

Emergency Stop Pushbutton Switches

A22NE-PD/A22NE-P/A22E Series

Machines Are Designed to Stop Without Fail.

An emergency stop pushbutton switch stops machine equipment in an emergency to protect the safety of workers.

However, if the switch does not function properly due to human error, malfunction, defective wiring or other reasons, it will lead to a major accident.

That is why Omron has focused on stopping machines without fail and produced a lineup of emergency stop switches with enhanced functionality.

>> Three Functions to Enhance Reliability

Contacts

Stops machines when a Switch is improperly mounted.

- ·Cuts off the current when the lock lever is off.
- Instantly detects work errors and lever damage.

Refer to page 4 for details.

Push-In Plus Terminal Block

Reduces loose and detached wiring.

- ·Wires are resistant to vibration and do not come off easily.
- ·Reduces work for wiring and maintenance.

Refer to page 5 for details.

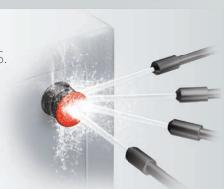

Optional IP69K

Stable operation in harsh environments.

- ·Usable up to 80°C and pressures of 80 to 100 BAR.
- ·Spray-resistant on the front and sides.

Refer to page **5** for details.

A Lineup That Allows You to Choose According to Your Needs

Fully-loaded with Three Functions

Easy and Reliable Push-In Plus Terminal Block

Basic Screw Terminal Block

A22E Series

Page 37

4 | Emergency Stop Pushbutton Switches A22NE-PD/A22NE-P/A22E Series

Accident Prevention/Stable Operation

Suppress Malfunctions Throughly with Functions for Various Applications.

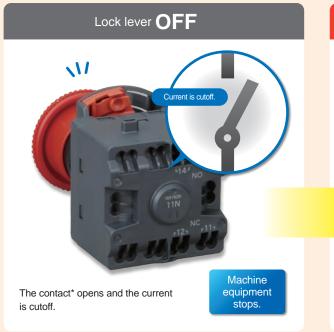

Lock-lever-linked Contacts

A22NE-PD Series

Detects Improper Installations for Zero Malfunction Problems During Emergencies

If the sliding operation of the lock lever is insufficient, the operation unit may not function properly when needed, even if pushed. With the lock-lever-linked contact function, if the sliding operation of the lock lever is insufficient, the original NC contact will turn to a NO state when the operation unit is not pushed, making it possible to detect errors from the state of the contact.

The contact* closes and the current flows.

equipment operates.

* The example shows an NC contact. However, all contacts are interlocked with the lock lever, and the statuses of NO contacts are also switched.

For machine equipment that can cause major accidents

Ensures additional safety for machine equipment that cannot afford a slight delay.

Push-In Plus Terminal Block

A22NE-PD/A22NE-P Series

Prevents Loose and Detached Wiring Caused by Vibration During Operation

In addition to preventing unexpected stoppages caused by disconnection, it is also possible to reduce maintenance efforts.

Also help reduce the wiring work

Just insert wires like you would into an earphone jack. No tools are required.

They help reduce the time and work involved in wiring.

Optional IP69K

A22NE-PD/A22NE-P Series

High-level Sealing that Is Resistant to Harsh Environments

Conventional OMRON emergency stop pushbutton switches were made to IP65 standards, but the unique technology used for our rubber-designed covers achieves IP69K specifications that can withstand high-temperature and high-pressure sprays from any direction.

High temperature: 80°C High pressure: 80 to 100 BAR

For sites that demand high-level sanitation control

Withstands high-temperature and high-pressure sprays without the need for an additional waterproof cover, allowing for worry-free installation in sites where cleaning with high-pressure washing machines is performed.

Emergency Stop Pushbutton Switches (22-dia. or 25-dia.) A22NE-PD/A22NE-P/A22E

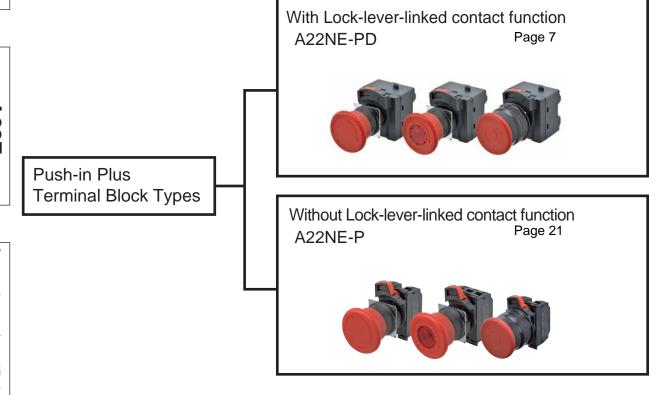

Install in 22-dia. or 25-dia.

Panel Cutout (When Using a Ring)

- Direct opening mechanism to open the circuit when the contact welds.
- With a latching mechanism to prevent operating errors.
- · Lock lever for easily mounting and removing the Unit.
- Use 25-dia. ring to install in 25-dia. panel cutouts. *
- In a model equipped with Lock-lever-linked contact function, the improper installation of the Switch Unit can be detected. (A22NE-PD)

* Switches with an IP69K degree of protection do not support the 25-dia.

Be sure to read the "Safety Precautions" on pages 18,

Screw Terminal Block Types

Emergency Stop Pushbutton Switches (22-dia. or 25-dia.) Push-in Plus Terminal Block Models With Lock-lever-linked Contact Function

Install in 22-dia. or 25-dia. Panel Cutout (When Using a Ring)

- The small size of the control panel is realized by conserving space and changing the direction of the wiring.
- Since there is no looseness in the wiring, there is a reduction in the maintenance efforts.
- A maximum of up to four contact points can be combined together in the contact-point configuration.
- Oil-resistant to IP65 (non-lighted models) / IP65 (lighted models) / IP69K high-temperature, high-pressure cleaning (pull-reset models).
- Whether or not the Operation Unit and the Switch Unit have been properly mounted can be detected from the open/closed state of the contact (Lock-lever-linked contact function). * * All contacts are interlocked with the lock lever.

(The statuses of both NC contacts and NO contacts are switched.)

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Be sure to read the "Safety Precautions" on pages 18 and 56.

Model Number Structure

Model Number Legend (Completely Assembled)....... Shipped as a set which includes the Operation Unit, LED

Lamp (lighted models only), and Switch Block.

1. Operation Unit size (diameter)

Code	Description		
S	30 dia.		
М	40 dia.		
L	60 dia.		

2. Reset function

Code	Description		
None	Turn-reset		
Р	Pull-reset *		

* The pull-reset type is only available on the 40 dia. Operation Unit, non-lighted type. Not available on lighted types.

