase IGBT Inverter with Integral Gate Drivers and Protection
- Low Thermal Resistance Using Ceramic Substrate
- Low-Loss, Short-Circuit Rated IGBTs
- Built-In Bootstrap Diodes and Dedicated Vs Pins Simplify PCB Layout
- Built-In NTC Thermistor for Temperature Monitoring
- Separate Open-Emitter Pins from Low-Side IGBTs for Three-Phase Current Sensing
- Single-Grounded Power Supply
- Optimized for 5 kHz Switching Frequency
- Isolation Rating: 2000 V<sub>rms</sub> / min.

### Applications

- Motion Control - Home Appliance / Industrial Motor

### Related Resources

### General Description

FNA41060 / FNA41060B2 is a Motion SPM® 45 module providing a fully-featured, high-performance inverter output stage for AC Induction, BLDC, and PMSM motors. These modules integrate optimized gate drive of the built-in IGBTs to minimize EMI and losses, while also providing multiple on-module protection features including under-voltage lockouts, over-current shutdown, thermal monitoring, and fault reporting. The built-in, high-speed HVIC requires only a single supply voltage and translates the incoming logic-level gate inputs to the high-voltage, high-current drive signals required to properly drive the module's robust short-circuit-rated IGBTs. Separate negative IGBT terminals are available for each phase to support the widest variety of control algorithms.

Figure 1. Package Overview

### Package Marking and Ordering Information

| Device     | Device Marking | Package   | Packing Type | Quantity |
|------------|----------------|-----------|--------------|----------|
| FNA41060   | FNA41060       | SPMAA-A26 | Rail         | 12       |
| FNA41060B2 | FNA41060B2     | SPMAA-C26 | Rail         | 12       |

## Integrated Power Functions

- 600 V - 10 A IGBT inverter for three-phase DC / AC power conversion (please refer to Figure 3)

## Integrated Drive, Protection, and System Control Functions

- For inverter high-side IGBTs: gate drive circuit, high-voltage isolated high-speed level shifting control circuit Under-Voltage Lock-Out (UVLO) protection
- For inverter low-side IGBTs: gate drive circuit, Short-Circuit Protection (SCP) control supply circuit Under-Voltage Lock-Out (UVLO) protection
- Fault signaling: corresponding to UVLO (low-side supply) and SC faults
- Input interface: active-HIGH interface, works with 3.3 / 5 V logic, Schmitt trigger input

## Pin Configuration

Figure 2. Top View

## Pin Descriptions

| Pin Number | Pin Name    | Pin Description   |
|------------|-------------|---|
| 1          | $V_{TH}$    | Thermistor Bias Voltage   |
| 2          | $R_{TH}$    | Series Resistor for the Use of Thermistor (Temperature Detection)     |
| 3          | P           | Positive DC-Link Input  |
| 4          | U           | Output for U-Phase  |
| 5          | V           | Output for V-Phase  |
| 6          | W           | Output for W-Phase  |
| 7          | $N_U$       | Negative DC-Link Input for U-Phase                                    |
| 8          | $N_V$       | Negative DC-Link Input for V-Phase                                    |
| 9          | $N_W$       | Negative DC-Link Input for W-Phase                                    |
| 10         | $C_{SC}$    | Capacitor (Low-Pass Filter) for Short-circuit Current Detection Input |
| 11         | $V_{FO}$    | Fault Output  |
| 12         | $IN_{(WL)}$ | Signal Input for Low-Side W-Phase                                     |
| 13         | $IN_{(VL)}$ | Signal Input for Low-Side V-Phase                                     |
| 14         | $IN_{(UL)}$ | Signal Input for Low-Side U-Phase                                     |
| 15         | COM         | Common Supply Ground  |
| 16         | $V_{CC(L)}$ | Low-Side Common Bias Voltage for IC and IGBTs Driving                 |
| 17         | $V_{CC(H)}$ | High-Side Common Bias Voltage for IC and IGBTs Driving                |
| 18         | $IN_{(WH)}$ | Signal Input for High-Side W-Phase                                    |
| 19         | $IN_{(VH)}$ | Signal Input for High-Side V-Phase                                    |
| 20         | $IN_{(UH)}$ | Signal Input for High-Side U-Phase                                    |
| 21         | $V_{S(W)}$  | High-Side Bias Voltage Ground for W-Phase IGBT Driving                |
| 22         | $V_{B(W)}$  | High-Side Bias Voltage for W-Phase IGBT Driving                       |
| 23         | $V_{S(V)}$  | High-Side Bias Voltage Ground for V-Phase IGBT Driving                |
| 24         | $V_{B(V)}$  | High-Side Bias Voltage for V-Phase IGBT Driving                       |
| 25         | $V_{S(U)}$  | High-Side Bias Voltage Ground for U-Phase IGBT Driving                |
| 26         | $V_{B(U)}$  | High-Side Bias Voltage for U-Phase IGBT Driving                       |

