

M6049/M6050 Series

14 Pin Dip, 3.3 & 5.0 Volt, HCMOS, Clipped Sinewave Precision TCXO/TCVCXO

Product Features

- Tight stability (0.5 ppm)
- 3.3 V and 5.0 V versions
- Wide frequency range 8-52 MHz
- · Low phase noise

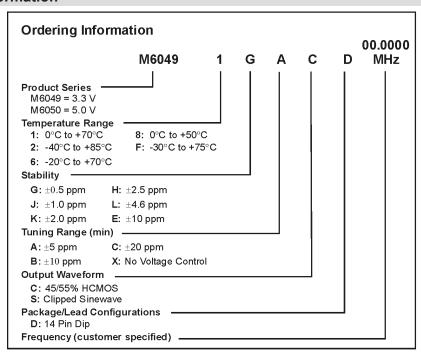

Product Description

MtronPTI's M6049/M6050 series of TCXO and TCVCXO's provide design engineers with a high stability in a reliable standard 14-DIP through-hole device. Tight stability of ± 0.5 ppm is achievable utilizing MtronPTI's unique crystal compensation technology. Excellent phase noise (-152 dBc/Hz at 10kHz) is also exhibited by the M6049/M6050 series. HCMOS and clipped sinewave output types are available in frequencies from 8 MHz to 52 MHz.

Product Applications

The M6049/M6050 series is ideally suited for a wide range of applications such as SERDES, SONET, WiMAX, GSM, GPS, 3G & 4G, CDMA, Gig-E, and other wireless communications systems. The low power (< 10 mA) make the M6049/M6050 a good choice for use in battery back-up operated systems and other "green" related, power sensitive applications. The low phase noise allows the M6049/M6050 to be used as a reference oscillator for PLL circuits in RF synthesizers and digital transmission systems.

Handling Information

Although protection circuitry has been designed into the M6049/M6050 oscillator, proper precautions should be taken to avoid exposure to electrostatic discharge (ESD) during handling and mounting. MtronPTI utilizes a human-body model (HBM) and a charged-device model (CDM) for ESD-susceptibility testing and protection design evaluation. ESD voltage thresholds are dependent on the circuit parameters used to define the mode. Although no industry-wide standard has been adopted for the CDM, a standard HBM (resistance = 1500 Ω , capacitance = 100 pF) is widely used and therefore can be used for comparison purposes. The HBM ESD threshold presented here was obtained using these circuit parameters.

| Model | ESD Threshold, Minimum | Unit |
|----------------|------------------------|------|
| Human Body | 1500* | V |
| Charged Device | 1500* | V |

M6049/M6050 Series 14 Pin Dip, 3.3 & 5.0 Volt, HCMOS, Clipped Sinewave Precision TCXO/TCVCXO

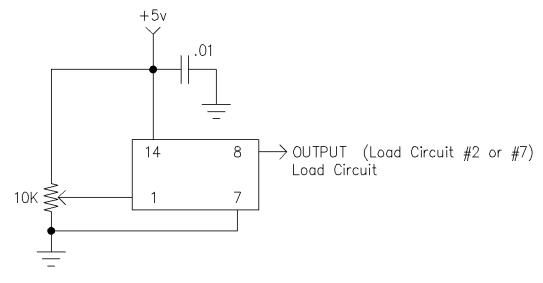

Maximum Wave Soldering Conditions:

Typical solder conditions for through hole crystals and oscillators: Per MIL-STD-202, Method 210 "Resistance to Soldering Heat", Condition C

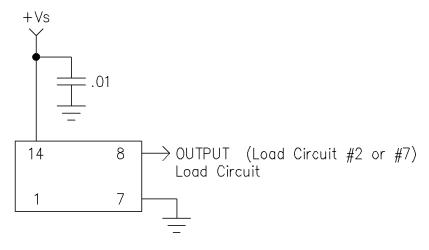

Wave solder with a solder bath temperature of $260^{\circ}\text{C} \pm 5^{\circ}\text{C}$ and an exposure time of 10 ± 1 second. Preheat $1-4^{\circ}\text{C/s}$ to within 100°C of solder temperature ($25 \pm 6 \text{ mm/s}$).

Note: Exceeding these limits may damage the device.
