## SOM-144 Solutions Satisfy Customers' Needs

Advantech is coming out with a wide range of System On Module™ products that cover our customers' needs. Our first SOM solution will be the SOM-144 series. SOM-144 products have compressed many features usually found on larger control boards, into the space of a 2.5" HDD (68 mm x 100 mm). The SOM-144 series offer a variety of platforms and processor choices. The SOM-2353 has the well-proven Geode™ GX1-300 MHz processor that gives fanless, low power 586-level performance. The SOM-2366 uses the Transmeta™ TM5800 800 MHz processor, also ideal for power conscious applications that need high performance operation. The SOM-2367 is the similar to SOM-2366, but it also provides the DDR SO-DIMM socket for memory expansion. All these System On Module™ products can be immediately used with their own development board.

## Geode™/Celeron®/Pentium® M and Pentium® III/VIA/SiS

Advantech's SOM-ETX form factor System on Module™ series provides a scalable solution that meets customers' advanced CPU and application development needs. Still maintaining the SOM concept of an application-specific customer solution board utilizing a plug-in CPU module, the SOM-ETX line has great I/O capacity and meets both ISA and PCI needs. With a wide range of processor choices, SOM-ETX gives application engineers powerful CPU platform choices, streamlining the product development process and reducing time to market.

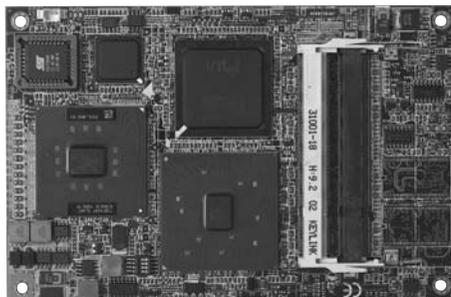

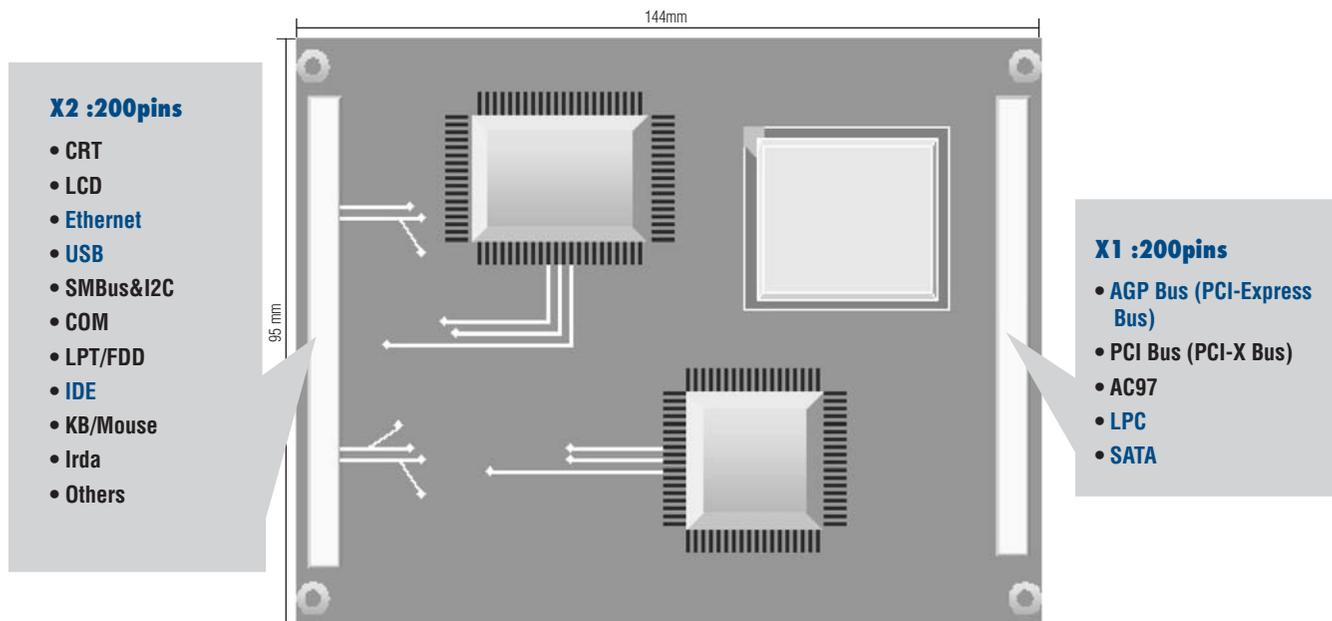

## SOM-ETX Combines Muscle and Flexibility

Advantech's ETX CPU modules give customers tremendous power and flexibility. The SOM-4470/4473/4475/4481 brings a powerful Pentium® M, Pentium® III/Celeron™ fanless processor to the Advantech SOM line, which is able to handle the most intensive data and graphics applications. The SOM-4450 incorporates a low power fanless GX1-300 processor that is becoming the processor of choice for embedded system integrators. The SOM-4451 with SiS SoC technology provides a much simpler on CPU board design. The small size (95 mm x 114 mm) and use of four high capacity connectors based on the SOM-ETX form factor, allow the SOM-ETX modules to be easily and securely mounted on a customized application (customer solution) board. This design and multiple processor choices give customers good performance options, eliminates CPU integration worries and allows fast application support for the most dynamic embedded needs.

# SOM-ETX // Series Modules

SOM-ETX // form factor System on Module Series provide a scalable high performance and easy to integrate solution that can meet customer's application needs. Still maintaining the SOM concept of an application-specific customer solution board utilizing a plug-in CPU module, the SOM-ETX // line provides advanced I/O capacity and also flexible interfaces such like AGP & PCI for easing the specific design needs of solution boards.

## SOM-ETX // SPEC

## SOM-ETX // Gives Performance and Integration

Advantech's SOM-ETX // CPU modules provide customers extreme performance and flexible integration. The SOM-5580 has a powerful Pentium M processor which gives strong core computing power to meet the most intensive data and graphics applications. The AGP interface offers more overall graphics capability. With a 3.5" HDD (95 mm x 144 mm) size and two high capacity B2B connectors allows SOM-ETX // CPU modules to be easily and securely mounted on a customized application board. This design and full I/O interface can help customers eliminate most integration worries and give fast application support for the most dynamic embedded needs.