## Internal Equivalent Circuit and Input/Output Pins

**Figure 3. Internal Block Diagram**

**1st Notes:**

1. Inverter high-side is composed of three IGBTs, freewheeling diodes, and one control IC for each IGBT.
2. Inverter low-side is composed of three IGBTs, freewheeling diodes, and one control IC for each IGBT. It has gate drive and protection functions.
3. Inverter power side is composed of four inverter DC-link input terminals and three inverter output terminals.

**Absolute Maximum Ratings** ( $T_J = 25^\circ\text{C}$ , unless otherwise specified.)**Inverter Part**

| Symbol                 | Parameter                          | Conditions  | Rating    | Unit             |
|------------------------|------------------------------------|---|-----------|------------------|
| $V_{PN}$               | Supply Voltage                     | Applied between P - $N_U$ , $N_V$ , $N_W$                                     | 450       | V                |
| $V_{PN(\text{Surge})}$ | Supply Voltage (Surge)             | Applied between P - $N_U$ , $N_V$ , $N_W$                                     | 500       | V                |
| $V_{CES}$              | Collector - Emitter Voltage        |   | 600       | V                |
| $\pm I_C$              | Each IGBT Collector Current        | $T_C = 25^\circ\text{C}$ , $T_J < 150^\circ\text{C}$                          | 10        | A                |
| $\pm I_{CP}$           | Each IGBT Collector Current (Peak) | $T_C = 25^\circ\text{C}$ , $T_J < 150^\circ\text{C}$ , Under 1 ms Pulse Width | 20        | A                |
| $P_C$                  | Collector Dissipation              | $T_C = 25^\circ\text{C}$ per Chip   | 34        | W                |
| $T_J$                  | Operating Junction Temperature     | (2nd Note 1)  | -40 ~ 150 | $^\circ\text{C}$ |

**2nd Notes:**

1. The maximum junction temperature rating of the power chips integrated within the Motion SPM® 45 product is  $150^\circ\text{C}$ .

**Control Part**

| Symbol   | Parameter                        | Conditions  | Rating                | Unit |
|----------|----------------------------------|---|-----------------------|------|
| $V_{CC}$ | Control Supply Voltage           | Applied between $V_{CC(H)}$ , $V_{CC(L)}$ - COM   | 20                    | V    |
| $V_{BS}$ | High - Side Control Bias Voltage | Applied between $V_{B(U)}$ - $V_{S(U)}$ , $V_{B(V)}$ - $V_{S(V)}$ , $V_{B(W)}$ - $V_{S(W)}$             | 20                    | V    |
| $V_{IN}$ | Input Signal Voltage             | Applied between $IN_{(UH)}$ , $IN_{(VH)}$ , $IN_{(WH)}$ , $IN_{(UL)}$ , $IN_{(VL)}$ , $IN_{(WL)}$ - COM | -0.3 ~ $V_{CC} + 0.3$ | V    |
| $V_{FO}$ | Fault Output Supply Voltage      | Applied between $V_{FO}$ - COM  | -0.3 ~ $V_{CC} + 0.3$ | V    |
| $I_{FO}$ | Fault Output Current             | Sink Current at $V_{FO}$ pin  | 1                     | mA   |
| $V_{SC}$ | Current-Sensing Input Voltage    | Applied between $C_{SC}$ - COM  | -0.3 ~ $V_{CC} + 0.3$ | V    |