3. Terminal specification

Code	Description		
Р	Push-in plus terminal block		

4. Lock lever function

Code	Description		
D	Lock-lever-linked contact function		

5. Contacts

Code	Number of	Contacts	
Code	Contacts	NO	NC
01	one contact	0	1
02	two contacts	0	2
11		1	1
03	three contacts	0	3
21		2	1
12		1	2
22	four contacts	2	2
13		1	3
04		0	4

Note. NO: 1a-contact NC: 1b-contact

6. LED lamp voltage

Code	Description	
N	Non-lighted	
С	24 VAC/VDC	

* Lighting color is red.

7. Others (Degree of Protection)

Code	Description	
None	IP65	
69K	IP69K *	

* IP69K is supported only by the Pull-reset models.

A22NE-PD

Note: For details on the accessories common to the screw terminal block types and push-in plus terminal block types, refer to "Common Accessories and Tools (Order Separately)" on page 51.

A22NE-PD

Application

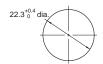

Mounting to the Panel

(1) Preparing the Panel

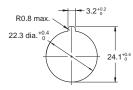

Panel hole dimension and panel thickness

· If outer surface treatment such as coating is performed for the panel, the panel dimensions after outer surface treatment must meet the specified panel dimensions

Panel hole dimension	Panel thickness	
22.3 dia.	1 to 5 mm	

When using a A22Z-3360 (Order Separately) Lock Ring

For 25-dia.

- · Use the A22Z-R25 (Order Separately) rubber ring.
- *Switches with an IP69K degree of protection do not support the 25-

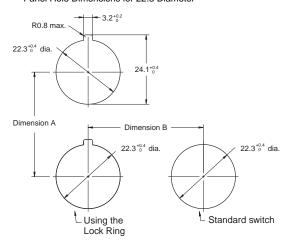

(2) Minimum mounting pitch (Dimension A, Dimension B)

Minimum mounting pitch

Type of operation unit	Dimension A (mm) min.	Dimension B (mm) min.
30-dia., 40-dia. models	50 * 1	50
60-dia. model	70	70

- *1. If the Switch Unit lock levers all face the same direction at the minimum mounting pitch, be sure to note the order the Switch Units are attached to the Operation Unit.
- *2. When using each accessory (Order Separately), set the A and B dimensions in view of the dimensions of the accessories.
- ***3.** Make sure the mounting pitch does not hinder the operation.

Panel Hole Dimensions for 22.3 Diameter

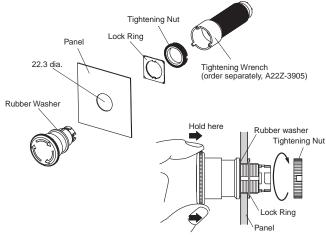

(3) Mounting the Operation Unit on the Panel

- · Do not tighten the Tightening Nut more than necessary using tools such as pointed-nose pliers.
- Doing so will damage the Tightening Nut. (The tightening torque of the Tightening Nut is 1.0 to 2.0 N·m.) Tightening Wrench: A22Z-3905

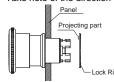

Panel Hole of 22.3-mm Diameter

 Insert the Operation Unit from the front of the panel, insert the Lock Ring and Tightening Nut from the back of the panel, and tighten the Tightening Nut. Before tightening, check that the rubber washer is present between the Operation Unit and the panel.

When the A22Z-3360 Lock Ring (Order Separately) is used

Take note of the direction when mounting the Lock Ring.

Panel Hole of 25-mm Diameter

• Insert the A22Z-R25 (Order Separately) between the Operation Unit and Panel, and tighten the Tightening Nut.

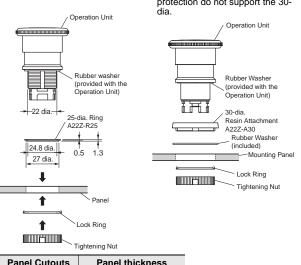

Before tightening, check that the rubber washer supplied with the Operation Unit is present between the Operation Unit and the 25-dia.

Panel Hole of 30-mm Diameter

 Insert the A22Z-A30 (Order Separately) between the Operation Unit and Panel, and tighten the Tightening Nut.

Before tightening, check that the supplied rubber washer is present between the Operation Unit and the panel, and between the 30-dia. Resin Attachment and the panel.

* Switches with an IP69K degree of protection do not support the 30-dia.

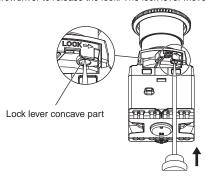

Panel thickness
1 to 5 mm
1 to 3 mm

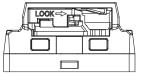

Removing the Switch Unit

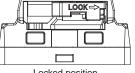

When the Switch Unit is to be Removed

Slowly push the release port (concave part) of the lock lever with a screwdriver to release the lock. The lock lever moves to the release position.

<Lock lever position>

Release position Locked position

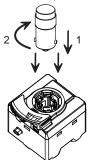

When the lock lever is at the released position in this Switch, the NO and NC contact operation is reversed.

Set the lock lever to the locked position when using the Switch.

Installing the LED Lamp (Lighted Models)

When the LED Lamp is to be Installed

Insert the protrusions on the LED Lamp into the guides on the Switch Unit in direction (1), and then turn the LED Lamp in direction (2) to lock it in place.

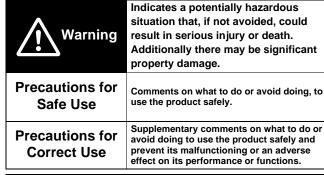

A22NE-PD

Safety Precautions

Be sure to read the precautions for All PushButton Switches in the website at: http://www.ia.omron.com/.

Indication and Meaning for Safe Use

⚠ WARNING

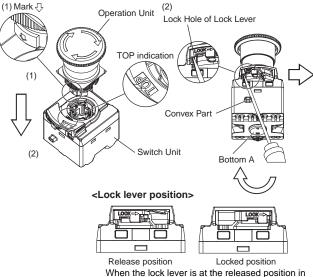

Do not perform wiring with power supplied to the Switch/ Indicator. Do not touch the terminals or other charged parts while power is being supplied. Doing so may result in electric shock.

Precautions for Safe Use

- Make sure the Operation Unit and the Switch Unit are properly assembled.
 - <Assembling the Operation Unit and Switch Unit>
 - (1) Assembling the Operation Unit and Switch Unit Align the TOP indication (the mark √) on the Operation Unit with the TOP indication on the Switch Unit, and insert the Operation Unit while keeping the bottom A pressed.
 - (2) Locking the lock lever

With a screwdriver inserted in the lock hole of the lock lever, bring the screwdriver in contact with the convex part of the case, and turn the lock lever until a clicking sound is heard.

