- **Cable crimping**
  - 1 - Insert wire onto contact body and insert the unit into the M22520/2-01 crimping tool (Selector position 2) with the dedicated locator (to be ordered separately)
  - 2 - Crimp contact to wire and inspect crimp.

- **Contact insertion**:
  Insert contact with wire into cavity of the rear insulator until a positive stop is felt. Inspect insertion. To be sure contact is locked securely, pull back lightly on wire. Repeat for balance of contacts working row by row across the insulator.

- **Interfacial seal insertion** (optional for receptacle connector only):
  Good position for interfacial seal

Process Contact and Cable Extraction:

1. How to extract contacts in the first row of connector:

   - 1 - Place wire into extraction tool tip MDMA-115373

   - 2 - Insert tool tip into contact cavity until tip bottoms against contact shoulder, releasing tine. Hold wire against tool with
     finger and remove tool and contact. Repeat for balance of contacts.

2. How to extract contacts in the second row of connector:

   Same process that first row except extraction tool is rotate 180°

3. Be careful to put extraction tool in the good position!! (Example for the first row):