**Bootstrap Diode Part**

| Symbol    | Parameter                          | Conditions  | Rating    | Unit             |

| R <sub>TH</sub>      | Resistance of Thermister                 | @T <sub>TH</sub> = 25°C, (2nd Note 5)   | -   | 47   | -    | kΩ   |    |
|                      |  | @T <sub>TH</sub> = 100°C  | -   | 2.9  | -    | kΩ   |    |

## 2nd Notes:

- Short-circuit protection is functioning only at the low-sides.
- $T_{TH}$  is the temperature of thermister itself. To know case temperature ( $T_C$ ), please make the experiment considering your application.

Figure. 6. R-T Curve of The Built-In Thermistor

Bootstrap Diode Part

| Symbol   | Parameter             | Conditions                                      | Min. | Typ. | Max. | Unit |
|----------|-----------------------|---|------|------|------|------|

| $P_{WIN(OFF)}$                 |  |   | 0.5  | -    | -    |             |

### 2nd Notes:

7. This product might not make response if input pulse width is less than the recommended value.

**Figure 8. Allowable Maximum Output Current**

### 2nd Notes:

8. This allowable output current value is the reference data for the safe operation of this product. This may be different from the actual application and operating condition.

## Mechanical Characteristics and Ratings

| Parameter       | Conditions         |                         | Min. | Typ.  | Max.  | Unit    |
|-----------------|--------------------|-------------------------|------|-------|-------|---------|
| Device Flatness | See Figure 9       |                         | 0    | -     | + 120 | μm      |
| Mounting Torque | Mounting Screw: M3 | Recommended 0.7 N • m   | 0.6  | 0.7   | 0.8   | N • m   |
|                 | See Figure 10      | Recommended 7.1 kg • cm | 6.2  | 7.1   | 8.1   | kg • cm |
| Weight          |                    |                         | -    | 11.00 | -     | g       |

Figure 9. Flatness Measurement Position

**Pre - Screwing : 1→2**

**Final Screwing : 2→1**

Figure 10. Mounting Screws Torque Order

### 2nd Notes:

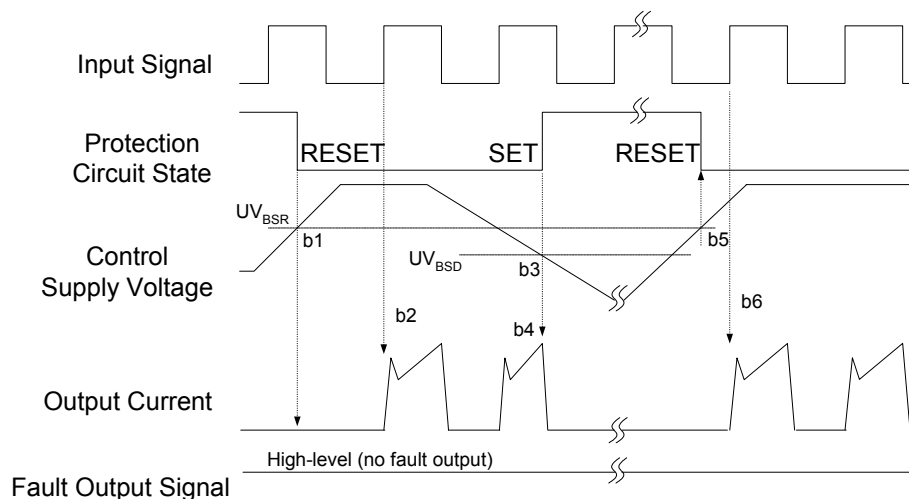

9. Do not make over torque when mounting screws. Much mounting torque may cause ceramic cracks, as well as bolts and Al heat-sink destruction.
10. Avoid one side tightening stress. Figure 10 shows the recommended torque order for mounting screws. Uneven mounting can cause the ceramic substrate of the SPM® 45 package to be damaged. The pre-screwing torque is set to 20 ~ 30% of maximum torque rating.