When the lock lever is at the released position in this Switch, the NO and NC contact operation is reversed.

Set the lock lever to the locked position when using the Switch.

 When transition wiring is performed, make sure the switching current inside the Switch and the current based on the transition wiring is below the rated current of the Switch.
 If a current value higher than the rated current flows, it could result

If a current value higher than the rated current flows, it could result in emission of heat, or damage and deformation of the Switch, which could cause fire and locking of the contact, and thus a loss of safety.

- Do not disassemble or modify the Switch/Indicator under any circumstances.
- Doing so may prevent the Switch/Indicator from functioning to its full capability. Do not drop the Switch/Indicator. Do not apply pressure that may deform or alter the Switch/Indicator.
- The durability of the Switch varies considerably depending on the switching conditions. Always test the Switch/Indicator under actual working conditions before application and use the Switch/Indicator only for the number of switching operations allowed.
- Do not allow the load voltage and current to exceed the rated value. This may damage or burn out the Switch/Indicator.
- Do not use the Switch/Indicator in locations where explosive or flammable gases or liquid may be present or scattered. The electric ark or the heat caused by switching contacts may cause a fire or explosion.
- Do not use the Switch/Indicator in locations where toxic gases, such as H₂S, SO₂, NH₃, HNO₃, and Cl₂, may be present, or in locations subject to high temperature or humidity. Doing so may damage the Switch/Indicator due to contact failure or corrosion.
- Do not use the Switch/Indicator submersed in oil or water, or in locations continuously subject to splashes of oil or water. Doing so may result in oil or water entering and damaging the Switch/ Indicator.
- Do not use or keep the Switch/Indicator under the following conditions:
 - Subject to severe temperature changes.
 - Subject to high humidity or condensation.
 - Subject to severe vibration or shock.
 - Where direct rays of the sun strike.
 - Where sea breeze may be present.
- Make sure that a rubber washer is present between the Operation
 Unit and the panel. In models with IP69K, make sure the rubber
 bush of the Operation Unit is properly attached.
 Otherwise the specifications of the protective structure may not be
 - Otherwise, the specifications of the protective structure may not be satisfied.
- Do not apply excessive force to the Switch or wirings. Damage or deformation of the Switch Unit could result in an improper contact or a loss of safety.
- Use an appropriate wiring and crimp terminals (hereinafter, called ferrule terminals).
- Exercise caution to avoid wiring errors when connecting the terminals
- To prevent wiring materials from smoking or ignition, confirm wire ratings and use the wiring materials given in the following table.

Wire Type	Wire material	Recommended Wire	Wire coating peeling amount
Solid wire/ Stranded Wire	Copper	0.25 to 1.5 mm ² AWG 24 to 16	Ferrules used: 10 to 12 mm (Varies depending on the recommended ferrule conductor length) Ferrules not used: 8 mm

Use wiring crimp terminals and ferrule terminals of the specified size.

- After storing the product for a long time exceeding 1 year, perform, at a minimum, inspections of the operating characteristics, contact resistance, insulation resistance, and dielectric strength as well as evaluate the product under the working conditions.
- This product is intended for indoor use only. Using the product outdoors will result in failure.
- Do not wire anything to the release holes.
- Do not tilt or twist a flat-blade screwdriver while it is inserted into a release hole on the terminal block. The terminal block may be damaged.
- Insert a flat-blade screwdriver into the release holes at an angle.
 The terminal block may be damaged if you insert the screwdriver straight in.
- Do not allow the flat-blade screwdriver to fall out while it is inserted into a release hole.
- Do not bend a wire past its natural bending radius or pull on it with excessive force.

Doing so may cause the wire disconnection.

- Do not insert more than one wire into each terminal insertion hole.
- When mounting on a device with high airtightness, test operation in advance. There is a risk that the negative pressure will prevent the Operation Unit of from returning.
- Although the contacts of an A22NE-PD can be used with both the standard loads and microloads, once a contact has opened or closed under a load, you cannot again connect a small-capacity load. Doing so could roughen the contact surface, and result in loss of contact reliability.
- In the case of loads where an inrush current occurs when the contact is opened or closed, the durability may reduce due to extreme wear on the contacts.

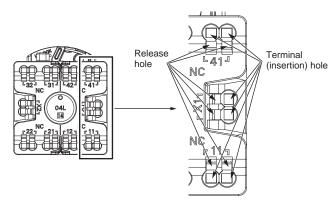

If necessary, insert a contact protection circuit.

 If a contact weld, the lock lever might not return to the release position, and contact inversion might not occur. In such a case, move the lock lever to the release position, and remove the Switch Unit from the Operation Unit.

Precautions for Correct Use

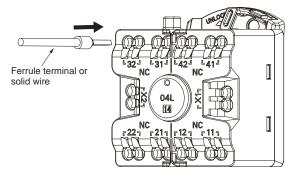

Wiring

1. Connecting Wires to the Push-In Plus Terminal Block Part Names of the Terminal Block

Connecting Wires with Ferrules and Solid Wires

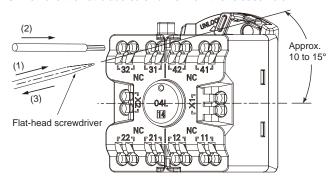

- Insert the solid wire or ferrule straight into the terminal block until the end strikes the terminal block.
- If a wire is difficult to connect because it is too thin, use a flat-blade screwdriver in the same way as when connecting stranded wires.

Connecting Stranded Wires

Use the following procedure to connect the wires to the terminal block.

- Hold a flat-blade screwdriver at an angle and insert it into the release hole. The angle should be appropriately 10 to 15°. If the flat-blade screwdriver is inserted correctly, you will feel the spring in the release hole.
- With the flat-blade screwdriver still inserted into the release hole, insert the wire into the terminal hole until the end strikes the terminal block.
- 3. Remove the flat-blade screwdriver from the release hole.

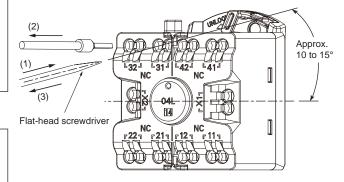

Checking Connections

- After the insertion, pull gently on the wire to make sure that it will not come off and it is securely fastened to the terminal block.
- If you use a ferrule with a conductor length of 10 mm, part of the conductor may be visible after the ferrule is inserted into the terminal block, but the product insulation distance will still be satisfied.

