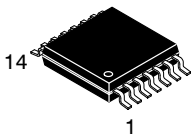
Dual D-Type Flip-Flop with Preset and Clear

74VHC74



TSSOP-14 WB
CASE 948G

General Description

The VHC74 is an advanced high speed CMOS Dual D-Type Flip-Flop fabricated with silicon gate CMOS technology. It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation. The signal level applied to the D input is transferred to the Q output during the positive going transition of the CK pulse. $\overline{CLR}$ and $\overline{PR}$ are independent of the CK and are accomplished by setting the appropriate input LOW.

An input protection circuit ensures that 0 V to 5.5 V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5 V to 3 V systems and two supply systems such as battery backup. This circuit prevents device destruction due to mismatched supply and input voltages.

Features

- High Speed: f_{MAX} = 170 MHz (Typ.) at T_A = 25 °C
- High Noise Immunity: $V_{NIH} = V_{NIL}$ = 28% V_{CC} (Min.)
- Power Down Protection is Provided on All Inputs
- Low Power Dissipation: I_{CC} = 2 μA (Max.) at T_A = 25 °C
- Pin and Function Compatible with 74HC74
- Pb-Free, Halogen Free/BFR Free and RoHS Compliant