## Time Charts of Protective Function

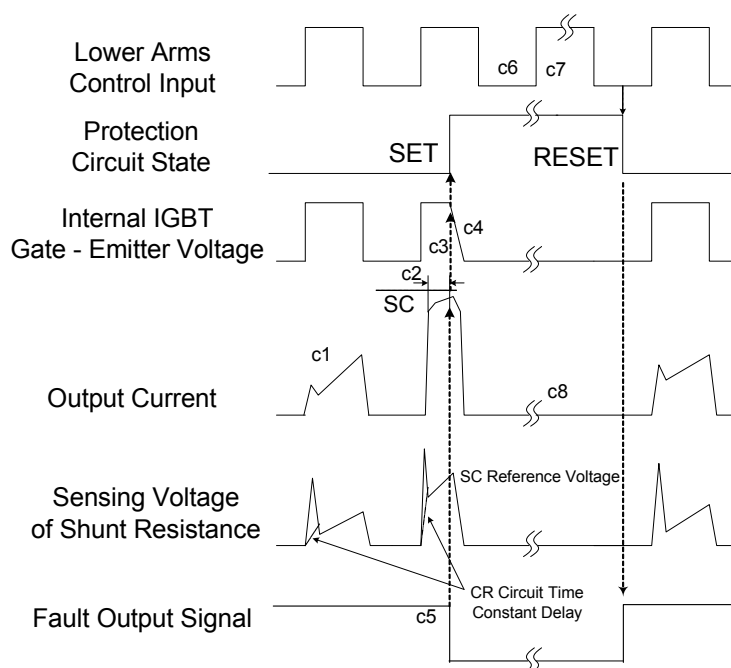

- a1 : Control supply voltage rises: after the voltage rises  $UV_{CCR}$ , the circuits start to operate when next input is applied.
- a2 : Normal operation: IGBT ON and carrying current.
- a3 : Under-voltage detection ( $UV_{CCD}$ ).
- a4 : IGBT OFF in spite of control input condition.
- a5 : Fault output operation starts.
- a6 : Under-voltage reset ( $UV_{CCR}$ ).
- a7 : Normal operation: IGBT ON and carrying current.

**Figure 11. Under-Voltage Protection (Low-Side)**

- b1 : Control supply voltage rises: after the voltage reaches  $UV_{BSR}$ , the circuits start to operate when next input is applied.
- b2 : Normal operation: IGBT ON and carrying current.
- b3 : Under-voltage detection ( $UV_{BSD}$ ).
- b4 : IGBT OFF in spite of control input condition, but there is no fault output signal.
- b5 : Under-voltage reset ( $UV_{BSR}$ ).
- b6 : Normal operation: IGBT ON and carrying current.

**Figure 12. Under-Voltage Protection (High-Side)**

(with the external shunt resistance and CR connection)

c1 : Normal operation: IGBT ON and carrying current.

c2 : Short-circuit current detection (SC trigger).

c3 : Hard IGBT gate interrupt.

c4 : IGBT turns OFF.