2. Removing Wires from the Push-In Plus Terminal Block

Use the following procedure to remove wires from the terminal block. The same method is used to remove stranded wires, solid wires, and ferrules.

- Hold a flat-blade screwdriver at an angle and insert it into the release hole. The angle should be appropriately 10 to 15°.
- With the flat-blade screwdriver still inserted into the release hole, remove the wire from the terminal insertion hole.
- 3. Remove the flat-blade screwdriver from the release hole.

3. Recommended Ferrules and Crimp Tools Coating peeling amount

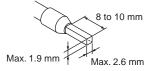

Recommend Wire Type	Stripping length (Ferrules not used)
0.25 to 1.5 mm ² /AWG 24 to AWG 16	8 mm

Recommended ferrules

Applie wi		Ferrule Stripping		Recom	mended ferrules		
(mm²)	(AWG)	length (mm)	(Ferrules not used)	Phoenix Contact product	Weidmuller product	Wago product	
0.25	24	8	10	AI 0, 25-8	H0.25/12	216-301	
0.23	24	10	12	AI 0, 25-10			
0.34	22	8	10	AI 0, 34-8	H0.34/12	216-302	
0.54	22	10	12	AI 0, 34-10			
0.5	20	8	10	AI 0, 5-8	H0.5/14	216-201	
0.5		10	12	AI 0, 5-10	H0.5/16	216-241

1.23/1.3	17/16	10	12	AI 1, 5-10	H1.5/16	216-244	
Recom	mended	Crimp Tool	s	CRIMPFOX6 CRIMPFOX6T-F CRIMPFOX10S	PZ6 roto	Variocri mp4	

Note: 1. Make sure that the outer diameter of the wire coating is smaller than the inner diameter of the insulation sleeve of the recommended ferrule.

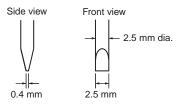

Make sure that the ferrule processing dimensions conform to the following figures.

Recommended Flat-Blade Screwdrivers

Use a flat-blade screwdriver to connect and remove wires.
Use one of the following flat-blade screwdrivers.

The following table shows manufacturers and models as of 2015/Dec.

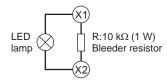

Model	Manufacture
ESD 0,40 × 2,5	Wera
SZS 0,4 × 2,5 SZF 0-0,4 × 2,5 *	Phoenix Contact
0.4 × 2.5 × 75 302	Wiha
AEF.2,5 × 75	Facom
210-719	Wago
SDI 0,4 × 2,5 × 75	Weidmuller

- ★ The SZF 0-0,4 x 2,5 (manufactured by Phoenix Contact) can be procured through an OMRON exclusive purchase form (XW4Z-00B).
- After wiring the Switch/Indicator, provide a sufficient insulation distance.

LED Lamps

- A current-limiting resistor is built in the LED lamp, so the installation of an external resistance is not required.
- Lighting malfunction of the LED lamp
 A micro-current of approximately 0.1 mA or less is sufficient to turn
 on the LED lamps. Take a countermeasure like adding a resistor to
 prevent mis-lighting in parallel to the LED lamp.
 The micro-current varies with the machine (leak current or stray
 capacity between cables, etc.). Select resistance value and

allowable power consumption that meet the actual current. (Example of lighting malfunction prevention circuit) When using a 24 VAC/DC Lighted Model

Be sure to read the "Safety Precautions" on page 56.

Emergency Stop Pushbutton Switches (22-dia. or 25-dia.) Push-in Plus Terminal Block Models

A22NE-P

Install in 22-dia. or 25-dia. Panel Cutout (When Using a Ring)

- The small size of the control panel is realized by conserving space and changing the direction of the wiring.
- Since there is no looseness in the wiring, there is a reduction in the maintenance efforts.
- A lock lever mechanism that can be easily operated is adopted.
- A maximum of up to six contact points can be combined together in the contact-point configuration.
- Oil-resistant to IP65 (non-lighted models) / IP65 (lighted models) / Supports IP69K high-temperature, high-pressure cleaning (pull-reset models).

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

 \triangle

Be sure to read the "Safety Precautions" on pages 33 and 56.

Model Number Structure

Application

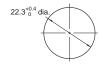

Mounting to the Panel

(1) Preparing the Panel

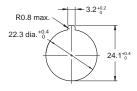

Panel hole dimension and panel thickness

 If outer surface treatment such as coating is performed for the panel, the panel dimensions after outer surface treatment must meet the specified panel dimensions.

Panel hole dimension	Panel thickness
22.3 dia.	1 to 5 mm

When using a A22Z-3360 (Order Separately) Lock Ring

For 25-dia.

- Use the A22Z-R25 (Order Separately) rubber ring.
- *Switches with an IP69K degree of protection do not support the 25dia.

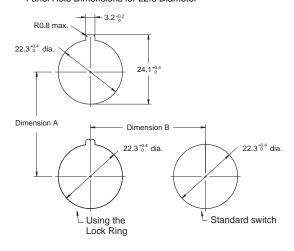

(2) Minimum mounting pitch (Dimension A, Dimension B)

Minimum mounting pitch

Dimension A (mm) min.	Dimension B (mm) min.	
50 * 1	50	
70	70	
	min. 50 * 1	

- *1. If the Mounting Collar lock levers all face the same direction at the minimum mounting pitch, be sure to note the order the mounting collars are attached to the Operation Unit.
- ***2.** When using each accessory (Order Separately), set the A and B dimensions in view of the dimensions of the accessories.
- ***3.** Make sure the mounting pitch does not hinder the operation.

Panel Hole Dimensions for 22.3 Diameter

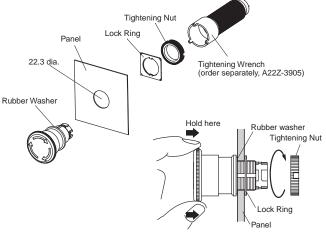

(3) Mounting the Operation Unit on the Panel

- Do not tighten the Tightening Nut more than necessary using tools such as pointed-nose pliers.
- Doing so will damage the Tightening Nut. (The tightening torque of the Tightening Nut is 1.0 to 2.0 N·m.) Tightening Wrench: A22Z-3905

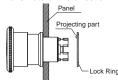

Panel Hole of 22.3-mm Diameter

 Insert the Operation Unit from the front of the panel, insert the Lock Ring and Tightening Nut from the back of the panel, and tighten the Tightening Nut. Before tightening, check that the rubber washer is present between the Operation Unit and the panel.

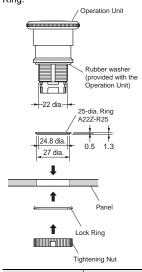

When the A22Z-3360 Lock Ring (Order Separately) is used

• Take note of the direction when mounting the Lock Ring.

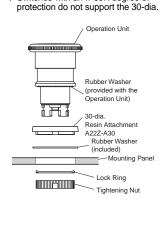

Panel Hole of 25-mm Diameter

 Insert the A22Z-R25 (Order Separately) between the Operation Unit and Panel, and tighten the Tightening Nut.
 Before tightening, check that the rubber washer supplied with the Operation Unit is present between the Operation Unit and the 25-dia.
 Ring.

Panel Hole of 30-mm Diameter

- Insert the A22Z-A30 (Order Separately) between the Operation Unit and Panel, and tighten the Tightening Nut.
 Before tightening, check that the supplied rubber washer is present between the Operation Unit and
- the panel, and between the 30-dia.
 Resin Attachment and the panel.
 * Switches with an IP69K degree of

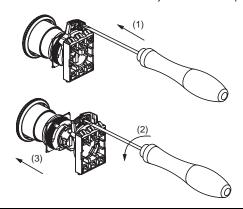

Panel Cutouts	Panel thickness
25 mm dia.	1 to 5 mm
30 mm dia.	1 to 3 mm

Removing the Mounting Latch

When the Mounting Latch is to be Removed

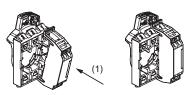

• Press the lock lever in from the back side to release the lock, and then hook the Mounting Collar with a screwdriver, move it in the direction indicated at (2), and remove it. Turn the lever all of the way until it clicks into place.

Switch Blocks and Lighting Unit

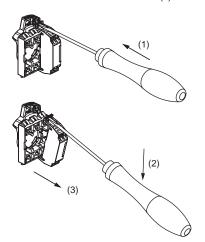

(1) Installing the Switch Blocks and Lighting Unit

Catch the projection on the opposite side of the Mounting Collar from the lever side and press the Switch Block in the direction indicated at (1).

(2) Removing the Switch Blocks and Lighting Units

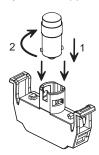

• Insert a screwdriver into the gap between the Mounting Collar and Switch Block and press it inward in the direction shown at (2).

Attaching the LED Lamp to the Lighting Unit

When the LED Lamp is to be Installed

• Insert the protrusions on the LED Lamp into the guides on the Lighting Unit and then turn the LED Lamp in direction (2) to lock it in place.

Control Box

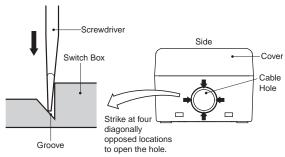

(1) Mounting the Switch

Mount the Switch in the same way as for a standard panel. The tightening torque of the Box screws is 1.4 to 2.0 N·m.

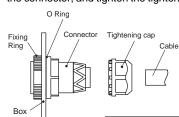

(2) Creating a Cable Hole

To open a cable hole, leave the cover attached, place the tip of a screwdriver in the grooves at four locations around the cable hole, and strike the screwdriver with a hammer to open the hole.

(3) Securing the Connector Cable

- 1. Insert the connector into the cable port hole in the Box and secure with the fixing ring inside the box.
- 2. Pass the tightening cap through the cable, insert the cable into the connector, and tighten the tightening cap to secure the cable.

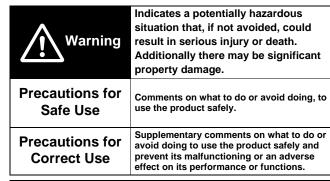

Cable diameter (mm)	Connector
7 to 9 dia.	A22Z-3500-1
9 to 11 dia.	A22Z-3500-2

Safety Precautions

Be sure to read the precautions for All PushButton Switches in the website at: http://www.ia.omron.com/.

Indication and Meaning for Safe Use

↑ WARNING

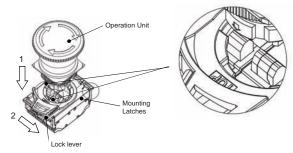

Do not perform wiring with power supplied to the Switch/ Indicator. Do not touch the terminals or other charged parts while power is being supplied. Doing so may result in electric shock.

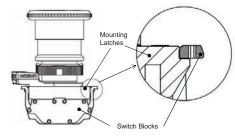

Precautions for Safe Use

 If the Operation Unit is separated from the Switch Units, the equipment will not stop, resulting in a hazardous situation.
 Make sure the Operation Unit, Mounting Latches, and the Switch Units are properly assembled.

<Assembling the Operation Unit and the Mounting Latches> Align the TOP indication (the mark) on the Operation Unit with the TOP indication on the Mounting Latches to fit it properly, and turn the lock lever on the Mounting Latch in the direction shown in the figure below until a clicking sound is heard.

<Assembling the Mounting Latches and Switch Blocks> Make sure the hooking part (convex part) on the Mounting Latches is perfectly latched into the hooking part (concave part) on the Switch Block.

- When transition wiring is performed, make sure the switching current inside the Switch and the current based on the transition wiring is below the rated current of the Switch.
 If a current value higher than the rated current flows, it could result in emission of heat, or damage and deformation of the Switch.
- in emission of heat, or damage and deformation of the Switch, which could cause fire and locking of the contact, and thus a loss of safety.
- Do not disassemble or modify the Switch/Indicator under any circumstances.

- Doing so may prevent the Switch/Indicator from functioning to its full capability. Do not drop the Switch/Indicator. Do not apply pressure that may deform or alter the Switch/Indicator.
- The durability of the Switch varies considerably depending on the switching conditions. Always test the Switch/Indicator under actual working conditions before application and use the Switch/Indicator only for the number of switching operations allowed.
- Do not allow the load voltage and current to exceed the rated value. This may damage or burn out the Switch/Indicator.
- Do not use the Switch/Indicator in locations where explosive or flammable gases or liquid may be present or scattered. The electric ark or the heat caused by switching contacts may cause a fire or explosion.
- Do not use the Switch/Indicator in locations where toxic gases, such as H₂S, SO₂, NH₃, HNO₃, and Cl₂, may be present, or in locations subject to high temperature or humidity. Doing so may damage the Switch/Indicator due to contact failure or corrosion.
- Do not use the Switch/Indicator submersed in oil or water, or in locations continuously subject to splashes of oil or water. Doing so may result in oil or water entering and damaging the Switch/ Indicator.
- Do not use or keep the Switch/Indicator under the following conditions:
 - Subject to severe temperature changes.
 - Subject to high humidity or condensation.
 - · Subject to severe vibration or shock.
 - Where direct rays of the sun strike.
 - Where sea breeze may be present.
- Make sure that a rubber washer is present between the Operation Unit and the panel. In models with IP69K, make sure the rubber bush of the Operation Unit is properly attached.
 - Otherwise, the specifications of the protective structure may not be satisfied.
- Do not apply excessive force to the Switch or wirings. Damage or deformation of the Switch Block could cause an improper contact or a loss of safety.
- Use an appropriate wiring and crimp terminals (hereinafter, called ferrule terminals).
- Exercise caution to avoid wiring errors when connecting the terminals
- To prevent wiring materials from smoking or ignition, confirm wire ratings and use the wiring materials given in the following table.