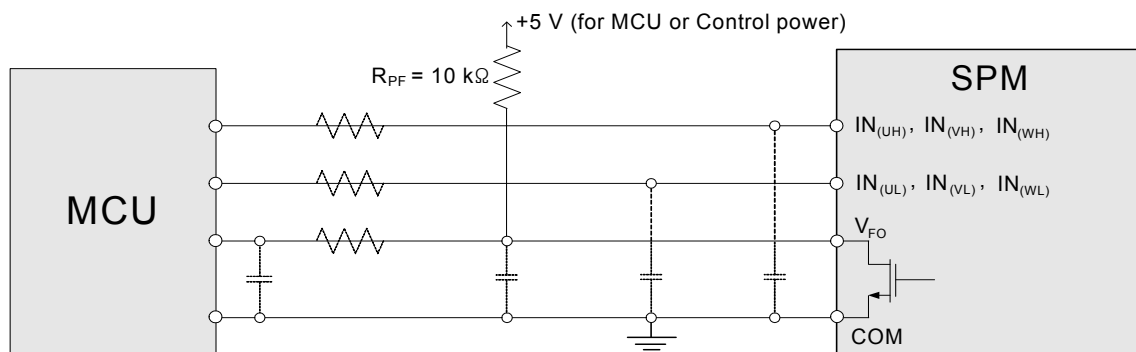

c5 : Input "LOW": IGBT OFF state.

c6 : Input "HIGH": IGBT ON state, but during the active period of fault output, the IGBT doesn't turn ON.

c7 : IGBT OFF state.

**Figure 13. Short-Circuit Protection (Low-Side Operation Only)**

## Input/Output Interface Circuit

**Figure 14. Recommended MCU I/O Interface Circuit**

### 2nd Notes:

11. RC coupling at each input (parts shown dotted) might change depending on the PWM control scheme in the application and the wiring impedance of the application's printed circuit board. The input signal section of the Motion SPM® 45 product integrates a 5 kΩ (typ.) pull-down resistor. Therefore, when using an external filtering resistor, pay attention to the signal voltage drop at input terminal.

### Figure 15. Typical Application Circuit

### 3rd Notes:

- 1) To avoid malfunction, the wiring of each input should be as short as possible (less than 2 - 3 cm).
- 2) By virtue of integrating an application-specific type of HVIC inside the Motion SPM® 45 product, direct coupling to MCU terminals without any optocoupler or transformer isolation is possible.
- 3)  $V_{FO}$  output is open-drain type. This signal line should be pulled up to the positive side of the MCU or control power supply with a resistor that makes  $I_{FO}$  up to 1 mA (please refer to Figure 14).
- 4)  $C_{SP15}$  of around seven times larger than bootstrap capacitor  $C_{BS}$  is recommended.
- 5) Input signal is active-HIGH type. There is a 5 k $\Omega$  resistor inside the IC to pull down each input signal line to GND. RC coupling circuits is recommended for the prevention of input signal oscillation.  $R_{SP5}$  time constant should be selected in the range 50 ~ 150 ns (recommended  $R_S = 100 \Omega$ ,  $C_{PS} = 1$  nF).
- 6) To prevent errors of the protection function, the wiring around  $R_F$  and  $C_{SC}$  should be as short as possible.
- 7) In the short-circuit protection circuit, please select the  $R_F C_{SC}$  time constant in the range 1.5 ~ 2  $\mu$ s.
- 8) The connection between control GND line and power GND line which includes the  $N_U$ ,  $N_V$ ,  $N_W$  must be connected to only one point. Please do not connect the control GND to the power GND by the broad pattern. Also, the wiring distance between control GND and power GND should be as short as possible.
- 9) Each capacitor should be mounted as close to the pins of the Motion SPM 45 product as possible.
- 10) To prevent surge destruction, the wiring between the smoothing capacitor and the P & GND pins should be as short as possible. The use of a high-frequency non-inductive capacitor of around 0.1 ~ 0.22  $\mu$ F between the P and GND pins is recommended.
- 11) Relays are used in almost every systems of electrical equipment in home appliances. In these cases, there should be sufficient distance between the MCU and the relays.
- 12) The zener diode or transient voltage suppressor should be adopted for the protection of ICs from the surge destruction between each pair of control supply terminals (recommended zener diode is 22 V / 1 W, which has the lower zener impedance characteristic than about 15  $\Omega$ ).
- 13) Please choose the electrolytic capacitor with good temperature characteristic in  $C_{BS}$ . Also, choose 0.1 ~ 0.2  $\mu$ F R-category ceramic capacitors with good temperature and frequency characteristics in  $C_{BSC}$ .
- 14) For the detailed information, please refer to the AN-9070, AN-9071, AN-9072, RD-344, and RD-345.