Wire Type	Wire	Recommended	Wire coating peeling
	material	Wire	amount
Solid wire/ Stranded Wire	Copper	0.25 to 1.5 mm ² AWG 24 to 16	Ferrules used: 10 to 12 mm (Varies depending on the recommended ferrule conductor length) Ferrules not used: 8 mm

Use wiring crimp terminals and ferrule terminals of the specified

- After storing the product for a long time exceeding 1 year, perform, at a minimum, inspections of the operating characteristics, contact resistance, insulation resistance, and dielectric strength as well as evaluate the product under the working conditions.
- This Switch/Indicator is intended for indoor use only.
 Using the Switch/Indicator outdoors may result in failure.
- Do not wire anything to the release holes.
- Do not tilt or twist a flat-blade screwdriver while it is inserted into a release hole on the terminal block. The terminal block may be damaged.
- Insert a flat-blade screwdriver into the release holes at an angle.
 The terminal block may be damaged if you insert the screwdriver straight in.
- Do not allow the flat-blade screwdriver to fall out while it is inserted into a release hole.
- Do not bend a wire past its natural bending radius or pull on it with excessive force.
 - Doing so may cause the wire disconnection.

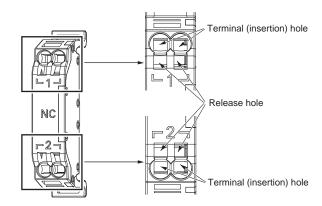

- Do not insert more than one wire into each terminal insertion hole.
- Do not mount A22N-P or A22NE-P Push-In Plus terminal switch blocks on A22N screw terminal blocks. Doing so may result in unsatisfactory performance.
- When mounting on a device with high airtightness, test operation in advance. There is a risk that the negative pressure will prevent the Operation Unit of from returning.
- In the case of loads where an inrush current occurs when the contact is opened or closed, the durability may reduce due to extreme wear on the contacts.

If necessary, insert a contact protection circuit.

Precautions for Correct Use

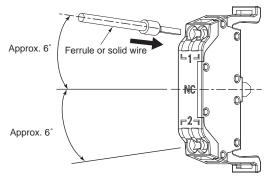

Wiring

1. Connecting Wires to the Push-In Plus Terminal Block Part Names of the Terminal Block

Connecting Wires with Ferrules and Solid Wires

- Insert the solid wire or ferrule straight into the terminal block until the end strikes the terminal block. The angle should be approximately 6°.
- If a wire is difficult to connect because it is too thin, use a flat-blade screwdriver in the same way as when connecting stranded wires.

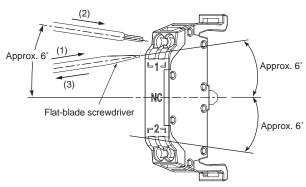

The wiring for the Lighting Unit and Switch Block (2 contacts) are the same as for the Switch Block (1 contact) shown in the above illustra-

OMRON

Connecting Stranded Wires

Use the following procedure to connect the wires to the terminal block.

- Hold a flat-blade screwdriver at an angle and insert it into the release hole.
 - The angle should be approximately 6°. If the flat-blade screwdriver is inserted correctly, you will feel the spring in the release hole.
- With the flat-blade screwdriver still inserted into the release hole, insert the wire into the terminal hole until the end strikes the terminal block.
- 3. Remove the flat-blade screwdriver from the release hole.

The wiring and screwdriver angles for the Lighting Unit and Switch Block (2 contacts) are the same as for the Switch Block (1 contact) shown in the above illustration.

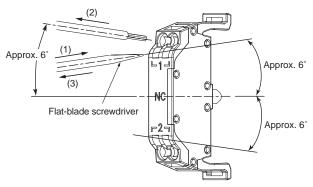

Checking Connections

- After the insertion, pull gently on the wire to make sure that it will not come off and it is securely fastened to the terminal block.
- If you use a ferrule with a conductor length of 10 mm, part of the conductor may be visible after the ferrule is inserted into the terminal block, but the product insulation distance will still be satisfied.

2. Removing Wires from the Push-In Plus Terminal Block

Use the following procedure to remove wires from the terminal block. The same method is used to remove stranded wires, solid wires, and ferrules.

- Hold a flat-blade screwdriver at an angle and insert it into the release hole. The angle should be approximately 6°.
- With the flat-blade screwdriver still inserted into the release hole, remove the wire from the terminal insertion hole.
- 3. Remove the flat-blade screwdriver from the release hole.

The wiring and screwdriver angles for the Lighting Unit and Switch Block (2 contacts) are the same as for the Switch Block (1 contact) shown in the above illustration.

3. Recommended Ferrules and Crimp Tools Coating peeling amount

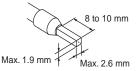

Recommend Wire Type	Stripping length (Ferrules not used)	
0.25 to 1.5 mm ² /AWG 24 to AWG 16	8 mm	

Recommended ferrules

Applicable wire Ferrule conductor		Stripping	Recommended ferrules			
(mm²)	(AWG)	length (mm)	length (mm) (Ferrules not used)	Phoenix Contact product	Weidmuller product	Wago product
0.25	24	8	10	AI 0, 25-8	H0.25/12	216-301
0.23	24	10	12	AI 0, 25-10		
0.34	22	8	10	AI 0, 34-8	H0.34/12	216-302
0.54	22	10	12	AI 0, 34-10		
0.5	20	8	10	AI 0, 5-8	H0.5/14	216-201

Recom	Recommended Crimp Tools		CRIMPFOX6 CRIMPFOX6T-F CRIMPFOX10S	PZ6 roto	Variocri mp4	

Note: 1. Make sure that the outer diameter of the wire coating is smaller than the inner diameter of the insulation sleeve of the recommended ferrule.

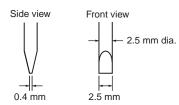

2. Make sure that the ferrule processing dimensions conform to the following figures.

Recommended Flat-Blade Screwdrivers

Use a flat-blade screwdriver to connect and remove wires. Use one of the following flat-blade screwdrivers.

The following table shows manufacturers and models as of 2015/Dec. $\label{eq:control}$

Model	Manufacture
ESD 0,40 × 2,5	Wera
SZS 0,4 × 2,5 SZF 0-0,4 × 2,5 *	Phoenix Contact
0.4 × 2.5 × 75 302	Wiha
AEF.2,5 × 75	Facom
210-719	Wago
SDI 0,4 × 2,5 × 75	Weidmuller

- *The SZF 0-0,4 x 2,5 (manufactured by Phoenix Contact) can be procured through an OMRON exclusive purchase form (XW4Z-00B).
- After wiring the Switch/Indicator, provide a sufficient insulation distance.

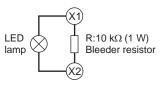

LED Lamps

- A current-limiting resistor is built in the LED lamp, so the installation of an external resistance is not required.
- Lighting malfunction of the LED lamp

A micro-current of approximately 0.1 mA or less is sufficient to turn on the LED lamps. Take a countermeasure like adding a resistor to prevent mis-lighting in parallel to the LED lamp.

The micro-current varies with the machine (leak current or stray capacity between cables, etc.). Select resistance value and allowable power consumption that meet the actual current.

(Example of lighting malfunction prevention circuit) When using a 24-VAC/VDC lighted unit

Be sure to read the "Safety Precautions" on page 56.

OMRON

Emergency Stop Pushbutton Switches (22-dia. or 25-dia.) Screw Terminal Block types

A22E

Install in 22-dia. or 25-dia. Panel Cutout

(When Using a Ring)

- Increase wiring efficiency with three-row mounting of Switch Units. (with non-lighted Switch Blocks, three Units can be mounted for multiple contacts).
- Mounted using either open-type (fork-type) or closed-type (round-type) crimp terminals.
- Oil-resistant to IP65 (non-lighted models) / IP65 (lighted models).
- A lock plate is provided as a standard feature to ensure that the control box and switch are not easily separated.

Be sure to read the "Safety Precautions" on pages 50 and 56.

A22E

Installation

Mounting to the Panel

(1) Preparing the Panel

- The panel dimensions are shown below.
- The panel thickness must be 1 to 5 mm.

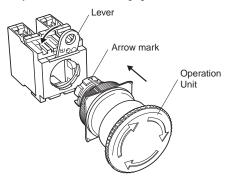

With Lock Ring

Without Lock Ring

- Always use a 25-mm-dia. A22Z-R25 Lock Ring for a 25-mm-dia. hole.
 IP65 degree of protection will be lost if the 25-mm-dia. Lock Ring is not used because of the larger size of a 25-mm-dia. hole.
- When painting or coating the panel, make sure that the specified panel dimensions apply to the panel after painting or coating.

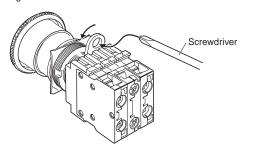

(3) Mounting the Switch on the Operation Unit

 Insert the Operation Unit into the Switch Unit, aligning the arrow mark inscribed on the Case with the lever on the Switch Blocks, then move the lever in the direction indicated by the arrow in the following figure.

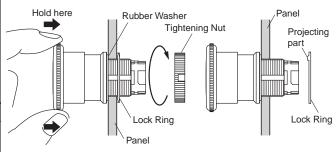

(4) Removing the Switch

 Move the lever in the direction indicated by the arrow in the following figure, then pull the Operation Unit or the Switch Blocks.
 Since the lever has a hole with an inside diameter of 6.5 mm, the lever can be moved in the specified direction by inserting a screwdriver into the hole and then moving the screwdriver.

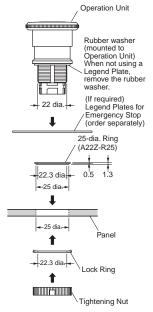

(2) Mounting the Operation Unit on the Panel

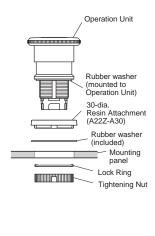

- Insert the Operation Unit from the front surface of the panel, insert the Lock Ring and the Tightening Nut from the terminal side, then tighten the Ring. Before tightening, check that the rubber washer is present between the Operation Unit and the panel.
- Align the Lock Ring with the groove in the casing, then insert the Lock Ring so that its edge is located on the panel side.
- Tighten the Tightening Nut at a torque of 1.0 to 2.0 N⋅m.
- When using a Lock Ring, replace with the supplied Lock Ring, insert the projecting part into the lock slot, and then tighten the Tightening Nut.

 When the panel cutout dimension is 25 dia., remove the supplied rubber washer and mount the 25-dia. Ring as shown below. (Since the A22Z-R25 is not attached to the main body, order separately.) When using a Legend Plate (Order Separately), do not remove the rubber washer.

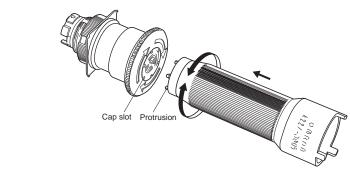

Assembling the Cap

Emergency Stop Switch

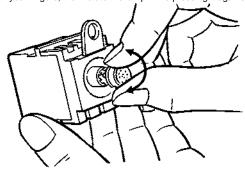

• Insert the protrusion of the Tightening Wrench (A22Z-3905) into the Cap slot and then turn to remove the Cap.

Installing/Replacing the LED Lamp

Installing/Replacing on the Switch

• Grip the lamp with your fingers, then rotate the lamp while pressing it against the Switch.

Control Box (Enclosure)

as for an ordinary panel.

(1) Mounting the Switch The Standard-size Legend Plate Frame can

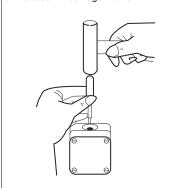

be mounted. Mount the Frame as shown in the following diagram. Mount the Switch in the same way

Place the tip of a screwdriver on the surface where the cable port hole is to be created with the cover attached and strike the screwdriver to punch a hole.

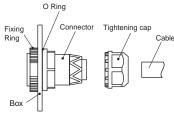

(2) Creating a Cable Port Hole

Attempts to punch a hole on the other side of the case will damage the Box.

(3) Securing the Connector Cable

- Insert the connector into the cable port hole in the Box and secure with the Mounting Ring inside the box.
 Pass the tightening cap through the cable, insert the cable into the
- Pass the tightening cap through the cable, insert the cable into the connector, and tighten the tightening cap to secure the cable.

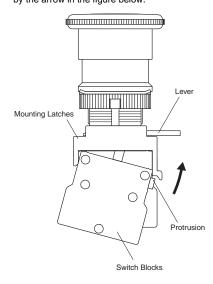

Cable diameter (mm)	Connector
7 to 9 dia.	A22Z-3500-1
9 to 11 dia.	A22Z-3500-2

Installing/Removing the Switch Blocks

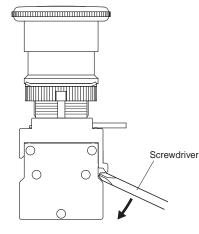

(1) Installing the Switch Blocks

 Hook the small protrusion on the Mounting Latch into the groove on the other side of the lever, then push up the Switch Block in the direction indicated by the arrow in the figure below.

(2) Removing the Switch Blocks

 Insert a screwdriver between the Mounting Latch and the Switch Block, then push down the screwdriver in the direction indicated by the arrow in the following figure.

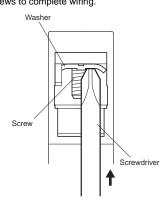

Use either of the following screwdrivers.

Wiring

Wiring Round Crimp Terminals

 Loosen the terminal screw from the Switch Unit until it completely comes off the groove, insert a screwdriver as shown in the following figure, then push up the washer in the direction indicated by the arrow to temporarily secure it.

Now, a round crimp terminal can be connected. After inserting the terminal, tighten the screws to complete wiring.

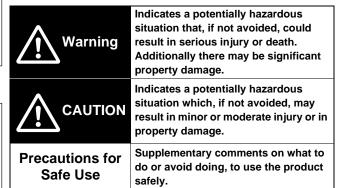

A22E

Safety Precautions

Be sure to read the precautions for All PushButton Switches in the website at:http://www.ia.omron.com/.

Indication and Meaning for Safe Use

WARNING

Do not perform wiring with power supplied to the Switch/ Indicator. Do not touch the terminals or other charged parts while power is being supplied. Doing so may result in electric shock.

Caution

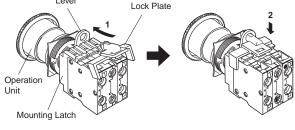

If the Operation Unit is separated from the Socket Unit, the equipment will not stop, creating a hazardous condition. Secure the lever on the Socket Unit by using the A22Z-3380 Lock Plate so that the Operation Unit cannot be easily separated from the Socket Unit. (Refer to "Mounting the Lock Plate" at the below.)

Precautions for Correct Use

Mounting the Lock Plate

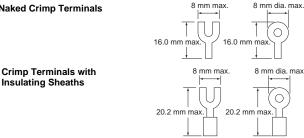

- 1. Confirm that the lever on the Mounting Latch is on the side where the Operation Unit is secured and then insert the protrusion on the Lock Plate into the hole in the lever on the Mounting Latch.
- 2. Press the hole on the Lock Plate onto the protrusion on the Mounting Latch until it clicks into place.

Wiring

- · Terminal screws must be Phillips or slotted M3.5 screws with a square washer.
- The tightening torque is 1.08 to 1.27 N⋅m.
- Single wires, stranded wires, and crimp terminals can be connected to the Switch.
- · Applicable Wiring Materials: Twisted strands: 2 mm² max. Solid wire: 1.6 mm dia. max.

Naked Crimp Terminals

· After wiring the Switch, maintain an appropriate clearance and creepage distance.

LED Lamps

- The LED current-limiting resistor is built-in, so internal resistance is not required.
- If commercially available LEDs are used, select the ones that meet the following conditions:

Base: BA9S/13

Overall length: 26 mm max.

Power consumption: 2.6 W max.

When DC-specific LEDs are used, wire the Switch so that the X1 terminal is positive.

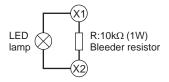

Mis-lighting of the LED

The LED lights with approx. 0.1 mA or less of micro-current. Take a countermeasure like adding a resistor to prevent mis-lighting in parallel to the LED.

The micro-current varies with the machine (leak current or stray capacity between cables, etc.). Select resistance value and allowable power consumption that meet the actual current.

(Circuit example)

In case of using 24 VAC/VDC, Direct lighting

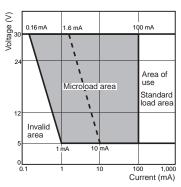

· Do not use a lamp that does not satisfy the rating.

Using the Microload

Contact failure may occur if a Switch designed for a standard load is used to switch a microload. Use Switches within the application ranges shown in the following graph. Even within the application range, insert a contact protection circuit, if necessary, to prevent the reduction of life expectancy due to extreme wear on the contacts caused by loads where inrush current occurs when the contact is opened and closed.

The minimum applicable load is the N-level reference value. This value indicates the malfunction reference level for the reliability level of 60% (λ 60) (conforming to JIS C5003).

The equation, $\lambda_{60} = 0.5 \times 10^{-6}$ /time indicates that the estimated malfunction rate is less than 1/2,000,000 with a reliability level of 60%.

Be sure to read the "Safety Precautions" on page 56.

Safety Precautions

Be sure to read the precautions for All PushButton Switches in the website at:http://www.ia.omron.com/.

Indication and Meaning for Safe Use

Precautions for Safe Use

Supplementary comments on what to do or avoid doing, to use the product safely.

Precautions for Correct Use

Mounting

- · Always make sure that the power is turned OFF before wiring the Switch. Also, do not touch the terminals or other current-carrying ports while power is being supplied. Electric shock may occur.
- · Do not tighten the tightening nut more than necessary by using tools such as pointed-nose pliers. Doing so could damage the tightening nut. (The tightening torque is 1.0 to 2.0 N-m.)
- · Recommended panel thickness: 1 to 5 mm.
- When mounting the caps after changing the LED or the caps, tighten the caps at a tightening torque of 0.49 to 0.78 N·m.

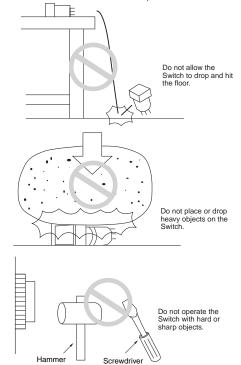

Operating Environment

- This model is designed with a protective structure so that it will not sustain damage if it is subjected to water from any direction to the front of the panel.
- The Switch is intended for indoor use only. Using the Switch outdoor may cause it to fail.

- If the panel is to be coated, make sure that the panel meets the specified dimensions after coating.
- · Due to the structure of the Switch, severe shock or vibration may cause malfunctions or damage to the Switch.

Also, most Switches are made from resin and will be damaged if they come into contact with sharp objects. Particularly scratches on the Operation Unit may create visual and operational obtrusions.

Handle the Switches with care, and do not throw or drop them.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

Note: Do not use this document to operate the Unit.
